

Dual Sound FM IF Amplifier

TBA 229-2

Bipolar IC

The component contains two separate limiter amplifiers with FM demodulators and separate AF outputs.

Features

- High AM suppression over a very wide input voltage range
- High sensitivity
- Very high symmetry

Type	Ordering Code	Package
TBA 229-2	Q67000-A8037	P-DIP-16

Circuit Description

The component contains two separate FM sound IF sections for television stereo applications or for multistandard receivers. Each FM section consists of an eight-stage symmetrical limiter amplifier followed by a coincidence demodulator and an AF pre-amplifier with a low-ohmic output. The component features considerably improved AM suppression characteristics with small input signals, as well as a very low frequency deviation between THD_{min} and AM_{min} .
