

UC1846/7 UC2846/7 UC3846/7

# Current Mode PWM Controller

#### **FEATURES**

- Automatic Feed Forward Compensation
- Programmable Pulse-by-Pulse Current Limiting
- Automatic Symmetry Correction in Push-pull Configuration
- Enhanced Load Response Characteristics
- Parallel Operation Capability for Modular Power Systems
- Differential Current Sense Amplifier with Wide Common Mode Range
- Double Pulse Suppression
- 500mA (Peak) Totem-pole Outputs
- ±1% Bandgap Reference
- Under-voltage Lockout
- Soft Start Capability
- Shutdown Terminal
- 500kHZ Operation

#### **DESCRIPTION**

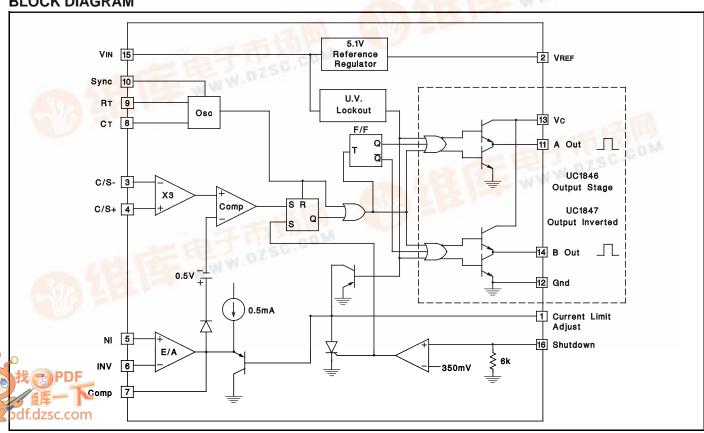

The UC1846/7 family of control ICs provides all of the necessary features to implement fixed frequency, current mode control schemes while maintaining a minimum external parts count. The superior performance of this technique can be measured in improved line regulation, enhanced load response characteristics, and a simpler, easier-to-design control loop. Topological advantages include inherent pulse-by-pulse current limiting capability, automatic symmetry correction for push-pull converters, and the ability to parallel "power modules" while maintaining equal current sharing.

Protection circuitry includes built-in under-voltage lockout and programmable current limit in addition to soft start capability. A shutdown function is also available which can initiate either a complete shutdown with automatic restart or latch the supply off.

Other features include fully latched operation, double pulse suppression, deadline adjust capability, and a  $\pm 1\%$  trimmed bandgap reference.

The UC1846 features low outputs in the OFF state, while the UC1847 features high outputs in the OFF state.

# **BLOCK DIAGRAM**

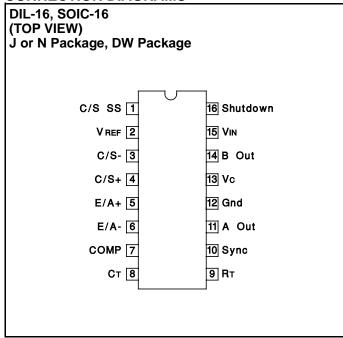

# **ABSOLUTE MAXIMUM RATINGS (Note 1)**

Supply Voltag	ge (Pin 15)	+40V
Collector Sup	oply Voltage (Pin 13)	+40V
Output Curre	nt, Source or Sink (Pins 11, 14)	500mA
Analog Input	ts (Pins 3, 4, 5, 6, 16)	0.3V to +V <sub>IN</sub>
Reference O	utput Current (Pin 2)	30mA
Sync Output	Current (Pin 10)	5mA
Error Amplifie	er Output Current (Pin 7)	5mA
Soft Start Sin	nk Current (Pin 1)	50mA
Oscillator Cha	arging Current (Pin 9)	5mA
Power Dissip	oation at T <sub>A</sub> =25°C	1000mW
Power Dissip	oation at Tc=25°C	2000mW
Storage Tem	perature Range	65°C to +150°C
	rature (soldering, 10 seconds	

Note 1. All voltages are with respect to Ground, Pin 13. Currents are positive into, negative out of the speficied terminal. Consult Packaging Section of Databook for thermal limitations and considerations of packages. Pin numbers refer to DIL and SOIC packages only.

- Note 2. These parameters, although guaranteed over the recommended operating conditions, are not 100% tested in production. Note 3. Parameter measured at trip point of latch with VPIN 5 = VREF, VPIN 6 = 0V.
- $G = \frac{\Delta \ VPIN7}{\Delta \ VPIN4}$ ;  $\Delta \ VPIN4 = 0$  to 1.0V. Note 4. Amplifier gain defined as:
- Note 5. Applies to UC1846/UC2846/UC3846 only due to polarity of outputs.
- Note 6. Current into Pin 1 guaranteed to latch circuit in shutdown state.
- Note 7. Current into Pin 1 guaranteed not to latch circuit in shutdown state.

#### APPLICATIONS DATA

# **Oscillator Circuit**

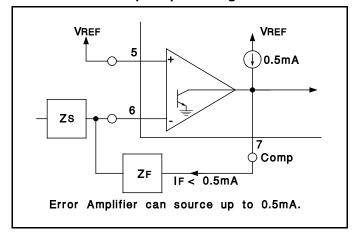

Output deadtime is determined by the external capacitor, CT, according to the formula:  $Td(\mu s) = 145CT(\mu f)$ ID = Oscillator discharge current at 25°C is typically 7.5.

For large values of RT:  $Td(\mu s) \approx 145CT(\mu f)$ .

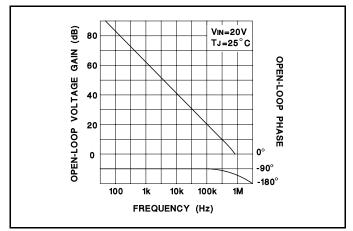

Oscillator frequency is approximated by the formula:  $f_T(kHz) \approx \frac{2.2}{R_T(k\Omega) \bullet C_T(\mu f)}$

#### **IMPORTANT NOTICE**

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
