Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.
Note 2: That voltage to which the output may be forced without damage to the device.
Note 3: Unless otherwise specified these specifications apply for $T_{j}=0^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ on $\mathrm{LM} 325, \mathrm{~V}_{\mathrm{IN}}= \pm 20 \mathrm{~V}, \mathrm{I}_{\mathrm{L}}=0 \mathrm{~mA}, \mathrm{I}_{\mathrm{MAX}}=100 \mathrm{~mA}, \mathrm{P}_{\mathrm{MAX}}=2.0 \mathrm{~W}$ for the H 10 Package.
Note 4: If the junction temperature exceeds $150^{\circ} \mathrm{C}$, the output short circuit duration is 60 seconds.
Note 5: Without a heat sink, the thermal resistance junction to ambient of the H 10 Package is about $155^{\circ} \mathrm{C} / \mathrm{W}$. With a heat sink, the effective thermal resistance can only approach the junction to case values specified, depending on the efficiency of the sink

$I_{C L}=\frac{\text { Current Limit Sense Voltage (See Curve) }}{R_{C L}}$
$\dagger$ Solid tantalum
t†Short pins 6 and 7 on dip
$\dagger \dagger \dagger R_{C L}$ can be added to the basic regulator between pins 6 and 5,1 and 2 to reduce current limit.
*Required if regulator is located an appreciable distance from power supply filter.
**Although no capacitor is needed for stability, it does help transient response. (If needed use $1 \mu \mathrm{~F}$ electrolytic.)
${ }^{* * *}$ Although no capacitor is needed for stability, it does help transient response. (If needed use $10 \mu \mathrm{~F}$ electrolytic.)

## LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
