SIP industrial generators

# Medusa

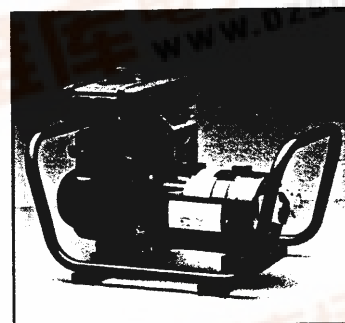

generator

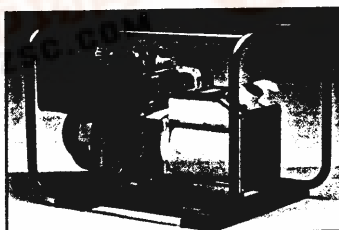

SIP's Medusa Briggs & Stratton range of petrol powered industrial generators are very robust, highly portable, frame mounted and provide reliable and independent power wherever its needed. Alternators used are self exciting heavy duty, maintenance free, highly reliable, brushless (115 / 230V) units fitted with twin outlet sockets and overload protection.

Engines used are Briggs & Stratton new Industrial Plus or Vanguard units. Both ranges boast electronic ignition and low oil shutdown. All meet strict EEC noise and safety regulations. The Industrial Plus range feature easy one pull first time starting, large fuel tank and air cleaner. Cast iron cylinder sleeve ensures longer life.

The Vanguard engines are Japanese built OHV units featuring a 2 year warranty. They are constructed to run all day, every day under the most demanding conditions with low fuel consumption. Other design features include: Cast iron cylinder sleeve, large fuel tank and air cleaner (for longer life), up to 25% less noise, 19% more torque and 11% more horse power than competitive models.
