description

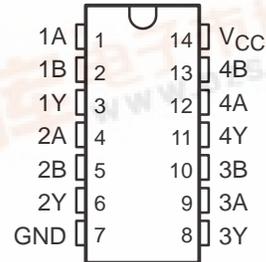

These quadruple 2-input positive-AND gates are designed for 2.7-V to 5.5-V V_{CC} operation.

The 'LV08 perform Boolean function $Y = A \cdot B$ or $Y = \overline{A} + \overline{B}$ in positive logic.

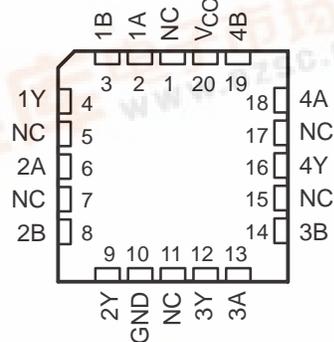

The SN74LV08 is available in TI's shrink small-outline package (DB), which provides the same I/O pin count and functionality of standard small-outline packages in less than half the printed-circuit-board area.

The SN54LV08 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74LV08 is characterized for operation from -40°C to 85°C .

| Storage temperature range, T_{stg} | -65°C to 150°C |

‡ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES:
1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
 2. This value is limited to 7 V maximum.
 3. The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils.
