

# 6-channel high current driver BA664

The BA664 is an IC with a built-in clamp diode, developed for the purpose of minimizing attachments, and contains a Darlington transistor array of six circuits with input resistance. Input and output are directed in the same direction by DIP Pin 14, with the layout optimized to facilitate mounting.

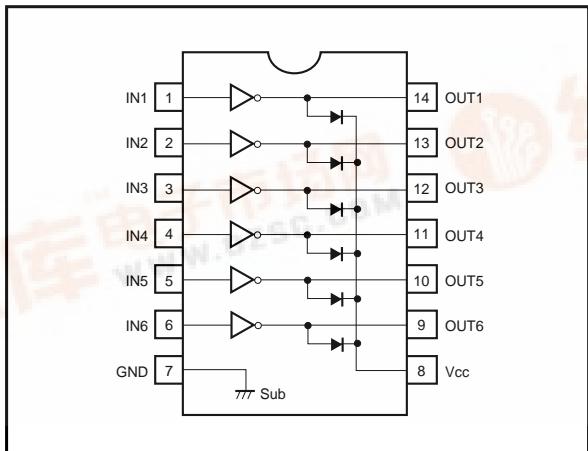

## ● Applications

Hammer solenoid drivers  
Relay drivers  
LED drivers  
Small motor drivers  
Lamp drivers

## ● Features

- 1) 6-circuit Darlington transistor array
- 2) Current of 100mA (Max.) can be driven.
- 3) Input and output are directed in the same direction, for easy mounting.
- 4) Can be coupled with MOS ICs.
- 5) High current transfer ratio.
- 6) High voltage withstanding values of 38V for input and 27V for output.
- 7) Clamp diode for inductive load drive built in.
