## IR2137/IR2237(J)(Q)

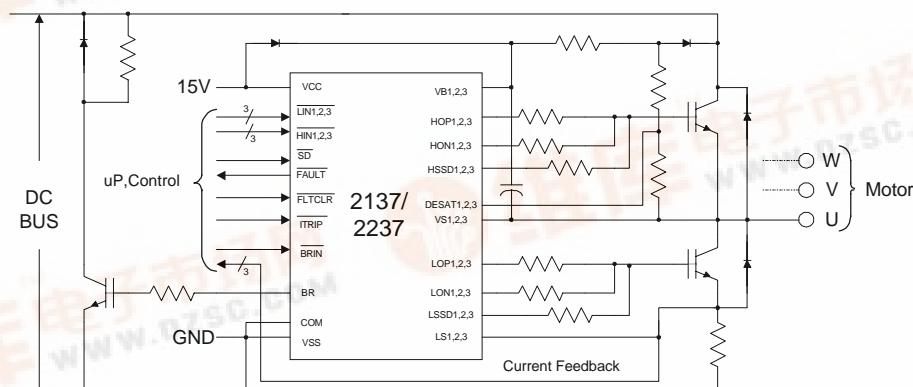

### Features

- Floating channel up to +600V or +1200V
- “soft” over-current shutdown turns off all six outputs
- Integrated high side desaturation circuit
- Controlled “soft” turn on for EMI reduction
- Integrated brake IGBT driver
- Three independent low side COM pins
- Separate pull-up/pull-down output drive pins
- Matched delay outputs
- 3.3V logic compatible
- Under voltage lockout with hysteresis band

### Description

The IR2137/IR2237(J)(Q) are a high voltage, high speed 3-phase IGBT driver best suited for AC motor drive applications. Integrated desaturation logic provides ground fault protection as well as other mode of over current protection. Soft shutdown is initiated in the event of any overcurrent/ground fault conditions, and all six outputs are simultaneously turned off. Output drivers have separate turn on/off pins to facilitate independent gate drive impedance with EMI soft turn on. Optimum matched delays between phases, and between high/low side enables small deadtime, thus improving low speed performance. The brake driver eliminates additional circuits.

### Typical Connection

(Refer to Lead Assignments for correct pin configuration). This/These diagram(s) show electrical connections only.  
Please refer to our Application Notes and DesignTips for proper circuit board layout.

#### Product Summary

V <sub>OFFSET</sub>	600V max. or 1200V max.
I <sub>O+-</sub>	220mA / 460mA
V <sub>OUT</sub>	12.5V - 20V
Brake I <sub>O+-</sub>	40mA/80mA
Matched delay	75nsec
Deadtime (typ.)	300 nsec
DESAT Blanking time (typ.)	2.0usec
DESAT input voltage threshold (typ.)	V <sub>t+</sub> = 5.0V

## Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.
