## LCD Display Drivers

### Overview

The LC75821E and LC75821W are general-purpose LCD display drivers that can be used for frequency display in microprocessor-controlled radio receivers and in other display applications.

### Features

- 53 segment outputs (the maximum for static drive)
- Two drive types: static (1/1) duty (53 segments) and 1/2 duty (104 segments)
- Data input: 3 serial input pins
- INH pin for turning off all display output
- The difference from the LC7582: The LC75821E, LC75821W are A/D converter, DSP function-removed versions of the LC7582 of which the functions other than the two can be used with pin compatibility with the LC7582 kept.

### Pin Assignment

### Block Diagram

### Pin Functions

Pin	Function
S1 to S53	Segment output pins
COM1, COM2	Common output pins (Only COM1 is used in static (1/1) drive. COM2 must be left open in that mode.)
$V_{LCD}$	LCD bias voltage setting
OSC	Oscillator connection
CE, CLK, DATA	Serial data transfer inputs
$V_{SS}$ , $V_{DD}$	Power supply
$\overline{INH}$	Display off control input $\overline{INH} = \text{low } (V_{SS}) \dots\dots\dots$ Display off (S1 to S53, COM1, COM2 = low) $\overline{INH} = \text{high } (V_{DD}) \dots\dots\dots$ Display on Note that serial data transfers can be performed when display output is forced off.
OPEN	Make no connections to this pin.

### Data Transfer Format

#### 1. Static (1/1) duty

Transfer direction (56 bits)

2. 1/2 duty (Only 56 bits need to be transferred if there are no more than 52 display segments. The transfer format is identical to the static duty case. It is not possible to change the D54 to D106 data without specifying the D1 to D53 data.)

Transfer direction (112 bits)

The values of bits D53 and D106 are ignored.(don't care)

- D1 to D53: Display data (1/1 duty) Lighted at 1
- D1 to D106: Display data (1/2 duty) Unlighted at 0
- DP: Drive type selection bit
  - 1/2 duty at 1
  - 1/1 duty at 0
- ×: don't care

### Data Transfer Examples

#### 1. Static duty

#### 2. 1/2 duty with 52 or fewer segments

#### 3. 1/2 duty with more than 52 segments

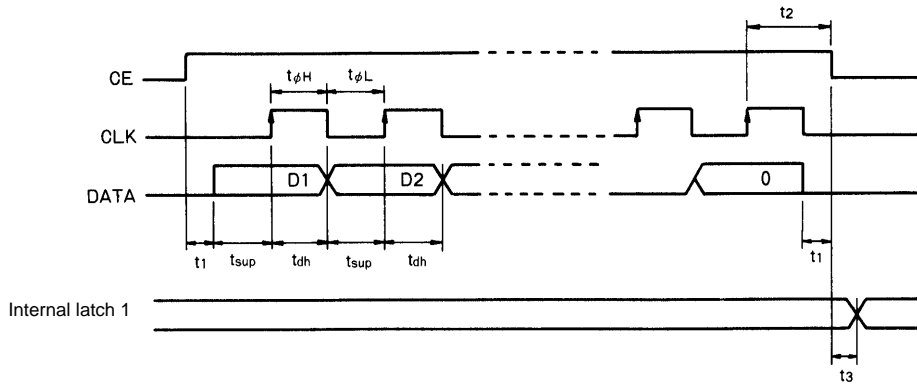

Note: The following transfer format is not allowed in 1/2 duty with 52 or fewer segments.

### Display Examples

#### 1. Static drive (1/1 duty)

Example with 40 segments (Up to 53 segments can be driven.)

Note: Numbers in circles indicate the number of segments used.

#### 2. 1/2 duty drive

Example with 80 segments (Up to 104 segments can be driven.)

### Sample Application Circuit 1

### Sample Application Circuit 2

Note: The internal display data is undefined when power (V<sub>DD</sub>) is first applied. Since a meaningless pattern will be displayed if the display is turned on in that state, the display should be turned off by setting  $\overline{\text{INH}}$  low and turned on only after display data has been sent from the controller.

### Oscillator Frequency

Refer to the figure below when determining the oscillator frequency.

**Figure 1 LC75821E, 75821W Oscillator Frequency vs. CR Constant**

**Figure 2 LC75821E, 75821W Oscillator Frequency vs.  $V_{DD}$**

Recommended range for external resistance: 10 to 100 k $\Omega$  (Carbon resistance)

Recommended range for external capacitance: 330 to 3300 pF

330 to 820 pF: (Ceramic capacitance with a zero temperature coefficient)

1000 to 3300 pF: (Mylar capacitance with a positive temperature coefficient)
