LM2480 80V Triple Bias Clamp

General Description

The LM2480 driver is an Integrated 80V triple bias clamp circuit for DC recovery of each of the AC coupled outputs of a CRT driver. It is well matched with the DAC outputs of the LM126X family of pre-amplifiers. Each amplifier has its gain internally set to -18. The IC is packaged in an industry standard 8 lead molded DIP package.

- Single supply operation
- Matched to the LM126X family of preamplifiers

Recommended Applications

CRT monitors requiring DC restoration at the cathodes

Features

- Wide range integrated triple bias clamp
- High input impedance

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/ Distributors for availability and specifications.

 $\label{eq:Supply Voltage, VCC} Supply Voltage, V_{IN} & +90 V \\ Input Voltage, V_{IN} & 0 V to 5 V \\ Storage Temperature Range, T_{STG} & -65 ^{\circ} C to +150 ^{\circ} C \\ \end{array}$

Lead Temperature (Soldering,

<10sec.) 300°C

ESD Tolerance

Machine Model 200V Human Body Model 2KV

Limits of Operating Ranges (Note 3)

 $\begin{array}{cc} \rm V_{CC} & 70V \ to \ 85V \\ V_{OUT} & 10V \ to \ V_{CC} \\ \rm Ambient \ Temperature \ Range, \ T_A & 0 \ to \ 70^{\circ}C \end{array}$

DC CLAMP ELECTRICAL CHARACTERISTICS TARGETS AND LIMIT

Unless otherwise noted: V_{CC} = +80V, V_{IN} = 2.25 V_{DC} , T_A = 25 $^{\circ}$ C.

Symbol	Spec Parameter	Conditions	Min	Тур	Max	Units
I _{cc}	Supply Current	All channels		2.1	3.5	mA
V _{OUT}	DC Output Voltage		42	46	50	V_{DC}
V _{OUT-Range}	Output Voltage Range	V _{IN} Range = 1.0V - 4.0V		53		V
V _{OUTSAT}	Max Saturation Limit	V _{IN} = 4.0V		16		V_{DC}
A _V	DC Voltage Gain		-16	-18	-20	
LE	Linearity Error	See Note 1		5		%
R _{IN}	Input Resistance			34K		Ω

Note 1: Linearity Error is the variation in DC gain from $V_{IN} = 1.0V$ to $V_{IN} = 4.0V$.

Note 2: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur.

Note 3: Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. For guaranteed specifications and the test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed. Some performance characteristics may change when the device is not operated under the listed test conditions.

Note 4: All voltages are measured with respect to GND, unless otherwise specified.

Test Circuit

FIGURE 3. Test Circuit (One Channel)

Figure 3 shows the test circuit for evaluation of the LM2480 Clamp Amplifier. A high impedance VM (>100M Ω) is used for DC measurements at the output.

Typical Performance Characteristics

(V_{CC} = +80V), Test Circuit - Figure 3 unless otherwise specified.

THEORY OF OPERATION

The circuit diagram of the LM2480 is shown in Figure 1. The DC clamp circuit amplifies the input signal by -18 and the gain is set by the resistor ratio of 18R and R. The output requires pull-up resistor to 80V. Figure 2 shows the test circuit used for evaluation of the LM2480 Clamp Amplifier. A high impedance voltmeter (>100M Ω) is used for DC measurements at the output. The DC transfer function is shown in Figure 4.

APPLICATION HINTS

Power Supply Bypass

The LM2480 should have proper power supply bypassing for optimum performance. A $0.1\mu F$ capacitor should be connected from the supply pin, V_{cc} , to ground, as close to the supply and ground pins as is practical. Additionally, a $1.0\mu F$ electrolycelectrolytictic capacitor should be connected from

the supply pin to ground. The electrolytic capacitor should also be placed reasonably close to the LM2480's supply and ground pins.

Application Circuit

The application circuit shown in Figure 5 is designed to help clamp the voltage at the output of the driver to the desired level. Capacitor $\rm C_4$ stabilizes the entire node at the anode of the clamp diode, $\rm D_3$, by creating a low impedance at high frequencies. Figure 5 also shows the standard application circuit topology when used with an LM246X CRT driver. It shows all the components necessary to optimize performance as well as to protect against damage from a CRT arc event. No additional components are required to protect the LM2480 from arc damage.

Application Circuit

Demonstration Hardware

National Semiconductor has designed a demonstration neckboard for the LM126X, LM246X, and the LM2480 chipset. To obtain demonstration boards contact the National Semiconductor Sales Office in your region.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

- 1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- 2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
