

SINGLE-SUPPLY QUAD OPERATIONAL AMPLIFIER

■ GENERAL DESCRIPTION

The NJM324 consists of four independent, high gain, internally frequency compensated operational amplifiers which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage.

Application areas include transducer amplifiers, DC gain blocks and all the conventional op amp circuits which now can be more easily implemented in single power supply systems. For example, the NJM324 can be directly operated off of the standard +5V_{DC} power supply voltage which is used in digital systems and will easily provide the required interface electronics without requiring the additional ±15V_{DC} power supplies.

■ FEATURES

- Single Supply Operation
- Operating Voltage (+3V ~ +32V)
- Low Operating Current (0.7mA typ.)
- Package Outline DIP14, DMP14, SSOP14
- Bipolar Technology

■ PIN CONFIGURATION

PIN FUNCTION

1. A OUTPUT
2. A -INPUT
3. A +INPUT
4. V⁺
5. B + INPUT
6. B - INPUT
7. B OUTPUT
8. C OUTPUT
9. C - INPUT
10. C + INPUT
11. GND
12. D + INPUT
13. D - INPUT
14. D OUTPUT
