Pin Description

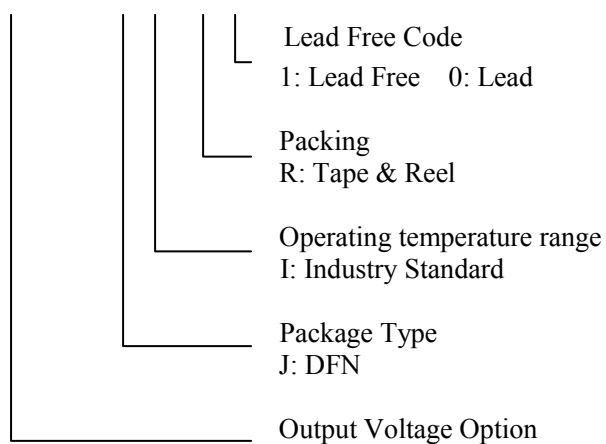

PIN	Pin	DESCRIPTION
V <sub>IN</sub>	1	Input voltage of the LDO
EN1	2	Enable input to regulator 1
EN2	3	Enable input logic, enable high
BYPASS	4	Optional bypass capacitor for noise reduction
GND	5	Ground
NC	6	No connection
V <sub>OUT2</sub>	7	Output of regulator 2: 300mA output current
V <sub>OUT1</sub>	8	Output of regulator 1: 150mA output current

## Ordering Information

**Absolute Maximum Ratings**

- $V_{IN}, V_{EN}$  ----- -0.3V to 6V
- Power Dissipation ( $P_D$ ) ----- Internally Limited
- Junction Temperature ----- -40°C to +125°C
- Storage Temperature ----- -65°C to +150°C
- Lead Temp ----- 260°C

**Operating Ratings**

- $V_{IN}$  ----- 2.5 to 5.5V
- $V_{EN}$  ----- 0V to  $V_{IN}$
- Junction Temperature ----- -40°C to +125°C
- Thermal Resistance  $\theta_{JA}$ (DFN-8) ----- 60°C/W

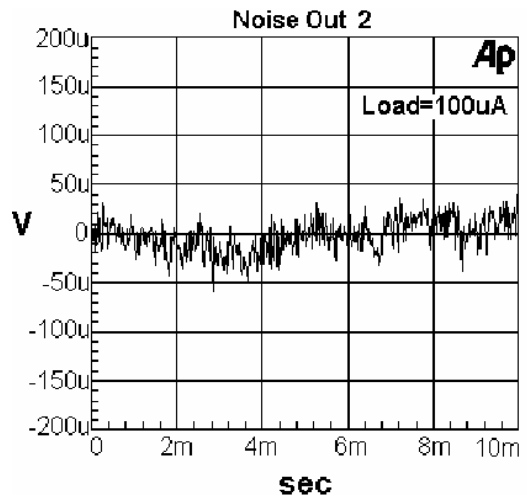

**Electrical Characteristics**

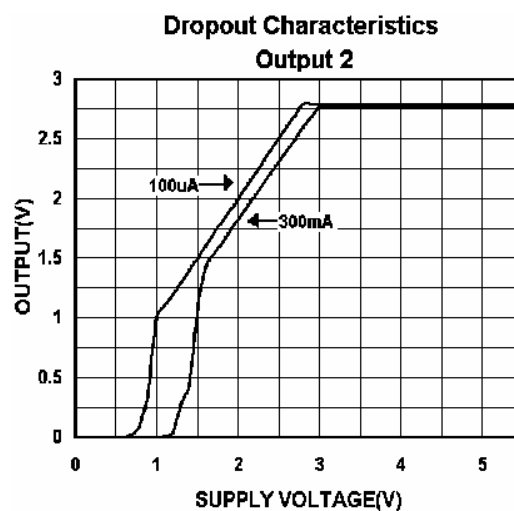

$V_{IN} = V_{OUT} + 1.0V$ ,  $I_{OUT} = 1mA$ ,  $C_{OUT} = 1\mu F$ . Typical values and limits appearing in standard typeface are for  $T_J = 25^\circ C$

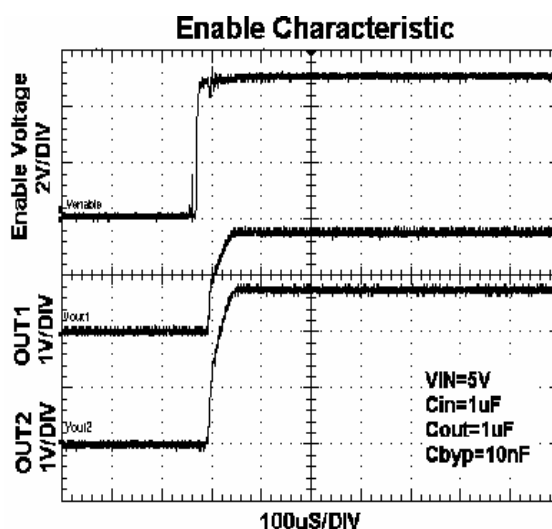

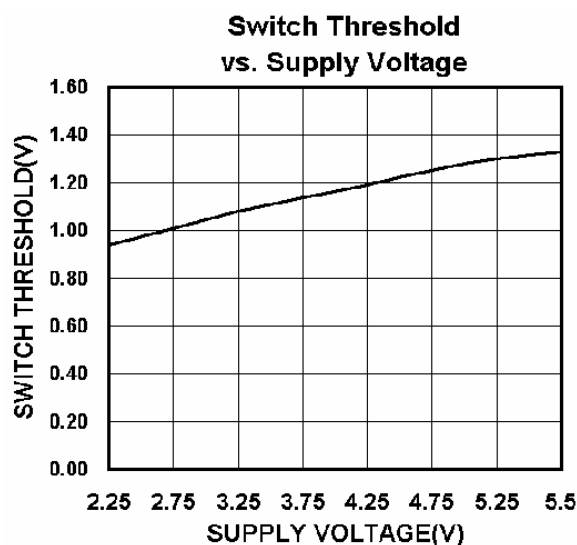

Symbol	Parameter	Conditions	Min	Typ	Max	Units
$V_{OUT}$	Output Voltage Accuracy	Variation from nominal Vout	-1.5		1.5	%
Reg Line	Line Regulation	Input range $V_{in} = V_{out} + 1V$ to 5.5V	-0.2	0.02	0.2	%/V
Reg Load	Load Regulation	$I_{out} = 100\mu A$ to 150mA (Vout 1 & Vout 2)		0.7	2	%
		$I_{out} = 100\mu A$ to 300mA (Vout)		1	2.5	
$V_{Drop}$	Dropout Voltage	$I_{out} = 150mA$ (Vout 1)		120	180	mV
		$I_{out} = 300mA$ (Vout 2)		240	350	
$I_Q$	Ground Pin Current	$I_{out1} = I_{out2} = 0$		150	170	$\mu A$
		$I_{out1} = 150mA$ & $I_{out2} = 300mA$		250	300	
$I_{Q\_SD}$	Ground Pin Current in Shutdown	$V_{EN} = 0.4V$		3	5	$\mu A$
PSRR	Ripple Rejection	Freq.=1Khz; $C_{out} = 1.0\mu F$ ; $C_{BYP} = 10nF$		70		dB
$I_{out(Max)}$	Current Limit	Output 1 Short to Ground	150	340		mA
		Output 2 Short to Ground	300	580		
Noise	Output Voltage Noise	$C_{out} = 1.0\mu F$ ; $C_{BYP} = 10nF$ ; BW=10~100KHz		40		$\mu V_{rms}$
<b>Enable Input</b>						
$V_{EN}$	Enable Input voltage	Logic Low (Regulator Shutdown)			0.6	V
		Logic High (Regulator Enable)	1.8			
$I_{EN}$	Enable Input Current	$V_{IL} < 0.6V$ (Regulator Shutdown)	-0.5	0.01	0.5	$\mu A$
		$V_{IH} > 1.8V$ (Regulator Enable)	-0.5	0.01	0.5	

### Typical Operating Characteristics

Unless otherwise specified,  $C_{IN}=C_{COUT}=1\mu F$  Ceramic,  $C_{BYPASS}=100nF$ ,  $V_{IN}=V_{OUT}+1V$ ,  $I_{OUT}=100\mu A$ ,  $T_A=25^\circ C$ , Enable pin is tied to  $V_{IN}$ .

## Application Note

### Function Description

The EUP7211 is a high performance, low quiescent current power management IC consisting of two  $\mu$ Cap low dropout regulators, a power-on reset (POR) circuit and an open-drain driver. The first regulator is capable of sourcing 150mA at output voltages from 1.25V to 5V. The second regulator is capable of sourcing 300mA of current at output voltages from 1.25V to 5V. The second regulator has a POR circuit that monitors its output voltage and indicates when the output voltage is within 5% of nominal. The POR offers a delay time that is externally programmable with a single capacitor to ground. An open-drain driver completes the power management chipset, offering the capability of driving LEDs for keypad backlighting in applications such as cellphones.

### Enable 1 and 2

The enable inputs allow for logic control of both output voltages with individual enable inputs. The EUP7211 is turned off by pulling the  $V_{EN}$  pin low, and turned on by pulling it high. If this feature is not used, the  $V_{EN}$  pin should be tied to  $V_{IN}$  to keep the regulator output on at all time. To assure proper operation, the signal source used to drive the  $V_{EN}$  input must be able to swing above and below the specified turn-on/off voltage thresholds listed in the Electrical Characteristics section under  $V_{IL}$  and  $V_{IH}$ .

### External Capacitors

Like any low-dropout regulator, the EUP7211 requires external capacitors for regulator stability. The EUP7211 is specifically designed for portable applications requiring minimum board space and smallest components. These capacitors must be correctly selected for good performance.

### Input Capacitor

An input capacitance of  $\approx 1\mu\text{F}$  or greater is required between the EUP7211 input pin and ground (the amount of the capacitance may be increased without limit).

This capacitor must be located a distance of not more than 1cm from the input pin and returned to a clean analog ground. Any good quality ceramic, tantalum, or film capacitor may be used at the input.

### Output Capacitor

The EUP7211 is designed specifically to work with very small ceramic output capacitors. A ceramic capacitor (temperature characteristics X7R, X5R, Z5U, or Y5V) in 1 to 22 $\mu\text{F}$  range with 5m $\Omega$  to 500m $\Omega$  ESR range is suitable in the EUP7211 application circuit.

The output capacitor must meet the requirement for minimum amount of capacitance and also have an ESR (Equivalent Series Resistance) value which is within a stable range (5m $\Omega$  to 500m $\Omega$ ).

### No-Load Stability

The EUP7211 will remain stable and in regulation with no external load. This is specially important in CMOS RAM keep-alive applications.

### Capacitor Characteristics

The EUP7211 is designed to work with ceramic capacitors on the output to take advantage of the benefits they offer: for capacitance values in the range of 1 $\mu\text{F}$  to 4.7 $\mu\text{F}$  range, ceramic capacitors are the smallest, least expensive and have the lowest ESR values (which makes them best for eliminating high frequency noise). The ESR of a typical 1 $\mu\text{F}$  ceramic capacitor is in the range of 20m $\Omega$  to 40m $\Omega$ , which easily meets the ESR requirement for stability by the EUP7211.

The ceramic capacitor's capacitance can vary with temperature. The capacitor type X7R, which operates over a temperature range of -55 $^{\circ}\text{C}$  to +125 $^{\circ}\text{C}$ , will only vary the capacitance to within  $\pm 15\%$ . Most large value ceramic capacitors ( $\approx 2.2\mu\text{F}$ ) are manufactured with Z5U or Y5V temperature characteristics. Their capacitance can drop by more than 50% as the temperature goes from 25 $^{\circ}\text{C}$  to 85 $^{\circ}\text{C}$ . Therefore, X7R is recommended over Z5U and Y5V in applications where the ambient temperature will change significantly above or below 25 $^{\circ}\text{C}$ .

### Noise Bypass Capacitor

Connecting a 0.01 $\mu\text{F}$  capacitor between the  $C_{BYPASS}$  pin and ground significantly reduces noise on the regulator output. This cap is connected directly to a high impedance node in the bandgap reference circuit. Any significant loading on this node will cause a change on the regulated output voltage. For this reason, DC leakage current through this pin must be kept as low as possible for best output voltage accuracy. The types of capacitors best suited for the noise bypass capacitor are ceramic and film.

Unlike many other LDO's, addition of a noise reduction capacitor does not effect the load transient response of the device

## Packaging Information

## DFN-8

## NOTE

1. All dimensions are in millimeters,  $\theta$  is in degrees
2. M: The maximum allowable corner on the molded plastic body corner
3. Dimension D does not include mold protrusions or gate burrs. Mold protrusions and gate burrs shall not exceed 0.15mm per side
4. Dimension E does not include interterminal mold protrusions or terminal protrusions. Interterminal mold protrusions and/or terminal protrusions shall not exceed 0.20mm per side
5. Dimension b applies to plated terminals. Dimension A1 is primarily Y terminal plating, but may or may not include a small protrusion of terminal below the bottom surface of the package
6. Burr shall not exceed 0.060mm
7. JEDEC MO-229
