

TC5020BP HEX LOW-TO-HIGH VOLTAGE TRANSLATOR (INVERTING)

TC5020BP contains six circuits of level converters which convert the signals from low power supply voltage logical systems to the logical signals for high power supply voltage C2MOS systems. This is most suitable for interfacing between TTL, MDTL systems and C2MOS systems, and between two power supply voltage C2MOS systems. Normally, V_{CC} is connected to low voltage power supply and V_{DD} is connected to high voltage power supply, however this can also operate having V_{CC} and V_{DD} common. When the input is "H", some amount of I_{CC} flows because of circuit structure.
