April 1988 Revised September 2000 4F283 4-Bit Binary Full Adder with Fast Carry

74F283 4-Bit Binary Full Adder with Fast Carry

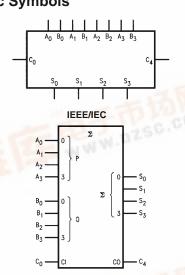

General Description

The 74F283 high-speed 4-bit binary full adder with internal carry lookahead accepts two 4-bit binary words (A_0 – A_3 , B_0 – B_3) and a Carry input (C_0). It generates the binary Sum outputs (S_0 – S_3) and the Carry output (C_4) from the most significant bit. The 74F283 will operate with either active HIGH or active LOW operands (positive or negative logic).

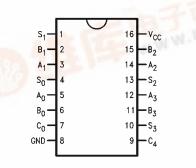

Ordering Code:

Order Number	Package Number	Package Description
74F283SC	M16A	16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150 Narrow
74F283SJ	M16D	16-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide
74F283PC	N16E	16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide
Devices also available	in Tape and Reel. Specify	/ by appending the suffix letter "X" to the ordering code.

Pin Names	Description	U.L.	Input I _{IH} /I _{IL}		
Pin Names	Description	HIGH/LOW	Output I _{OH} /I _{OL}		
A ₀ -A ₃	A Operand Inputs	1.0/2.0	20 µA/-1.2 mA		
В ₀ –В ₃	B Operand Inputs	1.0/2.0	20 μA/–1.2 mA		
C ₀	Carry Input	1.0/1.0	20 µA/–0.6 mA		
S_0-S_3	Sum Outputs	50/33.3	–1 mA/20 mA		
C ₄	Carry Output	50/33.3	-1 mA/20 mA		

74F283

Functional Description

The 74F283 adds two 4-bit binary words (A plus B) plus the incoming Carry (C₀). The binary sum appears on the Sum (S₀–S₃) and outgoing carry (C₄) outputs. The binary weight of the various inputs and outputs is indicated by the subscript numbers, representing powers of two.

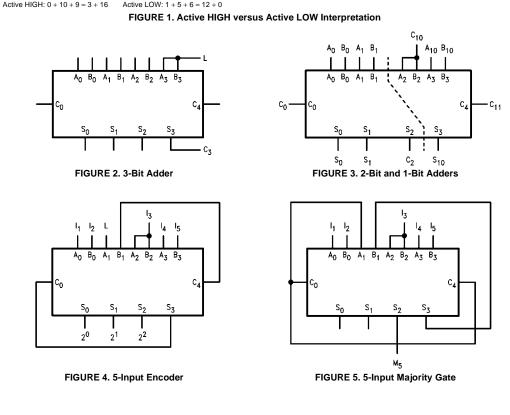

$$2^{0} (A_{0} + B_{0} + C_{0}) + 2^{1} (A_{1} + B_{1})$$
$$+ 2^{2} (A_{2} + B_{2}) + 2^{3} (A_{3} + B_{3})$$
$$= S_{0} + 2S_{1} + 4S_{2} + 8S_{3} + 16C_{4}$$
Where (+) = plus

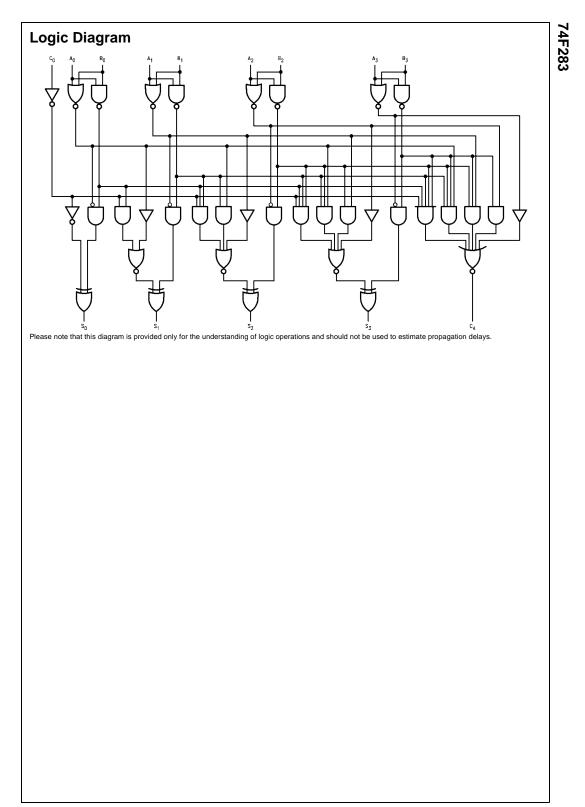

Interchanging inputs of equal weight does not affect the operation. Thus C₀, A₀, B₀ can be arbitrarily assigned to pins 5, 6 and 7 for DIPS, and 7, 8 and 9 for chip carrier packages. Due to the symmetry of the binary add function, the 74F283 can be used either with all inputs and outputs active HIGH (positive logic) or with all inputs and outputs active LOW (negative logic). See Figure 1. Note that if C₀ is not used it must be tied LOW for active HIGH logic or tied HIGH for active LOW logic.

Due to pin limitations, the intermediate carries of the 74F283 are not brought out for use as inputs or outputs.

However, other means can be used to effectively insert a carry into, or bring a carry out from, an intermediate stage. Figure 2 shows how to make a 3-bit adder. Tying the operand inputs of the fourth adder (A₃, B₃) LOW makes S_3 dependent only on, and equal to, the carry from the third adder. Using somewhat the same principle, Figure 3 shows a way of dividing the 74F283 into a 2-bit and a 1-bit adder. The third stage adder (A_2, B_2, S_2) is used merely as a means of getting a carry (C10) signal into the fourth stage (via A2 and B2) and bringing out the carry from the second stage on S_2 . Note that as long as A_2 and B_2 are the same, whether HIGH or LOW, they do not influence S2. Similarly, when A_2 and B_2 are the same the carry into the third stage does not influence the carry out of the third stage. Figure 4 shows a method of implementing a 5-input encoder, where the inputs are equally weighted. The outputs S_0 , S_1 and S_2 present a binary number equal to the number of inputs I1-I₅ that are true. Figure 5 shows one method of implementing a 5-input majority gate. When three or more of the inputs I1-I5 are true, the output M5 is true.

Absolute Maximum Ratings(Note 1)

Storage Temperature	$-65^{\circ}C$ to $+150^{\circ}C$
Ambient Temperature under Bias	$-55^{\circ}C$ to $+125^{\circ}C$
Junction Temperature under Bias	$-55^{\circ}C$ to $+150^{\circ}C$
V _{CC} Pin Potential to Ground Pin	-0.5V to +7.0V
Input Voltage (Note 2)	-0.5V to +7.0V
Input Current (Note 2)	-30 mA to +5.0 mA
Voltage Applied to Output	
in HIGH State (with $V_{CC} = 0V$)	
Standard Output	–0.5V to $V_{\mbox{\scriptsize CC}}$
3-STATE Output	-0.5V to +5.5V
Current Applied to Output	
in LOW State (Max)	twice the rated I_{OL} (mA)
ESD Last Passing Voltage (Min)	4000V

Recommended Operating Conditions

Free Air Ambient Temperature	$0^{\circ}C$ to $+70^{\circ}C$
Supply Voltage	+4.5V to +5.5V

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

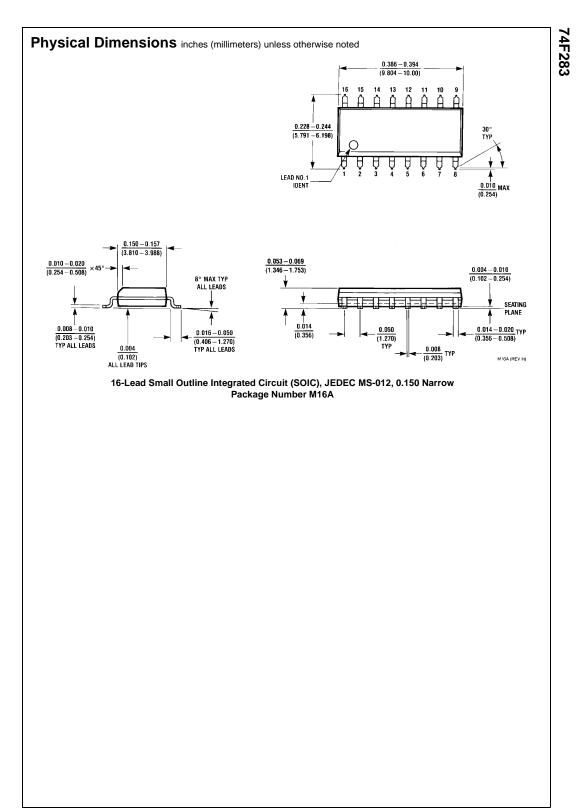

Note 2: Either voltage limit or current limit is sufficient to protect inputs.
