U Series

The U series is designed to meet the RFI needs created by power factor corrected power supplies. This high performance filter offers a high impedance circuit to mismatch the power supply's impedance characteristics. The economical design allows superior performance at a reasonable price.

The PC board mountable version has a low profile case which adapts well to most modular power converter applications.

All models meet low leakage current requirements of VDE portable equipment, and (120 Volt) UL544 and UL2601 non-patient medical equipment.
