

3 V/5 V, 4/8 Channel High Performance Analog Multiplexers

ADG608/ADG609

FEATURES

- +3 V, +5 V, ±5 V Power Supplies
- V_{SS} to V_{DD} Analog Signal Range
- Low On Resistance (30 Ω max)
- Fast Switching Times
 - t_{ON} 75 ns max
 - t_{OFF} 45 ns max
- Low Power Dissipation (1.5 μW max)
- Break-Before-Make Construction
- ESD > 5000 V as per Military Standard 3015.7
- TTL and CMOS Compatible Inputs

APPLICATIONS

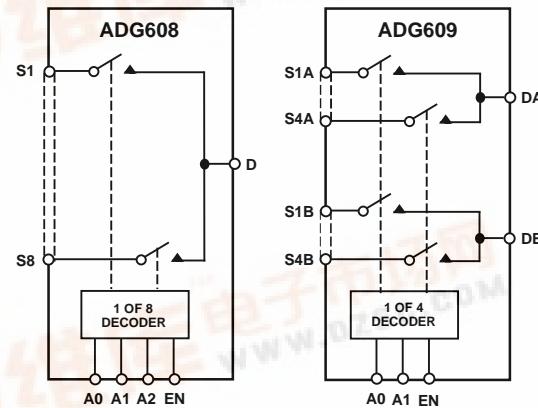

- Automatic Test Equipment
- Data Acquisition Systems
- Communication Systems
- Avionics and Military Systems
- Microprocessor Controlled Analog Systems
- Medical Instrumentation
- Battery Powered Instruments
- Remote Powered Equipment
- Compatible with ±5 V DACs and ADCs such as AD7840/8, AD7870/1/2/4/5/6/8

GENERAL DESCRIPTION

The ADG608 and ADG609 are monolithic CMOS analog multiplexers comprising eight single channels and four differential channels respectively, fully specified for ±5 V, +5 V and +3 V power supplies. The ADG608 switches one of eight inputs to a common output as determined by the 3-bit binary address lines A0, A1 and A2. The ADG609 switches one of four differential inputs to a common differential output as determined by the 2-bit binary address lines A0 and A1. An EN input on both devices is used to enable or disable the device. When disabled, all channels are switched OFF. All the address and enable inputs are TTL compatible over the full specified operating temperature range, making the parts suitable for bus-controlled systems such as data acquisition systems, process controls, avionics and ATEs since the TTL compatible address inputs simplify the digital interface design and reduce the board space requirements.

The ADG608/ADG609 are designed on an enhanced LC²MOS process that provides low power dissipation yet gives high switching speed and low on resistance. Each channel conducts equally well in both directions when ON and has an input signal range which extends to the supplies. In the OFF condition, signal levels up to the supplies are blocked. All channels exhibit break-before-make switching action preventing momentary shorting when switching channels. Inherent in the design is low charge injection for minimum transients when switching the digital inputs.

FUNCTIONAL BLOCK DIAGRAMS

The ability to operate from single +3 V, +5 V or ±5 V bipolar supplies makes the ADG608 and ADG609 perfect for use in battery operated instruments and with the new generation of DACs and ADCs from Analog Devices. The use of 5 V supplies and reduced operating currents gives much lower power dissipation than devices operating from ±15 V supplies.

PRODUCT HIGHLIGHTS

1. Extended Signal Range
The ADG608/ADG609 are fabricated on an enhanced LC²MOS process giving an increased signal range which extends to the supplies.
2. Low Power Dissipation
3. Low R_{ON}
4. Fast Switching Times
5. Break-Before-Make Switching
Switches are guaranteed break-before-make so that input signals are protected against momentary shorting.
6. Single/Dual Supply Operation

ORDERING GUIDE

| Model | Temperature Range | Package Option* |
|-----------|-------------------|-----------------|
| ADG608BN | -40°C to +85°C | N-16 |
| ADG608BR | -40°C to +85°C | R-16A |
| ADG608BRU | -40°C to +85°C | RU-16 |
| ADG608TRU | -55°C to +125°C | RU-16 |
| ADG609BN | -40°C to +85°C | N-16 |
| ADG609BR | -40°C to +85°C | R-16A |
| ADG609BRU | -40°C to +85°C | RU-16 |

*N = Plastic DIP; RU = Thin Shrink Small Outline Package (TSSOP);
R = 0.15" Small Outline IC (SOIC).

NOTES

¹Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those listed in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Only one absolute maximum rating may be applied at any one time.

²Overtvoltages at A, S, D or EN will be clamped by internal diodes. Current should be limited to the maximum ratings given.

TERMINOLOGY

| | | | |
|--------------------------------------|--|--------------------------------------|---|
| V _{DD} | Most positive power supply potential. | t _{OFF} (EN) | Delay time between the 50% and 90% points of the digital input and switch “OFF” condition. |
| V _{SS} | Most negative power supply potential in dual supplies. In single supply applications, it may be connected to ground. | t _{TRANSITION} | Delay time between the 50% and 90% points of the digital inputs and the switch “ON” condition when switching from one address state to another. |
| GND | Ground (0 V) reference. | t _{OPEN} | “OFF” time measured between the 80% points of both switches when switching from one address state to another. |
| R _{ON} | Ohmic resistance between D and S. | V _{INL} | Maximum input voltage for logic “0.” |
| ΔR _{ON} | R _{ON} variation due to a change in the analog input voltage with a constant load current. | V _{INH} | Minimum input voltage for logic “1.” |
| R _{ON} Match | Difference between the R _{ON} of any two channels. | I _{INL} (I _{INH}) | Input current of the digital input. |
| I _S (OFF) | Source leakage current when the switch is off. | Crosstalk | A measure of unwanted signal which is coupled through from one channel to another as a result of parasitic capacitance. |
| I _D (OFF) | Drain leakage current when the switch is off. | Off Isolation | A measure of unwanted signal coupling through an “OFF” channel. |
| I _D , I _S (ON) | Channel leakage current when the switch is on. | Charge Injection | A measure of the glitch impulse transferred from the digital input to the analog output during switching. |
| V _D , V _S | Analog voltage on terminals D, S. | I _{DD} | Positive supply current. |
| C _S (OFF) | Channel input capacitance for “OFF” condition. | I _{SS} | Negative supply current. |
| C _D (OFF) | Channel output capacitance for “OFF” condition. | | |
| C _D , C _S (ON) | “ON” switch capacitance. | | |
| C _{IN} | Digital input capacitance. | | |
| t _{ON} (EN) | Delay time between the 50% and 90% points of the digital input and switch “ON” condition. | | |

OUTLINE DIMENSIONS

Dimensions shown in inches and (mm).

16-Pin Plastic (N-16)**16-Pin SOIC (R-16A)****16-Pin TSSOP (RU-16)**
