Continuous total power dissipation	See Dissipation Rating Table		
Operating free-air temperature range, T_A	–55 to 125	0 to 70	°C
Storage temperature range, T_{stg}	–65 to 150	–65 to 150	°C
Case temperature for 60 seconds, T_C	FK package	260	°C
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds	JG package	300	°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	D or P package	260	°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES:
1. Voltage values are with respect to network GND unless otherwise specified.
 2. This is the voltage between two emitters A and B.
 3. This value applies when the base-emitter resistance (R_{BE}) is equal to or less than 500 Ω .
 4. Both halves of these dual circuits may conduct rated current simultaneously; however, power dissipation averaged over a short time interval must fall within the continuous dissipation rating.
