GENERAL DESCRIPTION

The ADG888 is a low voltage, dual DPDT (double pole double throw) CMOS device optimized for high performance audio switching. With its low power and small physical size, it is ideal for portable devices.

This device offers ultralow on resistance of less than 0.8 Ω over the full temperature range making it an ideal solution for applications requiring minimal distortion through the switch. The ADG888 also has the capability of carrying large amounts of current, typically 400 mA at 5 V operation.

When on, each switch conducts equally well in both directions and has an input signal range that extends to the supplies. The ADG888 exhibits break-before-make switching action.

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The ADG888 is available in a 4 × 4 bump, 2.0 mm × 2.0 mm WLCSP; a 4 mm × 4 mm, 16-lead LFCSP; and a 16-lead TSSOP. These packages make the ADG888 the ideal solution for space-constrained applications.

PRODUCT HIGHLIGHTS

1. $<0.6 \Omega$ over full temperature range of -40°C to $+125^{\circ}\text{C}$.
2. High current handling capability (400 mA continuous current at 5 V).
3. Low THD + N (0.008% typical).
4. Tiny 2 mm × 2 mm, 16-ball WLCSP package, and 16-lead LFCSP and TSSOP packages.

¹ Overvoltages at IN, S, or D are clamped by internal diodes. Limit current to the maximum ratings given.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Only one absolute maximum rating may be applied at any one time.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
