TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

**TC74HC4024AP, TC74HC4024AF****7-STAGE BINARY COUNTER**

The TC74HC4024A is a high speed CMOS 7-STAGE BINARY COUNTER fabricated with silicon gate C<sup>2</sup>MOS technology.

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

A negative transition on the  $\overline{CK}$  input brings one increment to the counter.

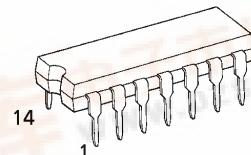

A CLR input is used to reset the counter to the all low level state. A high level at CLR accomplishes the reset function.

All divided output stages are provided, and the last stage, 1/128 divided frequency will be obtained.

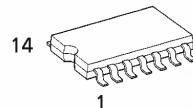

All inputs are equipped with protection circuits against static discharge or transient excess voltage.
