**QUAD DIFFERENTIAL LINE RECEIVERS ALSO AVAILABLE
GUARANTEED TO 100K RAD(Si) TESTED TO MIL-STD-883,
METHOD 1019.5, CONDITION A**

General Description

The DS26F32 is a quad differential line receiver designed to meet the requirements of EIA Standards RS-422 and RS-423, and Federal Standards 1020 and 1030 for balanced and unbalanced digital data transmission.

The DS26F32 offers improved performance due to the use of state-of-the-art L-FAST bipolar technology. The L-FAST technology allows for higher speeds and lower currents by utilizing extremely short gate delay times.

The device features an input sensitivity of 200mV over the input common mode range of $\pm 7.0V$. The DS26F32 provides an enable function common to all four receivers and TRI-STATE outputs with 8.0 mA sink capability. Also, a fail-safe input/output relationship keeps the outputs high when the inputs are open.

The DS26F32 offers optimum performance when used with the DS26F31 Quad Differential Line Driver.

Features

- Military temperature range
- Input voltage range of $\pm 7.0V$ (differential or common mode) $\pm 0.2V$ sensitivity over the input voltage range.
- High input impedance
- Operation from single +5.0V supply
- Input pull-down resistor prevents output oscillation on unused channels
- TRI-STATE outputs, with choice of complementary enables, for receiving directly on a data bus

Electrical Characteristics

DC PARAMETERS - DRIFT VALUES

(The following conditions apply to all the following parameters, unless otherwise specified.)
 DC: NOTE: This section applies to -QMLV devices only and shall be read & recorded at TA = +25C before and after each burn-in and shall not change by more than the limits indicated. The delta rejects shall be included in the PDA calculation.

SYMBOL	PARAMETER	CONDITIONS	NOTES	PIN-NAME	MIN	MAX	UNIT	SUB-GROUPS
Voh	Logical "1" Output Voltage	Vcc = 4.5V, Ioh = -440uA, Delta Vin = 1V, Ven = 0.8V = Ven			-250	250	mV	1
Vol	Logical "0" Output Voltage	Vcc = 4.5V, Iol = 4mA, Delta Vin = -1V, Ven = 0.8V = Ven			-45	45	mV	1
		Vcc = 4.5V, Iol = 8mA, Delta Vin = -1V, Ven = 0.8V = Ven			-45	45	mV	1
Iin	Input Current	Vcc = 4.5V, Vin=15V (Pin under test), other inputs -15V <= Vin <= +15V			-0.28	0.28	mA	1
		Vcc = 5.5V, Vin=-15V (Pin under test), other inputs -15V <= Vin <= +15V			-0.28	0.28	mA	1

Note 1: Power dissipation must be externally controlled at elevated temperatures.

Note 2: Parameter tested go-no-go only.

Note 3: Tested at 50pF guarantees limit at 15 & 5pF.

Note 4: Tested at 50pF, system capacitance exceeds 5 to 15pF.

Note 5: Pre and post irradiation limits are identical to those listed under AC and DC electrical characteristics. These parts may be dose rate sensitive in a space environment and demonstrate enhanced low dose rate effect. Radiation end point limits for the noted parameters are guaranteed only for the conditions as specified in MIL-STD-883, Method 1019.5, Condition A.
