Operational Description

The following is an explanation of hardware configuration and operation in relation to the TMP47P422V. The TMP47P422V is the same as the TMP47C222/422 except that an OTP is used instead of a built-in mask ROM.

1. Operation mode

The TMP47P422V has a MCU mode and a PROM mode.

1.1 MCU mode

The MCU mode is set by attaching a resonator between the XIN and Xout pins. Operation in the MCU mode is the same as for the TMP47C222/422. In the TMP47P422V, RC oscillation is impossible.

1.1.1 Program Memory

The program storage area is the same as for the TMP47C422.

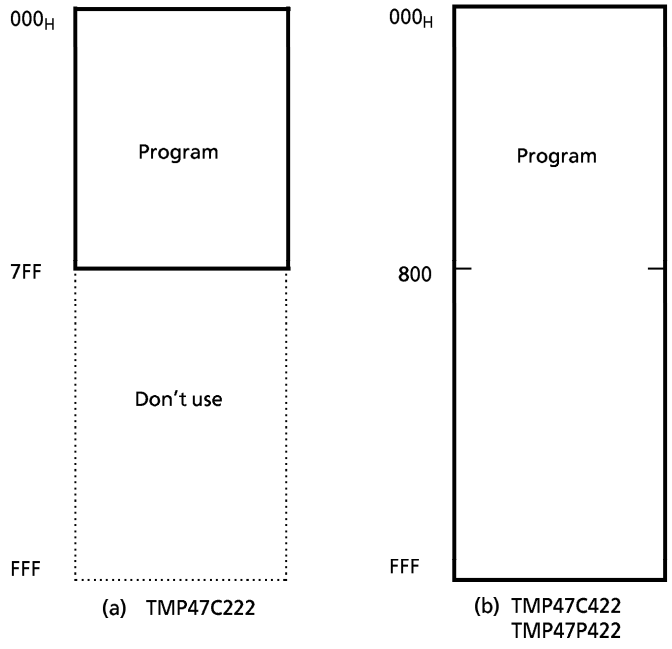

Figure 1-1. Program area (ROM)

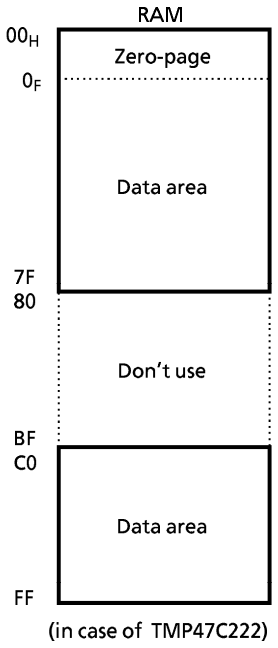

Figure 1-2. RAM addressing

1.1.2 Data Memory

The TMP47P422V contains 256 × 4-bit (equivalent to TMP47C422) data memory. When the TMP47P422V is used as evaluator of the TMP47C222, programming should be performed assuming that the RAM is assigned to addresses 00 to $7F_H$ and C0 to FF_H as show in Figure 1-2 by considering the application software evaluation. When the BM47C422 (emulator) is used as the TMP47C222 evaluator, it is sam.

1.1.3 Input / Output Circuitry

(1) Control pins

TMP47P422V is the same as code SA of the TMP47C222/422. In the TMP47P422V, RC oscillation is impossible. Connecting the resonator or inputting the external clock to XIN pin are required when using as evaluator of I/O code SD.

(2) I/O Ports

The input / output circuit of the TMP47P422V is the same as the TMP47C222/422.

Electrical Characteristics

Input Voltage	V_{IN}		– 0.3 to V_{DD} + 0.3	V
Output Voltage	V_{OUT}		– 0.3 to V_{DD} + 0.3	V
Output Current (Per 1 pin)	I_{OUT1}	Port R4, R7	30	mA
	I_{OUT2}	Port R5, R6, R8, R9	120	
Output Current	ZI_{OUT}	Port R4, R7	120	mA
Power Dissipation [Topr = 70°C]	PD		400	mW
Soldering Temperature (time)	Tsld		260 (10 s)	°C

Note: The absolute maximum ratings are rated values which must not be exceeded during operation, even for an instant. Any one of the ratings must not be exceeded. If any absolute maximum rating is exceeded, a device may break down or its performance may be degraded, causing it to catch fire or explode resulting in injury to the user. Thus, when designing products which include this device, ensure that no absolute maximum rating value will ever be exceeded.

			V_{DD} = 2.2 to 5.5 V		4.2	
	fs	XTIN, XTOUT	V_{DD} = 2.2 to 5.5 V	30	34	kHz

Note: The recommended operating conditions for a device are operating conditions under which it can be guaranteed that the device will operate as specified. If the device is used under operating conditions other than the recommended operating conditions (supply voltage, operating temperature range, specified AC/DC values etc.), malfunction may occur. Thus, when designing products which include this device, ensure that the recommended operating conditions for the device are always adhered to.
