### DESCRIPTION

The LCX86 is a low voltage CMOS QUAD EXCLUSIVE OR GATE fabricated with sub-micron silicon gate and double-layer metal

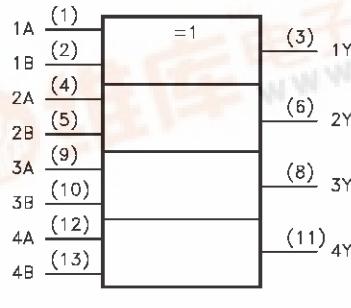

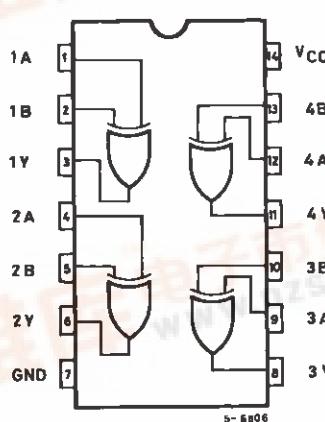

wiring C<sup>2</sup>MOS technology. It is ideal for low power and high speed 3.3V applications; it can be interfaced to 5V signal environment for inputs.

It has same speed performance at 3.3V than 5V AC/ACT family, combined with a lower power consumption.

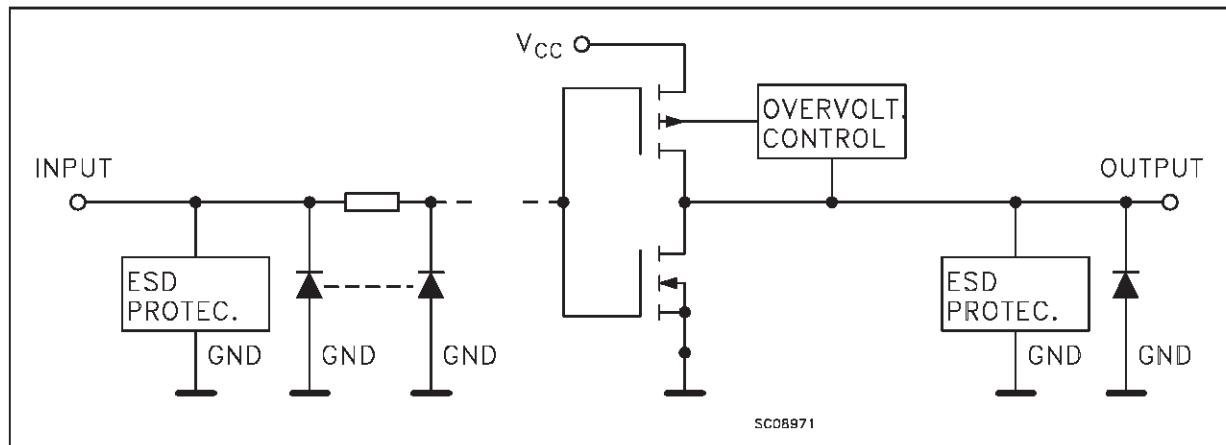

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
