

## Hex D Master-Slave Flip-Flop

The MC10H176 contains six master slave type D flip-flops with a common clock. This MECL 10H part is a functional/pinout duplication of the standard MECL 10K family part, with 100% improvement in clock frequency and propagation delay and no increase in power-supply current.

- Propagation Delay, 1.7 ns Typical
- Power Dissipation, 460 mW Typical
- Improved Noise Margin 150 mV (Over Operating Voltage and Temperature Range)
- Voltage Compensated
- MECL 10K-Compatible

#### NOTE:

Each MECL 10H series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50-ohm resistor to -2.0 volts.

## APPLICATION INFORMATION

The MC10H176 contains six high-speed, master slave type "D" flip-flops. Data is entered into the master when the clock is low. Master-to-slave data transfer takes place on the positive-going Clock transition. Thus,

outputs may change only on a positive-going Clock transition. A change in the information present at the data (D) input will not affect the output information any other time due to the master-slave construction of this device.
