## 40－DOT SEGMENT DRIVER

## GENERAL DESCRIPTION

The MSM5839B is a dot matrix LCD segment driver LSI which is fabricated using low power CMOS metal gate technology．This LSI consists of two 20－bit shift registers，two 20－bit latches， a 40－bit level shifter and a 40－bit 4－level driver．
It converts serial data，which is received from an LCD controller LSI，to parallel data and outputs LCD driving waveform to the LCD panel．
Expansion of display can easily be made by increasing the number of characters and character patterns．
This LSI can drive a variety of LCD panels because the bias voltage，which determines the LCD driving voltage，can be optionally supplied from the external source．

## FEATURES

－Supply voltage $: 4.5$ to 5.5 V
－LCD driving voltage $: 8$ to 18 V
－Applicable LCD duty $: 1 / 32$ to $1 / 128$
－Bias voltage can be supplied externally
－Applicable common driver ：MSM5238（32 outputs）
－Package options：
56－pin plastic QFP（QFP56－P－910－0．65－K）（Product name：MSM5839B GS－K）
56－pin plastic QFP（QFP56－P－910－0．65－L2）（Product name：MSM5839B GS－L2）
56－pin plastic QFP（QFP56－P－910－0．65－2K）（Product name：MSM5839B GS－2K）

BLOCK DIAGRAM

## PIN CONFIGURATION

(Top view)

NC: No connection

## 56-Pin Plastic QFP (Type K)

NC: No connection

## 56-Pin Plastic QFP (Type L)

* This pin is internally connected to $\mathrm{V}_{\mathrm{DD}}$, so connect it to the power supply or leave it open.

Note: The figure for Tvpe L shows the configuration viewed from the reverse side of the package.

## ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Condition | Rating | Unit |
| :--- | :---: | :---: | :---: | :---: |
| Supply Voltage (1) | $\mathrm{V}_{\mathrm{DD}}$ | ${ }^{*} 1$ | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ | -0.3 to +6 |
| Supply Voltage (2) | $\mathrm{V}_{\mathrm{DD}}-\mathrm{V}_{\mathrm{EE}}$ | ${ }^{* 1}$ |  |  |
|  | $* 2$ | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ | 0 to 18 | V |
|  | $\mathrm{~V}_{\mathrm{DD}}-\mathrm{V}_{\mathrm{EE}}$ | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ | 0 to 18 | V |
| Input Voltage | $\mathrm{V}_{1}$ | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ | -0.3 to $\mathrm{V}_{\mathrm{DD}}+0.3$ | V |
| Storage Temperature | TSTG | - | -55 to +150 | ${ }^{\circ} \mathrm{C}$ |

${ }^{*} 1 \quad V_{D D}>V_{2}>V_{3}>V_{E E}$
*2 Applies when a series resistor of $47 \Omega$ or more is connected as shown below.

## RECOMMENDED OPERATING CONDITIONS

| Parameter | Symbol | Condition | Range | Unit |
| :--- | :---: | :---: | :---: | :---: |
| Supply Voltage (1) | $\mathrm{V}_{\mathrm{DD}}$ | - | 4.5 to 5.5 | V |
| Supply Voltage (2) | $\mathrm{V}_{\mathrm{DD}}-\mathrm{V}_{\mathrm{EE}}$ | $\star 1$ | - | 8 to 16 |
|  | $\mathrm{~V}_{\mathrm{DD}}-\mathrm{V}_{\mathrm{EE}}$ | $\stackrel{\star 1}{ } \times 2$ | - | V |
| Operating Temperature | $\mathrm{T}_{\mathrm{Dp}}$ | - | 8 to 18 | V |

${ }^{*} 1 \quad \mathrm{~V}_{\mathrm{DD}}>\mathrm{V}_{2}>\mathrm{V}_{3}>\mathrm{V}_{\mathrm{EE}}$
*2 Applies when a series resistor of $47 \Omega$ or more is connected as shown below.

## ELECTRICAL CHARACTERISTICS

## DC Characteristics

| $\left(\mathrm{V}_{\mathrm{DD}}=5 \mathrm{~V} \pm 10 \%, \mathrm{Ta}=-20\right.$ to $\left.+85^{\circ} \mathrm{C}\right)$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## FUNCTIONAL DESCRIPTION

## Pin Functional Description

## - DI

The data input pin for the 20-bit shift register (from 1st to 20th bit). The display data is input to the data pin in synchronization with a clock pulse.

- CP

Clock pulse input pin for the two 20-bit shift registers. The data is shifted in the two 20-bit shift registers at the falling edge of the clock pulse. Data setup time ( $\mathrm{t}_{\text {SETUP }}$ ) and data hold time ( $\mathrm{t}_{\mathrm{HOLD}}$ ) are required each between $\mathrm{DI}_{1}, \mathrm{DI}_{21}$ and CP. Refer to the Switching Characteristics.

## - $\mathrm{DO}_{20}$

The 20th output bit of the shift register.
The data which is input from $\mathrm{DI}_{1}$ is clocked out with the delay in the number of bits of the shift register (20). A 40-bit shift register can be configured by connecting the output of this pin to $\mathrm{DI}_{21}$ pin.

## - $\mathrm{Dl}_{21}$

The data input pin for the 20-bit shift register (from 21st to 40th bit).
Connecting the $\mathrm{DO}_{20}$ pin and this pin allows the device to be used as a 40-bit shift register.

- $\mathrm{DO}_{40}$

The 40th output bit of the shift register.
The data which is input from $\mathrm{DI}_{1}$ is clocked out with the delay in the number of the bits of the shift register (20).
When extending the number of characters, this pin is used to cascade connect the next MSM5839B.

- DF

Alternate signal input pin for LCD driving waveform.

- $\mathbf{V}_{\mathrm{DD}}\left(\mathbf{V}_{1}\right), \mathbf{V}_{\mathrm{SS}}$

Supply voltage pins. $\mathrm{V}_{\mathrm{DD}}$ should be 4.5 to 5.5 V .
$\mathrm{V}_{S S}$ is the ground pin $\left(\mathrm{V}_{S S}=0 \mathrm{~V}\right)$.

- $\mathbf{V}_{\mathbf{2}}, \mathbf{V}_{3}, \mathbf{V}_{\mathrm{EE}}\left(\mathbf{V}_{4}\right)$

Bias supply voltage pins to drive the LCD. Bias voltage is supplied from an external source.

## - LOAD

The signal for latching the shift register contents is input from this pin.
When LOAD pin is set at " H ", the shift register contents are transferred to the 40-bit 4-level driver. When LOAD pin is set at "L", the last display output data $\left(\mathrm{O}_{1}\right.$ to $\left.\mathrm{O}_{40}\right)$, which was transferred when LOAD pin was at "H", is held.

## - $\mathrm{O}_{1}$ to $\mathrm{O}_{40}$

Display data output pins which correspond to each data bit in the latch.
One of $V_{D D}, V_{2}, V_{3}$ or $V_{E E}\left(V_{4}\right)$ is selected as a display driving voltage source based on the combination of latched data level and DF signal. Refer to the Truth Table below.
These pins should be connected to the SEGMENT side of the LCD panel.

## Truth Table

| Latched data | DF | LCD driver output |
| :---: | :---: | :---: |
| H | H | $\mathrm{V}_{\mathrm{EE}}\left(\mathrm{V}_{4}\right)$ |
|  | L | $\mathrm{V}_{\mathrm{DD}}\left(\mathrm{V}_{1}\right)$ |
| L | H | $\mathrm{V}_{3}$ |
|  | L | $\mathrm{~V}_{2}$ |

## PACKAGE DIMENSIONS

(Unit : mm)

Notes for Mounting the Surface Mount Type Package
The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.
Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
