

ICS671-01 Zero Delay, Low Skew Buffer and Multiplier

Description

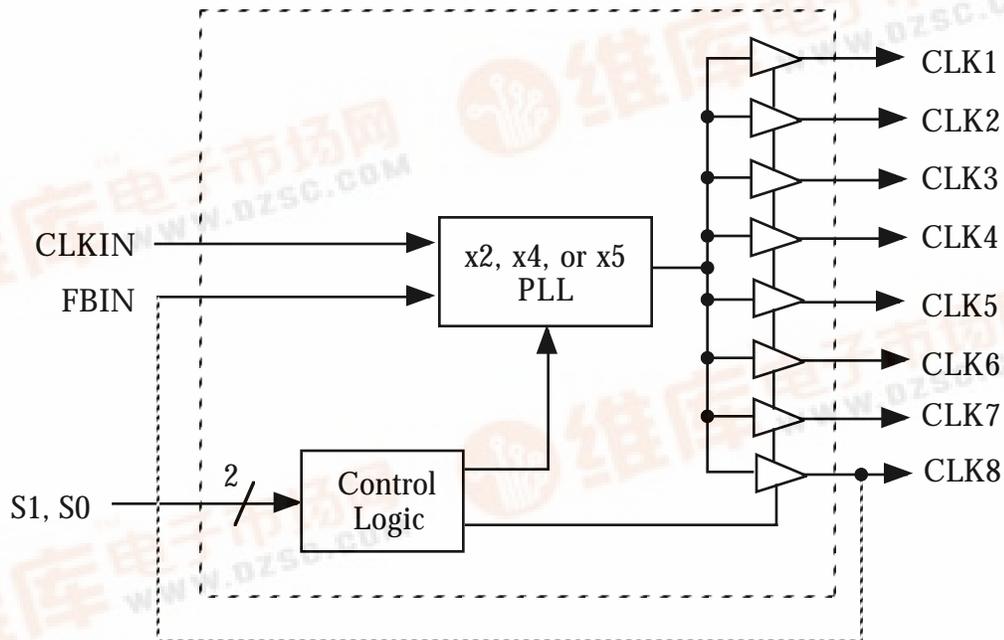

The ICS671-01 is a low phase noise, high speed PLL based, 8 output, low skew zero delay buffer and multiplier. Based on ICS's proprietary low jitter Phase Locked Loop (PLL) techniques, the device provides eight low skew outputs at speeds up to 160 MHz at 3.3 V. The ICS671-01 includes a bank of six outputs running at either x2 or x4 mode, one output running at either x2, x4, or x5 mode, and one more output running at either x1, x2, or x4 mode. For normal operation, output clock CLK8 is tied to the FBIN pin.

ICS manufactures the largest variety of clock generators and buffers, and is the largest clock supplier in the world.

Features

- Packaged in 16 pin narrow SOIC 
- Clock outputs from 5 to 160 MHz

Pin Descriptions

Number	Name	Type	Description
1	CLKIN	I	Clock Input.
2, 3, 6, 7, 10, 11	CLK1:6	O	Clock Outputs 1:6. See above table.
4, 13	VDD	P	Power supply. Connect both pins to same voltage (either 3.3 V or 5 V).
5, 12	GND	P	Connect to ground.
8	S0	I	Select input 0. See table above.
9	S1	I	Select input 1. See table above.
14	CLK7	I	Clock Output 7. See table above.
15	CLK8	I	Clock Output 8. See table above. Normally use this clock as feedback.
16	FBIN	I	Feedback Input. Connect to CLK8 under normal operations.

Key: I = Input; O = output; P = power supply connection.

External Components

The ICS671-01 requires a minimum number of external components for proper operation. Decoupling capacitors of 0.01µF should be connected between VDD and GND on pins 4 and 5, and VDD and GND on pins 13 and 12, as close to the device as possible. A series termination resistor of 33 Ω may be used close to each clock output pin to reduce reflections.
