## LINEAR INTEGRATED CIRCUITS

### OPERATIONAL AMPLIFIERS

- SHORT CIRCUIT PROTECTION
- OFFSET VOLTAGE NULL CAPABILITY
- LARGE COMMON MODE AND DIFFERENTIAL VOLTAGE RANGE
- NO LATCH-UP
- SLEW-RATE =  $5.5V/\mu s$  ( $G_V = 10$ ,  $C_C = 3.5 pF$ )

The LS 148 series consists of general purpose operational amplifiers, intended for a wide range of analog applications where tailoring of frequency characteristics is desirable. High common mode voltage range and absence of "Latch-up" tendencies make the LS 148 series ideal for use as a voltage follower. The high gain and wide range of operating voltage provide superior performance in integrators, summing amplifiers and general feedback applications. Unity gain frequency compensation is achieved by means of a single 30 pF capacitor. The LS 148 series is available with hermetic gold chip (8000 series). This is particularly suitable for professional and telecom applications, wherever very high MTBF are required.

		TO-99	Minidip	$\mu$ package
$V_s$	Supply voltage		$\pm 22V$	
$V_I$ (1)	Input voltage		$\pm 15V$	
$\Delta V_I$	Differential input voltage		$\pm 30V$	
$T_{op}$	Operating temperature for LS 148/LS 148A for LS 148C		-55 to 125 °C 0 to 70 °C indefinite	
$P_{tot}$	Output short circuit duration (2)	520 mW	665 mW	400 mW
$T_{stg}$	Power dissipation at $T_{amb} = 70^\circ C$	-65 to 150 °C	-55 to 150 °C	-55 to 150 °C
	Storage temperature			

1) For supply voltage less than  $\pm 15V$ , input voltage is equal to the supply voltage

2) The short circuit duration is limited by thermal dissipation.
