Hex Non-Inverting 3-State Buffer

The MC14503B is a hex non–inverting buffer with 3–state outputs, and a high current source and sink capability. The 3–state outputs make it useful in common bussing applications. Two disable controls are provided. A high level on the Disable A input causes the outputs of buffers 1 through 4 to go into a high impedance state and a high level on the Disable B input causes the outputs of buffers 5 and 6 to go into a high impedance state.

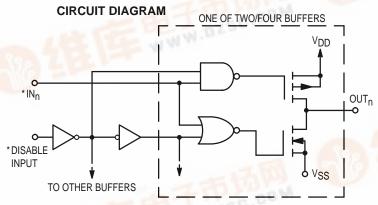

- 3-State Outputs
- TTL Compatible Will Drive One TTL Load Over Full Temperature Range
- Supply Voltage Range = 3.0 Vdc to 18 Vdc
- Two Disable Controls for Added Versatility
- Pin for Pin Replacement for MM80C97 and 340097

MAXIMUM RATINGS* (Voltages Referenced to VSS)

- (- 4 3 4 4 4 4 4 6 6 6							
Symbol	Parameter	Value	Unit				
V _{DD}	DC Supply Voltage	- 0.5 to + 18.0	V				
V _{in} , V _{out}	Input or Output Voltage (DC or Transient)	– 0.5 to V _{DD} + 0.5	V				
lin	Input Current (DC or Transient), per Pin	± 10	mA				
lout	Output Current (DC or Transient), per Pin	± 25	mA				
PD	Power Dissipation, per Package†	500	mW				
T _{stg}	Storage Temperature	- 65 to + 150	°C				
TL	Lead Temperature (8–Second Soldering)	260	°C				

* Maximum Ratings are those values beyond which damage to the device may occur. †Temperature Derating:

Plastic "P and D/DW" Packages: – 7.0 mW/°C From 65°C To 125°C Ceramic "L" Packages: – 12 mW/°C From 100°C To 125°C

* Diode protection on all inputs (not shown)

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V_{in} and V_{out} should be constrained to the range $V_{SS} \le (V_{in} \text{ or } V_{out}) \le V_{DD}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either VSS or VDD). Unused outputs must be left open.
