NC - No internal connection

The SN74LV04 is available in TI's shrink small-outline package (DB), which provides the same I/O pin count and functionality of standard small-outline packages in less than half the printed-circuit-board area.

The SN54LV04 is characterized for operation over the full military temperature range of -55° C to 125° C. The SN74LV04 is characterized for operation from -40° C to 85° C.

logic symbol[†]

[†] This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

Pin numbers shown are for D, DB, J, PW, and W packages.

Supply voltage range, V _{CC}	–0.5 V to 7 V
Input voltage range, V _I (see Note 1)	-0.5 V to V _{CC} + 0.5 V
Output voltage range, V _O (see Notes 1 and 2)	-0.5 V to V _{CC} + 0.5 V
Input clamp current, I _{IK} (V _I < 0 or V _I > V _{CC})	±20 mA
Output clamp current, I_{OK} (V _O < 0 or V _O > V _{CC})	
Continuous output current, $I_O (V_O = 0 \text{ to } V_{CC})$	±25 mA
Continuous current through V _{CC} or GND	±50 mA
Maximum power dissipation at $T_A = 55^{\circ}C$ (in still air) (see Note 3): D package	1.25 W
DB or PW packag	ge 0.5 W
Storage temperature range, T _{stg}	–65°C to 150°C

[‡] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

2. This value is limited to 7 V maximum.

3. The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils.
