ON SCREEN DISPLAY MIX IC

GENERAL DESCRIPTION

NJM2252 is the IC that has been developed for VCR application, which has the super-impose function as well as the function to drive the S-VHS, S-output pin by putting the external transistor.

NJM2252 has Y signal pin and C singal pin of each independent circuit in it. Y signal line is selectable of 4 inputs, and C signal line is selectable of 3 inputs, each by the inside switches.

Further more, it has function to adjust the output level of S-VHS, Spin.

FEATURES

- 9V spec, (Recommended operational voltage range 8.6~9.4V)
- Voltage gain can be controlled by the external resistor (Typ. ± 3 dB)
- Wide band (Y signal line 10MHz, C signal line 8MHz)
- Output sag. correction circuit incorporated (Y signal line)
- Video switch incorporated (Y signal line 4 input, C signal line 3 input)
- Clamp circuit (Y signal line) Bias circuit (C signal line) incorporated
- Package Outline SDIP22
- Bipolar Technology

APPLICATION

- VCR (Correspond to S-VHS)
- Laser Disc

PIN FUNCTION

PIN NO.	FUNCTION	PIN NO.	FUNCTION
1	SWI	12 -	Y Line Sag Correction Pin
2	GND (Y Line)	13	GND (C Line)
3	Y Line Input Pin	14	NC
• 4	V ⁺ (L Line)	15	C Line Output Pin
5	Y Line Input Pin 3	16	c Line Gain Control
6	Clamp SW	17	c Line Input Pin 3
7	Y Line Input Pin	18	SW 2
8	SW 3	19	C Line Input Pin
9	Y Line Input Pin 4	20	NC
10	Y Line Gain Control	21	V ⁺ (C Line)
11	Y Line Output Pin	22	C Line Input Pin 1

RECOMMENDED OPERATING CONDITION

PARAMETER	SYMBOL	TEST CONDITION	MIN,	TYP.	MAX.	UNITS
Supply Voltage Range	V+		8.6	9.0	9.4	v
Y Signal Input Amlitude Range		Y _{IN}		—	3.0	Vp.p
Y Signal Output Amplitude Range		Yout			3.0	Vp.p
C Signal Input Amplitude Range		CIN	. —	_	2.0	Vp.p
C Signal Output Amplitude Range		Солт			2.5	Vp.p
Gain Control Voltage Range		TP10, TP21 Input Voltage	2.0		3.0	V

TERMINAL FUNCTION

PIN	PIN NAME	SYMBOL	FUNCTION
1	SWI	SWI	Video switch channel change over input. The L level is identified to be input when being left on at open state.
2	GND (Y Line)	GND Y	
3	Y Line Input Pin	Yinl	Video signal input pin (Y line) Key Clamp circuit internalized. The clamp function goes on when the key clamp is on H timing. Kyed clamp at L position indicates the normal sink chip clamp on operatior. The clamp voltage is about 4.1V.
4	V _{CC} (Y Line)		Y line alone can not be used when C line supply voltage is of state.
5	Y Line Input Pin 3	Yin 3	Video signal input pin (Y line) The IC does not have bias or clamp function circuit in it, and its easy to have the external circuit, of the brightness level setting. It is most suitable for superinpose input.
6	Clamp Switch	Yin3	In case of L level, the sink chip clamp, Yin1, Yin2 on operation. In case of H level, Yin1, Yin2 become the clamp voltage compulsory. If the kye clamp function is not used, apply it with the L level on fixed condition.
7	Y Line Input Pin 2	Yin2	Video signal input pin (Y line) Key clamp circuit internalized. The clamp function goes on when the key clamp is on H timing. Keyed clamp at L position indicates the normal sink chip clamp on operatior. The clamp voltage is about 4.1V.
8	SW3	SW3	Video switch channel change over input. The L level is identified to be input when being left on open state.
9	Y Line Input Pin 4	Yin4	Video signal input pin (Y line) The IC does not have bias or clamp function circuit in it, and its easy to have the external circuit of the brightness level setting. It is most suitable for superimpose input.
10	Y Line Gain Control	GAIN Y	Y Line voltage gain can be adjusted when input of $2.0 \sim 3.0$ V. 2.0V input, at gain min. (-3.0dB) 3.0V input at gin max. (+3.0dB) In order to set the gain within the IC, the gain control circuit compares the voltage (Typ 2.5V), the one which was decided by the resistance the voltage (Typ 2.5V), the one which was decided by the resistance division, and the gain control pin voltage, and then it is advisable to apply voltage on the gain control pin after the process of the resistance division of the supply voltage.
11	Y Line Output Pin	Yout	Its the Y line video signal output pin. It can drive 75Ω line when connecting 25C945 & 2SC1815 directly. No sag output can be performed by applying Y line sag correction at 12 pin.
12	Y Line Sag Correcting Pin	Y SAGU	In case when applying as 75Ω driver by connecting 2SC945 to Yout, the sag can be generated by output coupling capacitance and load resistance. The output included the sag, when once again, being input at sag correction pin through coupling capacitance, and it can be done to take out the output from Y out in which that there is no sag at all. In case when the sag correction function is not required on operation, it is advisable to use it by connecting 11 pin directly.

TERMINAL FUNCTION

PIN	PIN NAME	SYMBOL	FUNCTION						
13	GND (C Line)	GND C							
14	NC		·						
15	CLine Output Pin	Cout	It's the C line video signal output pin. It can drive 75Ω line when connecting 2SC945 & 2SC1815 directly.						
	C line Output Pin	GAIN C	C line voltage gain can be adjusted when input 2.0~3.0V. 2.0V input at gain min. (+3.0dB) 3.0V input at gain max. (+9.0dB) In order to set the gain within the IC, the gain control circuit compares the voltage (Typ 2.5V), the one which was decided by the resistance division, and the gain control pin voltage, and then it is advisable to apply voltage on the gain control pin, after the process of resistance division of the supply voltage.						
17	C Line Input Pin 3	Cin3	Video signal input pin (C line) The IC does not have bias or clamp function circuit in it, and it's easy to set the brightness level with the external circuit. It is most suitable for superimpose input.						
18	SW2	SW2	The L level is identified to be input when being left on open state.						
19 .	C Line Input Pin 2	Cin2	Video signal input pin (C line) The bias voltage is about 4.1V, and the input impedance is about $15K\Omega$						
20	NC								
21	V ⁺ (C Line)	V+ C	C line alone can not be used while the Y line supply voltage is off state.						
22	C Line Input Pin 1	Cinl	C line Input Pin 1. Video signal input pin (C line) Bias voltage is about 4.1V, input impedance is about $15K\Omega$
