12-stage shift-and-store register LED driver

HEF4894B

APPLICATIONS

- Automotive
- Industrial

GENERAL DESCRIPTION

The HEF4894B is a 12 stage serial shift register having a storage latch associated with each stage for strobing data from the serial input to parallel LED driver outputs O_0 to O_{11} . Data is shifted on positive-going clock transitions. The data in each shift register stage is transferred to the storage register when the strobe (STR) input is HIGH. Data in the storage register appears at the outputs whenever the output enable (EO) signal is HIGH.

Two serial outputs (O_s and O_s') are available for cascading a number of HEF4894B devices. Data is available at O_s on positive-going clock edges to allow high-speed operation in cascaded systems in which the clock rise time is fast. The same serial information is available at O_s' on the next negative-going clock edge and provides cascading HEF4894B devices when the clock rise time is slow.

ORDERING AND PACKAGE INFORMATION

TYPE NUMBER	PACKAGES			
	PINS	PIN POSITION	MATERIAL	CODE
HEF4894BT	20	SO	plastic	SO20/SOT163A
HEF4894BP	20	DIL	plastic	DIL20/SOT146

PINNING

PIN	SYMBOL	NAME AND FUNCTION
1	STR	strobe input
2	D	data input
3	CP	clock input
4, 5, 6, 7, 8, 9, 18, 17, 16, 15, 14, 13	O_0 to O_{11}	parallel outputs (open drain)
10	V_{SS}	ground
11, 12	O_s, O_s'	serial outputs
19	EO	output enable input
20	V_{DD}	positive supply voltage

FAMILY DATA

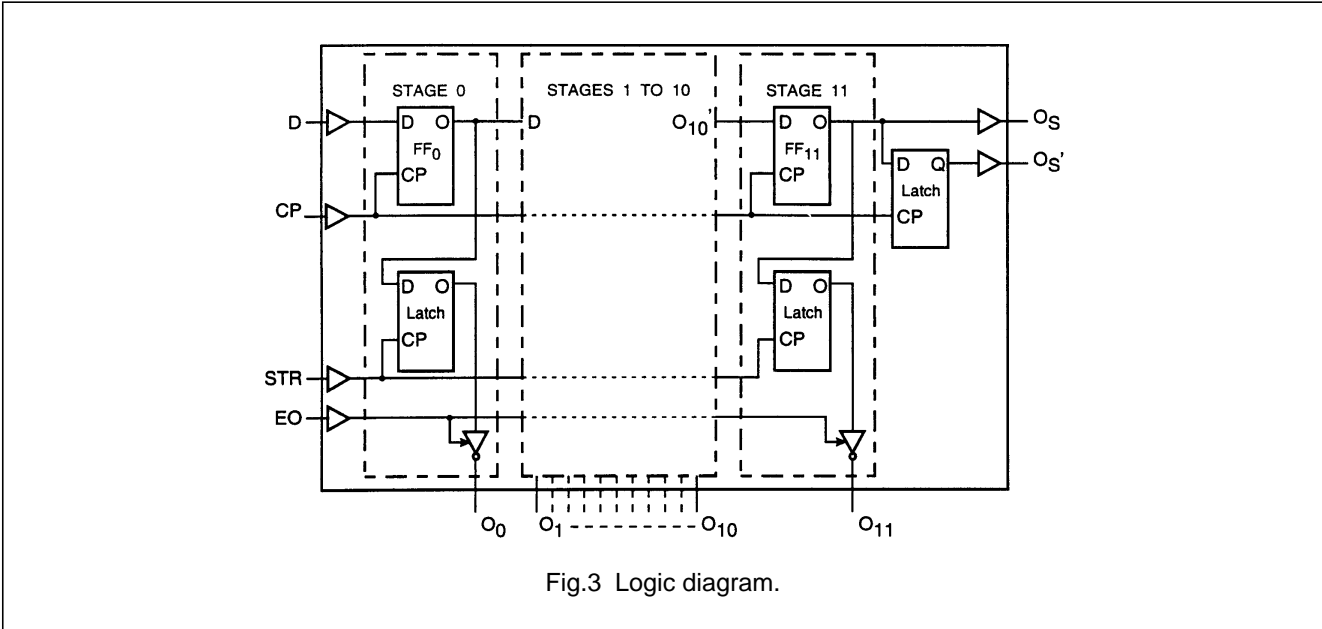

See Family Specifications except for:
 Rating for DC current into any open-drain output: 40 mA.

I_{DD} LIMITS category MSI: see Family Specifications.

12-stage shift-and-store register LED driver

HEF4894B

FUNCTION TABLE

INPUTS				PARALLEL OUTPUTS		SERIAL OUTPUTS	
CP	EO	STR	D	O ₀	O _n	O _s	O _s '
↑	L	X	X	Z	Z	O ₁₀ '	nc
↓	L	X	X	Z	Z	nc	O ₁₁
↑	H	L	X	nc	nc	O ₁₀ '	nc
↑	H	H	L	Z	O _{n-1}	O ₁₀ '	nc
↑	H	H	H	L	O _{n-1}	O ₁₀ '	nc
↓	H	H	H	nc	nc	nc	O ₁₁

Notes

1. H = HIGH state (the more positive voltage)
2. L = LOW state (the less positive voltage)
3. X = state is immaterial
4. ↑ = positive-going transition
5. ↓ = negative-going transition
6. Z = high impedance OFF state
7. nc = no change
8. O₁₁' = the information in the twelfth shift register stage.

At the positive clock edge the information in the 10th register stage is transferred to the 11th register stage and the O_s output.
