# **RTS511B**

## **FAN CONTROLLER**

#### **Features**

- Wide operating voltage range: 3.5V 5.5V
- Use 32768Hz quartz crystal as time base
- Three wind modes:
  - Constant-speed wind, Rhythmical wind & Sleep wind
- Three wind grades for each wind mode:
  - Soft, Medium & Strong wind
- Two types of selectable timing function
  - Summable, non-summable
- Special protections preventing key-in mistakes
- Power-ON Reset
- One key controlling "Fan Swinging" and "Lighting" functions
- Low power consumption
- Combined with RTS715-2, which functions an infrared remote controller for fan
- Supplying a select pin to enable or disable sleep mode

DataSheet4U.com

# **General Description**

Similar to RTS510B, the fan controller RTS511B, embedded with a remote-control receiver, is a CMOS LSI designed for fan controller applications. It is a remote control system with three wind modes, three wind grades and six timing functions achieved by combining RTS511B with RTS715-2. In the Rhythmical wind mode, the wind speed is programmable. For example, it can be be soft— medium— strong— soft etc., according to the program. In Sleep wind mode, the wind speed automatically decreases to help fall asleep. There are six types of fan controller as shown: (bonding option 1, option 2 and option 3)

71	types or fair controller as chown (somaling option 1) option 2 and option 3)						
Function	Timer	Bonding	Bonding	Bonding	Light &	Select	
Type \		Option1	Option2	Option3	Swing	0	1
RTS511B-000	$0.5 \rightarrow 1 \rightarrow 2 \rightarrow 4$ summable	F	F	GND	Light is Indepen-	Enabl	Disabl
RTS511B-011	1→2→4→8 non-summable	F	VDD	F	dent. Swing is	e sleep	e sleep
RTS511B-101	1→2→4 non-summable	VDD	F	F	depended on "A2".	wind	wind

<sup>\*</sup> Dependent: Only when fan controller is initiated by "A2" key, "Swing" is started by pressing "A5" key. Independent: "Light" can be controlled by "A6" key, whether or not the fan controller is initiated by "A2" key.

## **Absolute Maximum Ratings**

DC Supply Voltage	DataSho .3.5V to
5.5V	
Input/Output VoltageGND -0.2V to	VDD +
0.2V	
Operating temperature	10 C to
60 C	
Storage Temperature2	25 C to
125 C	

#### Comments\*

Never allow a stress to exceed the values listed under "Absolute Maximum Ratings", otherwise the device would suffer from a permanent damage. Nor is a stress at the listed values allowed to persist over a period, since an extended exposure to the absolute maximum rating condition may also affect the reliability of the device, if not causing a damage thereof.

#### **Electrical Characteristics**

(VDD=4.5V, GND=0V, T<sub>A</sub>=25 C, unless otherwise specified.)

Parameter	Symbol	Min.	Тур.	Max.	Conditions
Operating Voltage	VDD	3.5V	4.5V	5.5V	
Current on TRIAC Sinking Pin	I <sub>TRIAC</sub>	1	7mA	-	$V_{OL} = 0.8V$
Current on LED Driver Pin	IDRIVING	1	9mA	-	$V_{OH} = 2.0V$
Current on C1, C2 pin	Isinking	-	13mA	-	$V_{OL} = 0.8V$
Current on BD pin	I <sub>DRIVING</sub> & I <sub>SINKING</sub>	ı	4mA	-	V <sub>OH</sub> = 2.0V
Crystal Oscillator Frequency	$F_{REQ}$	1	32768Hz	-

## **Operation Function**

There are two ways of sending control signals: from the keypad of the control panel and the infrared ray receiving module. There are six operations on these signal control: Turn off, Wind speed, Wind mode, Timer setting, Head swing, and Lighting. When control signals other than "Turn off" are received, the control system echos a "Beep" sound. If any two or more keys are simultaneously pressed, neither of the corresponding functions will be activated. If any key is pressed over 6 seconds, the fan controller will automatically echo four "Beep" sounds for warning and then power Off. The "Speed" function starts the fan, initiating the speed is at "Soft wind". When pushing the "Speed" key, the sequence of the wind speed follows "Soft→ Medium→ Strong...". The sequence of the "Mode" is "Constant→ Rhythmical→ Sleep". In the later section, the detail "Speed" & "Mode" function graphs are shown.

Note: Strong wind begins to move one second before soft wind starts.

## **Pin Description**

Dia Na	Designatio	Description				
Pin No.	n	DataSheet4U.com				
1	OSCO	32768Hz crystal oscillator output pin				
2	WEAK	Soft wind (driving TRIAC)				
3	MIDDLE	Medium wind (driving TRIAC)				
4	STORNG	Strong wind (driving TRIAC)				
5	LIGHT	Lamp (driving TRIAC)				
6	SWING	Swing head output (driving TRIAC)				
7	GND	Negative power supply				
8	C1	LED pattern common pin 1				
9	C2	LED pattern common pin 2				
10	SELECT	Pull low enable sleep wind mode, pull high disable sleep wind mode				
11	A6	Enable lamp, toggle function (low active)				
12	A5	Enable swing head, toggle function (low active) and LED output				
13	A4	Time setting (low active) and LED output				
14	A3	Wind mode selector (low active) and LED output				
15	A2	Wind speed selector (low active) and LED output				
16	A1	Low active, all function and LED output will be "OFF"				
17	VDD	Positive power supply				
18	BD	Sound output				
19	SIB	Remote control signal input				
20	OSCI	32768Hz crystal oscillator input pin
