Note: For Power supply at the time of test, use a constant-voltage power supply unless otherwise specified.

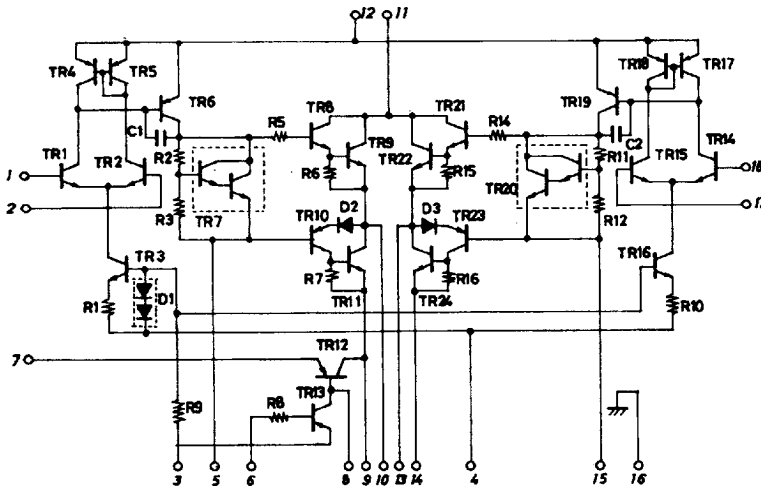

* For measurement of the available time for load short-circuit and output noise voltage, use the specified transformer power supply shown right.

** The output noise voltage is represented by the peak value on rms scale (VTVM) of average value indicating type. For AC power supply, use an AC stabilized power supply (50Hz) to eliminate the effect of flicker noise in AC primary line.
