

High-Speed CMOS Logic ICs

CD54/74HC/HCT Series

The Harris HC/HCT series of high-speed CMOS logic integrated circuits includes an extensive line of products that are pin compatible with many existing bipolar 54/74 LSTTL and CMOS 4000 series of digital logic types. The new HC/HCT series ICs provide high-speed CMOS replacements for the most popular LSTTL devices in existing designs and also offer low-power all-CMOS designs for the new digital systems. Key family features of the Harris HC/HCT types include:

- Speeds equivalent to LSTTL types with typical gate delays of 8ns.
- Fanout to 10 74LSTTL loads; 15 loads using Bus Driver 54/74 types.
- Operating frequencies equivalent to LSTTL types, typically 50MHz.

- Full Operating Temperature Ranges:
F Package: -55 to +125°C
E & M Packages: -40 to +125°C
- The high voltage noise immunity characteristic of CMOS, typically 45 percent of V_{CC} , a two to three times improvement over LSTTL (HC-series types.)
- Wide range of power supply operating voltages, 2 to 6 volts.
- CMOS low static power consumption, typically less than 1 microwatt.

The product line consists of CD54/74HC-series types, which feature CMOS input voltage level compatibility, and CD54/74HCT-series types, which are input voltage level compatible with LSTTL devices. The line also includes a limited number of single-stage, unbuffered inverter types (CD54/74HCU-series) for added versatility in oscillator and amplifier applications.
