GENERAL DESCRIPTION

The ADD8710 is a low cost, 10-channel gamma buffer with a V_{COM} driver that operates from a single supply. The part is designed for high resolution TFT LCD panels and is built on an advanced, high voltage CBCMOS process.

The gamma buffers have a high slew rate, minimum 10 mA output current, and a high capacitive load drive capability. The V_{COM} buffer is capable of delivering 250 mA of peak current and can also drive large capacitive loads. The ADD8710 offers wide supply range and offset voltages below 12 mV.

The ADD8710 is specified over the -40°C to $+85^{\circ}\text{C}$ temperature range and is available in a Pb-free, 28-lead TSSOP package.

Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Table 3. Package Characteristics

Package Type	θ_{JA} ¹	Unit

¹ θ_{JA} is specified for worst-case conditions, i.e., θ_{JA} is specified for devices soldered onto a circuit board for surface-mount packages.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
