

8-bit Proprietary Microcontroller

CMOS

F²MC-8L MB89930A Series

MB89935A/935B/P935A/PV930A

■ DESCRIPTION

The MB89930A series is a line of single-chip microcontrollers. In addition to a compact instruction set, the microcontrollers contain a variety of peripheral functions such, timers, a serial interface, an A/D converter and an external interrupt.

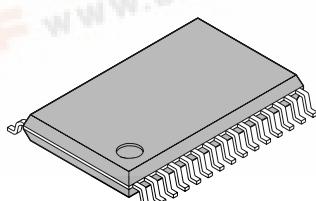

■ FEATURES

- MB89600 Series CPU core
- Maximum memory space : 64 Kbytes
- Minimum execution time : 0.4 μ s/10 MHz
- Interrupt processing time : 3.6 μ s/10 MHz
- I/O ports : max. 21channels
- 21-bit timebase timer
- 8-bit PWM timer
- 8/16-bit capture timer/counter
- 10-bit A/D converter : 8 channels
- UART
- 8-bit serial I/O
- External interrupt 1 : 3 channels
- External interrupt 2 : 8 channels
- Wild Register : 2 bytes

(Continued)

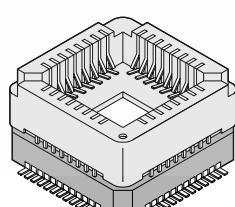

■ PACKAGE

30-pin plastic SSOP

(FPT-30P-M02)

48-pin ceramic MQFP

(MQP-48C-P01)

MB89930A Series

(Continued)

- Low-power consumption modes (sleep mode, and stop mode)
- SSOP-30 and MQFP-48 package
- CMOS Technology

■ PRODUCT LINEUP

| Parameter \ Part number | MB89935A | MB89935B | MB89P935A | MB89PV930A |
|--|---|---|---|------------|
| Classification | Mass production product (mask ROM product) | One-time PROM product (for small-scale production) | Piggyback/evaluation product (for development) | |
| ROM size | 16 K × 8 bits (internal mask ROM) | 16 K × 8 bits (internal PROM) | 32 K × 8 bits (external EPROM) | |
| RAM size | 512 × 8 bits | | | |
| CPU functions | Number of instructions : 136 Instruction bit length : 8 bits Instruction length : 1 to 3 bytes Data bit length : 1, 8, 16 bits Minimum execution time : 0.4 µs to 6.4 µs (10 MHz) Interrupt processing time : 3.6 µs to 57.6 µs (10 MHz) | | | |
| Ports | General-purpose I/O ports (CMOS) : 21 (also serve as peripherals) (4 ports are also an N-ch open-drain type.) | | | |
| 21-bit time base timer | 21-bit Interrupt cycle : 0.82 ms, 3.3 ms, 26.2 ms, or 419.4 ms with 10-MHz main clock | | | |
| Watching timer | Reset generation cycle : 419.4 ms minimum with 10-MHz main clock | | | |
| 8-bit PWM timer | 8-bit interval timer operation (square output capable, operating clock cycle : 0.4 µs , 3.2 µs, 6.4 µs, 25.6 µs) 8-bit resolution PWM operation (conversion cycle : 102.4 µs to 26.84 ms) Count clock selectable between 8-bit and 16-bit timer/counter outputs | | | |
| 8/16-bit capture, timer/counter | 8-bit capture timer/counter × 1 channel + 8-bit timer or 16-bit capture timer/counter × 1 channel Capable of event count operation and square wave output using external clock input with 8-bit timer 0 or 16-bit counter | | | |
| UART | Transfer data length : 6/7/8 bits | | | |
| 8-bit Serial I/O | 8 bits LSB first/MSB first selectable One clock selectable from four operation clocks (one external shift clock, three internal shift clocks : 0.8 µs, 6.4 µs, 25.6 µs) | | | |
| 12-bit PPG timer | Output frequency : Pulse width and cycle selectable | | | |
| External interrupt 1 (wake-up function) | 3 channels (Interrupt vector, request flag, request output enabled) Edge selectable (Rising edge, falling edge, or both edges) Also available for resetting stop/sleep mode (Edge detectable even in stop mode) | | | |
| External interrupt 2 (wake-up function) | 1 channel with 8 inputs (Independent L-level interrupt and input enable) Also available for resetting stop/sleep mode (Level detectable even in stop mode) | | | |

■ DIFFERENCES AMONG PRODUCTS

1. Memory Size

Before evaluating using the piggyback product, verify its differences from the product that will actually be used.

2. Current Consumption

In the case of the MB89PV930A, add the current consumed by the EPROM which is connected to the top socket.

3. Mask Options

Functions that can be selected as options and how to designate these options vary by the product. Before using options check section "■ MASK OPTIONS". Take particular care on the following points :

Options are fixed on the MB89PV930A and MB89P935A.

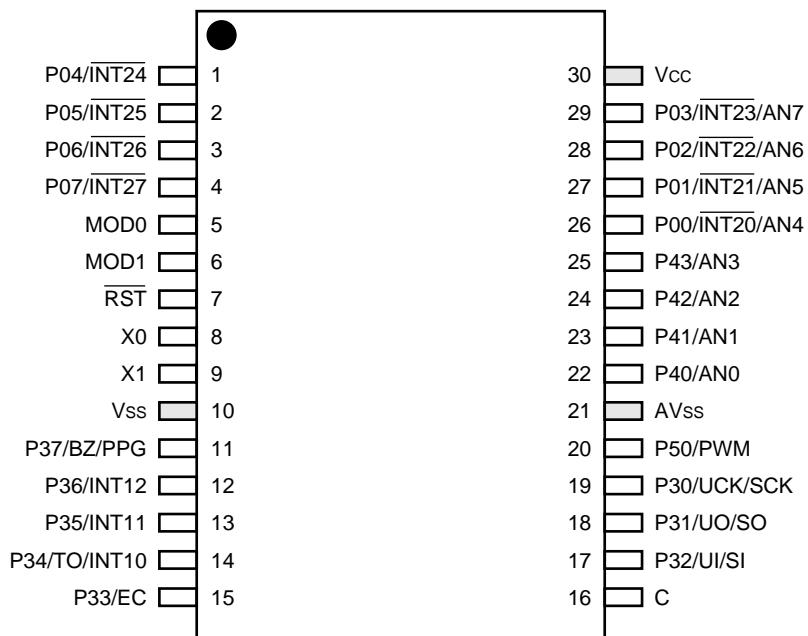

4. Difference between MB89935A and MB89935B

MB89935B is different from MB89935A in that the internal circuit and oscillator have been changed and the radiated noise and current consumption while oscillation is active is reduced. For details of the characteristics of current consumption, see "■ EXAMPLE CHARACTERISTICS".

■ PIN DESCRIPTION

| Pin No. | | Pin name | Circuit type | Function |
|--------------------|--------------------|--------------------------------|--------------|---|
| SSOP ^{*1} | MQFP ^{*2} | | | |
| 8 | 32 | X0 | A | Pins for connecting the crystal resonator for the main clock. To use an eternal clock, input the signal to X0 and leave X1 open. |
| 9 | 33 | X1 | | |
| 5 | 29 | MOD0 | B | Memory access mode setting input pins. Connect the pin directly to Vss. |
| 6 | 30 | MOD1 | | |
| 7 | 31 | RST | C | Reset I/O pin. This pin serves as an N-channel open-drain output with pull-up resistor and a hysteresis input as well. The pin outputs the "L" signal (optionally) in response to an internal reset request. Also, it initializes the internal circuit upon input of the "L" signal. |
| 26 to 29 | 10 to 13 | P00/INT20/AN4 to P03/INT23/AN7 | G | General-purpose CMOS I/O ports. These pins also serve as an input (wake-up input) of external interrupt 2 or as an A/D converter analog input. The input of external interrupt 2 is a hysteresis input. |
| 1 to 4 | 25 to 28 | P04/INT24 to P07/INT27 | D | General-purpose CMOS I/O ports. These pins also serve as an input (wake-up input) of external interrupt 2. The input of external interrupt 2 is a hysteresis input. |
| 19 | 5 | P30/UCK/SCK | D | General-purpose CMOS I/O ports. This pin also serves as the clock I/O pin for the UART or 8-bit serial I/O. The resource is a hysteresis input. |
| 18 | 4 | P31/UO/SO | E | General-purpose CMOS I/O ports. This pin also serves as the data output pin for the UART or 8-bit serial I/O. |
| 17 | 3 | P32/UI/SI | D | General-purpose CMOS I/O ports. This pin also serves as the data input pin for the UART or 8-bit serial I/O. The resource is a hysteresis input. |
| 15 | 2 | P33/EC | D | General-purpose CMOS I/O ports. This pin also serves as the external clock input pin for the 8/16-bit capture timer/counter. The resource is a hysteresis input. |
| 14 | 1 | P34/TO/INT10 | D | General-purpose CMOS I/O ports. This pin also serves as the output pin for the 8/16-bit capture timer/counter or as the input pin for external interrupt 1. The resource is a hysteresis input. |
| 13, 12 | 48, 35 | P35/INT11, P36/INT12 | D | General-purpose CMOS I/O ports. These pins also serve as the input pin for external interrupt 1. The resource is a hysteresis input. |

■ HANDLING DEVICES

1. Preventing Latchup

Latchup may occur on CMOS ICs if voltage higher than V_{CC} or lower than V_{SS} is applied to input and output pins other than medium- and high-voltage pins or if higher than the voltage which shows on "1. Absolute Maximum Ratings" in section "■ ELECTRICAL CHARACTERISTICS" is applied between V_{CC} and V_{SS} .

When latchup occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

Also, take care to prevent the analog input from exceeding the digital power supply (V_{CC}) when the analog system power supply is turned on and off.

2. Treatment of Unused Input Pins

Leaving unused input terminals open may lead to permanent damage due to malfunction and latchup; pull up or pull down the terminals through the resistors of $2\text{ k}\Omega$ or more.

Make the unused I/O terminal in a state of output and leave it open and if it is in an input state, handle it with the same procedure as the input terminals.

3. Treatment of N.C. Pins

Be sure to leave (internally connected) N.C. pins open.

4. Power Supply Voltage Fluctuations

Although V_{CC} power supply voltage is assured to operate within the rated range, a rapid fluctuation of the voltage could cause malfunctions, even if it occurs within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that V_{CC} ripple fluctuations (P-P value) will be less than 10% of the standard V_{CC} value at the commercial frequency (50 to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

5. Treatment of Power Supply Pins on Microcontrollers with A/D Converters

Connect to be $AV_{SS} = V_{SS}$ even if the A/D converters are not in use.

6. Precautions when Using an External Clock

When an external clock is used, oscillation stabilization time is required even for power-on reset (optional) and wake-up from stop mode.

7. About the Wild Register Function

No wild register can be debugged on the MB89PV930A. For the operation check, test the MB89P935A installed on a target system.

8. Program Execution in RAM

When the MB89PV930A is used, no program can be executed in RAM.

MB89930A Series

■ PROGRAMMING TO THE EPROM WITH PIGGYBACK/EVALUATION DEVICE

1. EPROM for Use

MBM27C256A-20TVM

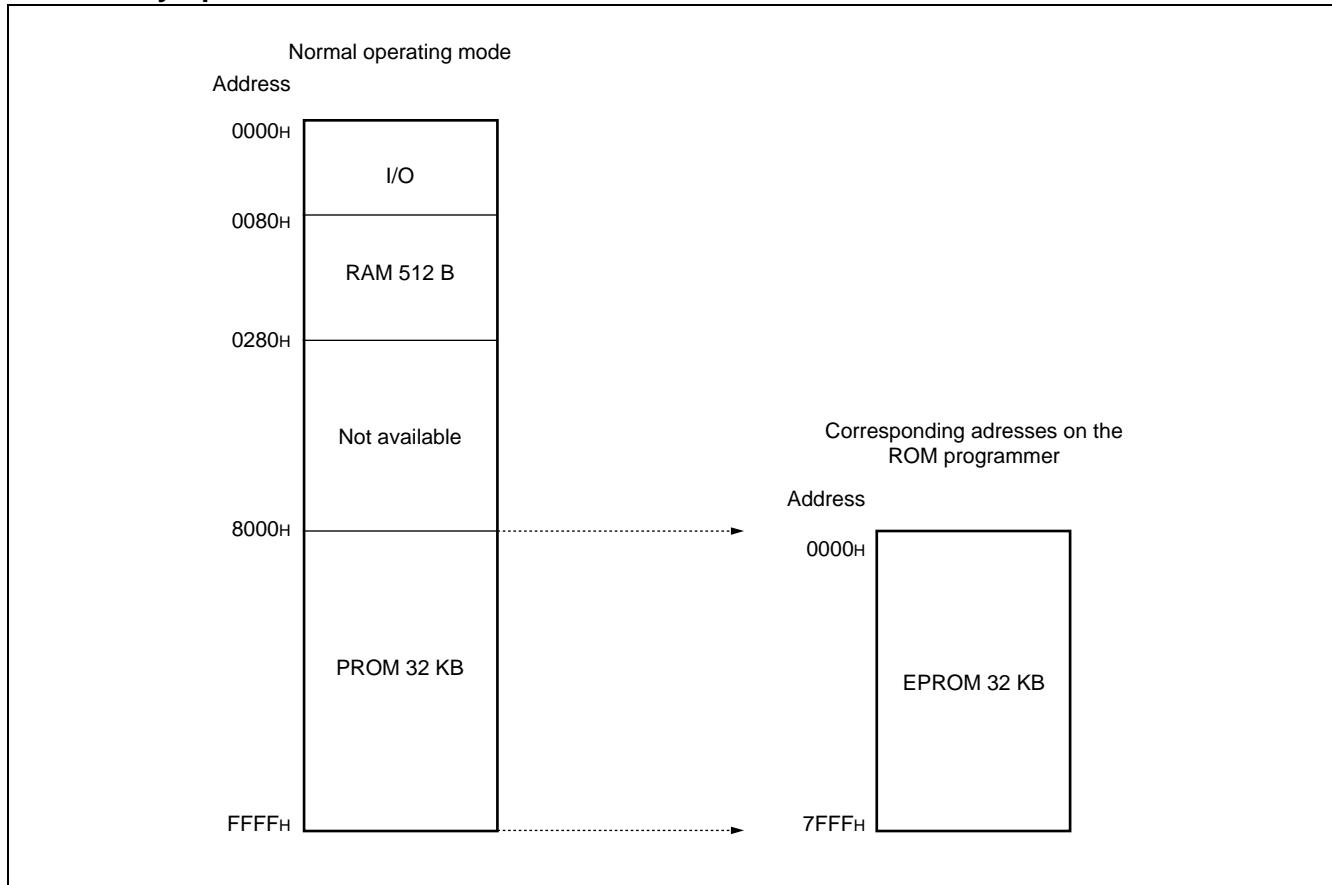

2. Programming Socket Adapter

To program to the PROM using an EPROM programmer, use the socket adapter (manufacturer : Sun Hayato Co., Ltd.) listed below.

| Package | Compatible socket part number |
|---------|-------------------------------|
| LCC-32 | ROM-32LC-28DP-S |

Inquiry : Sun Hayato Co., Ltd. : TEL (81) -3-3986-0403
FAX (81) -3-5396-9106

3. Memory Space.

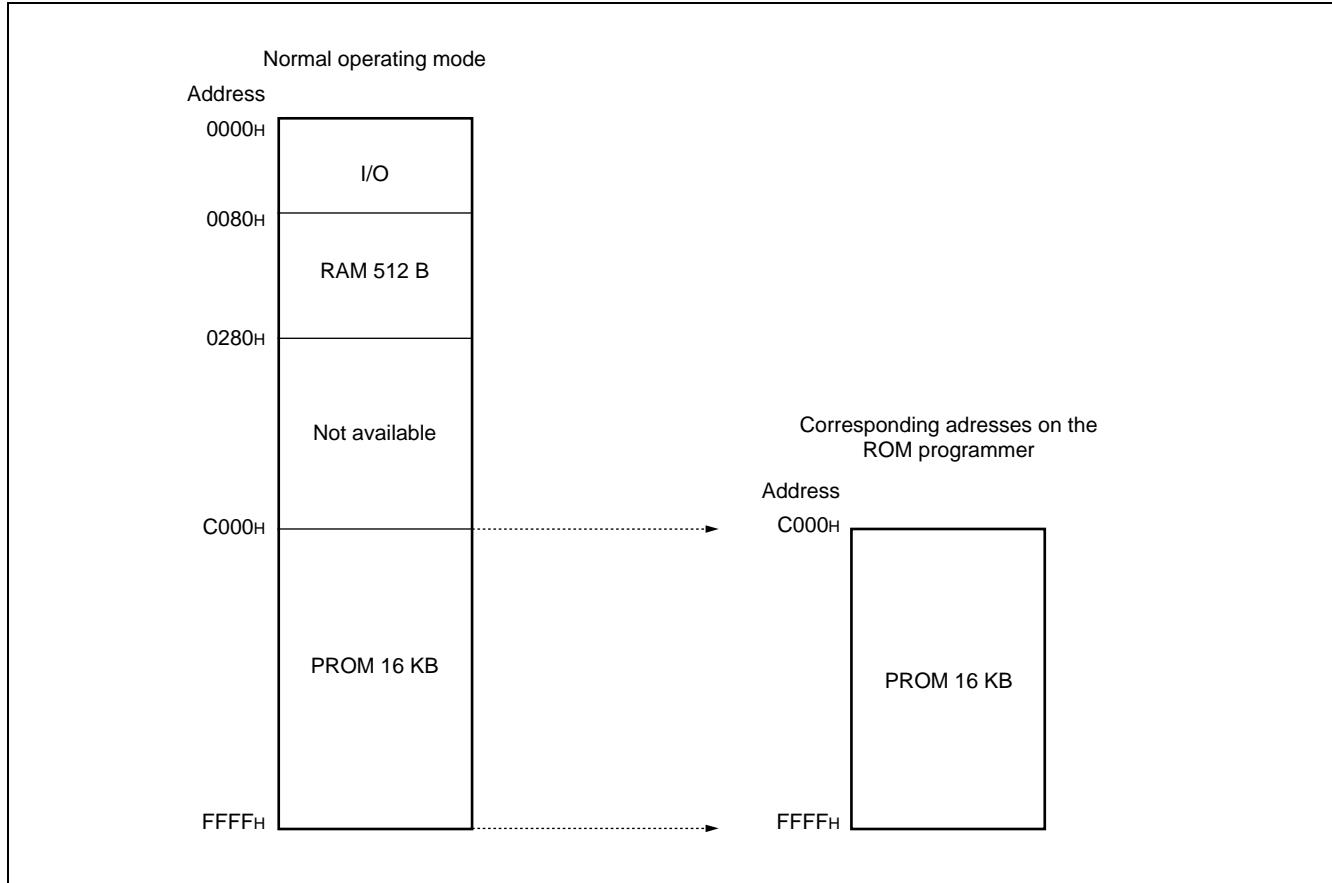

4. Programming to the EPROM

- (1) Set the EPROM programmer to the MBM27C256A.
- (2) Load program data into the EPROM programmer at 0000_H to 7FFF_H.
- (3) Program to 0000_H to 7FFF_H with the EPROM programmer.

MB89930A Series

■ PROGRAMMING TO THE OTPROM WITH MB89P935A

1. Memory Space

2. Programming to the OTPROM

To program to the OTPROM using an EPROM programmer AF200 (manufacturer : Yokogawa Digital Computer Corp.) .

Inquiry : Yokogawa Digital Computer Corp. : TEL (81) -42-333-6224

Note : Programming to the OTPROM with MB89P935A is serial programming mode only.

3. Programming Adaptor for OTPROM

To program to the OTPROM using an EPROM programmer AF200, use the programming adapter (manufacturer : Sun Hayato Co., Ltd.) listed below.

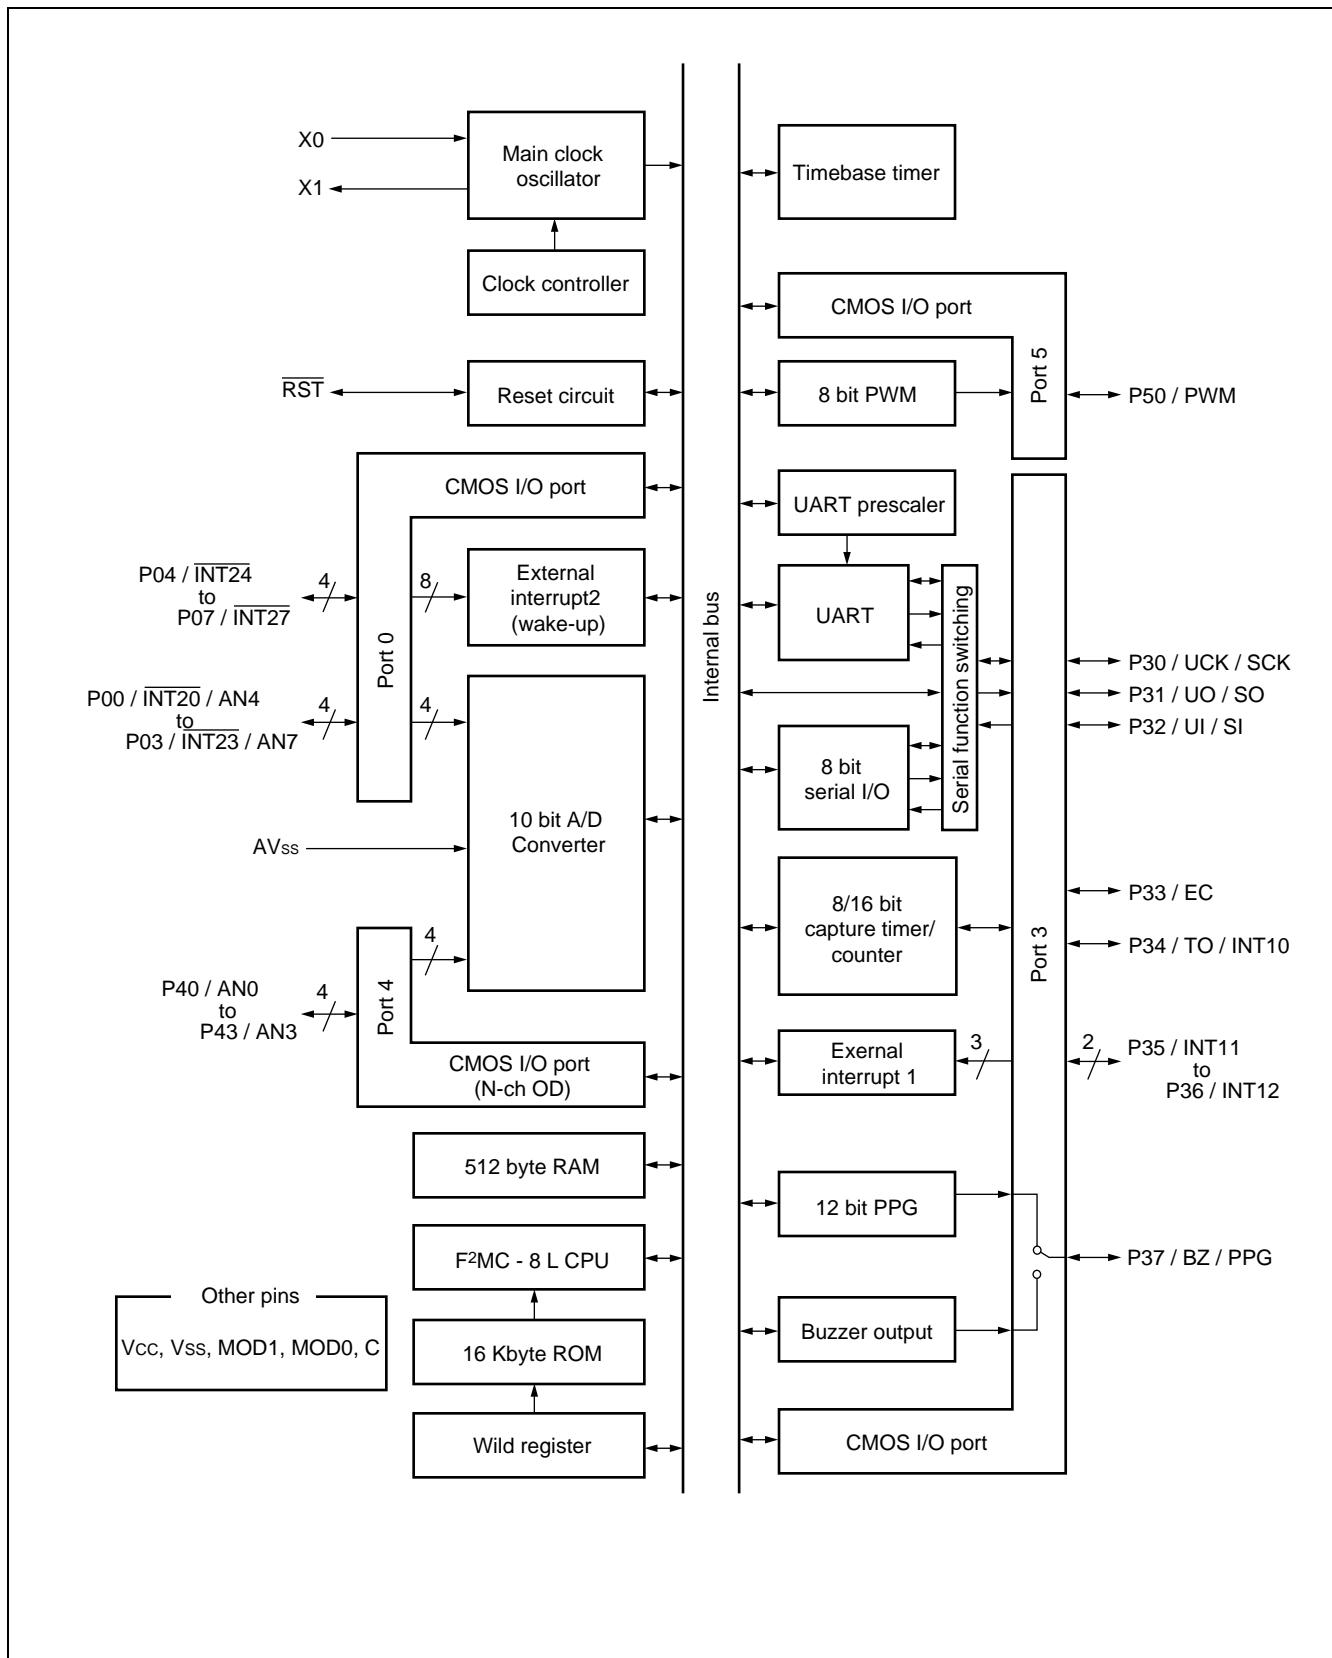

Adaptor socket : ROM3-FPT30M02-8L

Inquiry : Sun Hayato Co., Ltd. : TEL (81) -3-3986-0403

FAX (81) -3-5396-9106

MB89930A Series

■ BLOCK DIAGRAM

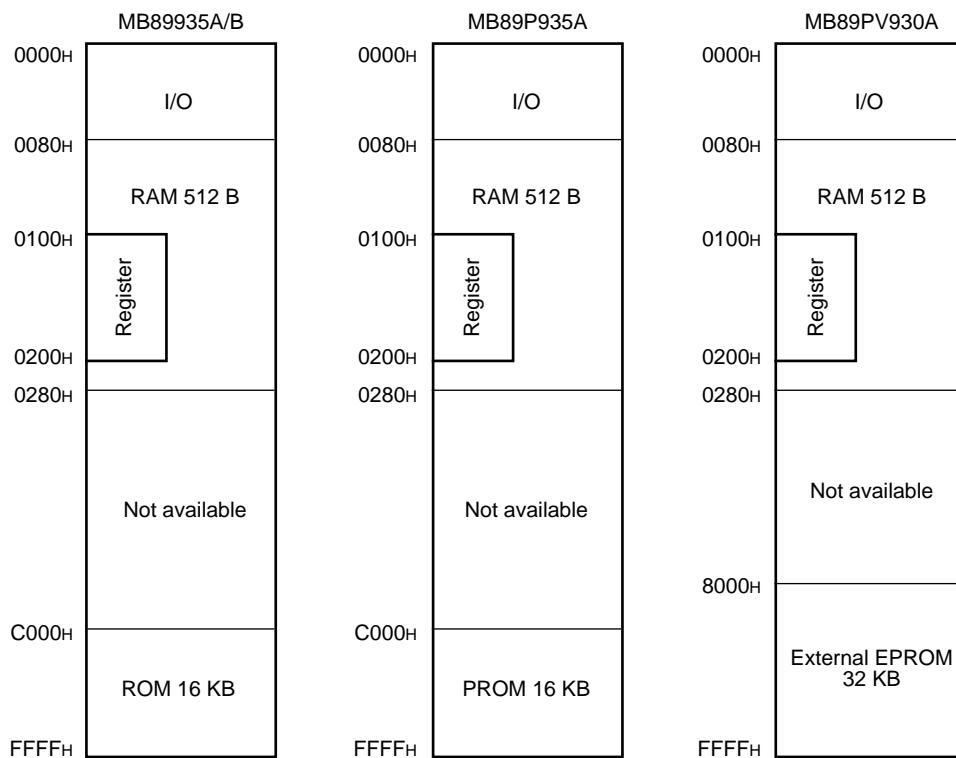

MB89930A Series

■ CPU CORE

1. Memory Space

The microcontrollers of the MB89930A series offer a memory space of 64 Kbytes for storing all of I/O, data, and program areas. The I/O area is located at the lowest address. The data area is provided immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is located at exactly the opposite end, that is, near the highest address. Provide the tables of interrupt reset vectors and vector call instructions toward the highest address within the program area. The memory space of the MB89930A series is structured as illustrated below.

- **Memory Space**

MB89930A Series

2. Registers

The MB89930A series has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The following dedicated registers are provided :

Program counter (PC) : A 16-bit register for indicating instruction storage positions

Accumulator (A) : A 16-bit temporary register for storing arithmetic operations, etc. When the instruction is an 8-bit data processing instruction, the lower byte is used.

Temporary accumulator (T) : A 16-bit register which performs arithmetic operations with the accumulator
When the instruction is an 8-bit data processing instruction, the lower byte is used.

Index register (IX) : A 16-bit register for index modification

Extra pointer (EP) : A 16-bit pointer for indicating a memory address

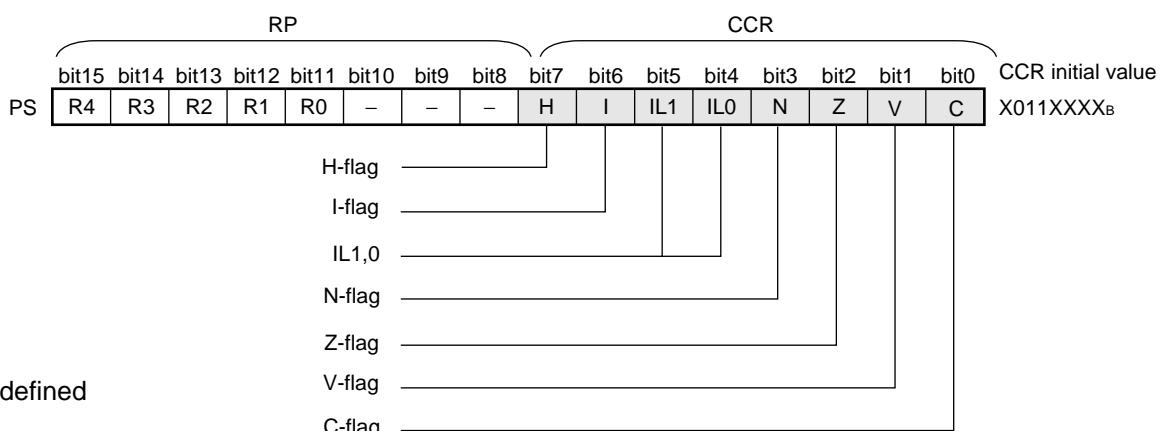

Stack pointer (SP) : A 16-bit register for indicating a stack area

Program status (PS) : A 16-bit register for storing a register pointer, a condition code

| 16 bit | | Initial value |
|--------|-------------------------|--|
| | : Program counter | FFFD _H |
| | : Accumulator | Indeterminate |
| | : Temporary accumulator | Indeterminate |
| | : Index register | Indeterminate |
| | : Extra pointer | Indeterminate |
| | : Stack pointer | Indeterminate |
| | : Program status | I-flag = 0, IL1, 0 = 11 The other bit values are indeterminate. |

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR) . (See the diagram below.)

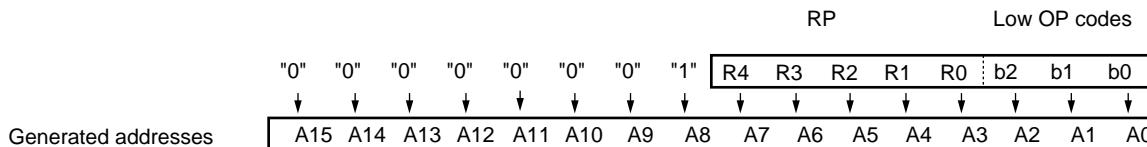

• Structure of the Program Status Register

MB89930A Series

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

- Rule for Conversion of Actual Addresses of the General-purpose Register Area

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data and bits for control of CPU operations at the time of an interrupt.

H-flag : Set to "1" when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. This flag is for decimal adjustment instructions.

I-flag : Interrupt is enabled when this flag is set to "1". Interrupt is disabled when the flag is cleared to "0". Cleared to "0" at the reset.

IL1, 0 : Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

| IL1 | IL0 | Interrupt level | High-low |
|-----|-----|-----------------|--------------------|
| 0 | 0 | 1 | High |
| 0 | 1 | | |
| 1 | 0 | 2 | |
| 1 | 1 | 3 | Low = no interrupt |

N-flag : Set to "1" if the MSB becomes to "1" as the result of an arithmetic operation. Cleared to "0" when the bit is cleared to "0".

Z-flag : Set to "1" when an arithmetic operation results in 0. Cleared otherwise.

V-flag : Set to "1" if the complement on 2 overflows as a result of an arithmetic operation. Cleared to "0" if the overflow does not occur.

C-flag : Set to "1" when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. Set to the shift-out value in the case of a shift instruction.

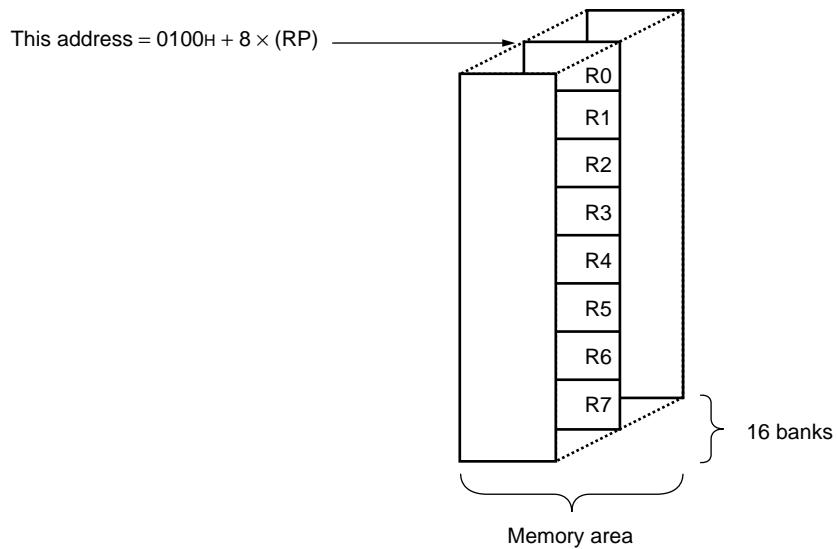

MB89930A Series

The following general-purpose registers are provided :

General-purpose registers : An 8-bit register for storing data

The general-purpose registers are 8 bits and located in the register banks of the memory. One bank contains eight registers and up to a total of 16 banks can be used on the MB89930A series. The bank currently in use is indicated by the register bank pointer (RP) ..

- **Register Bank Configuration**

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

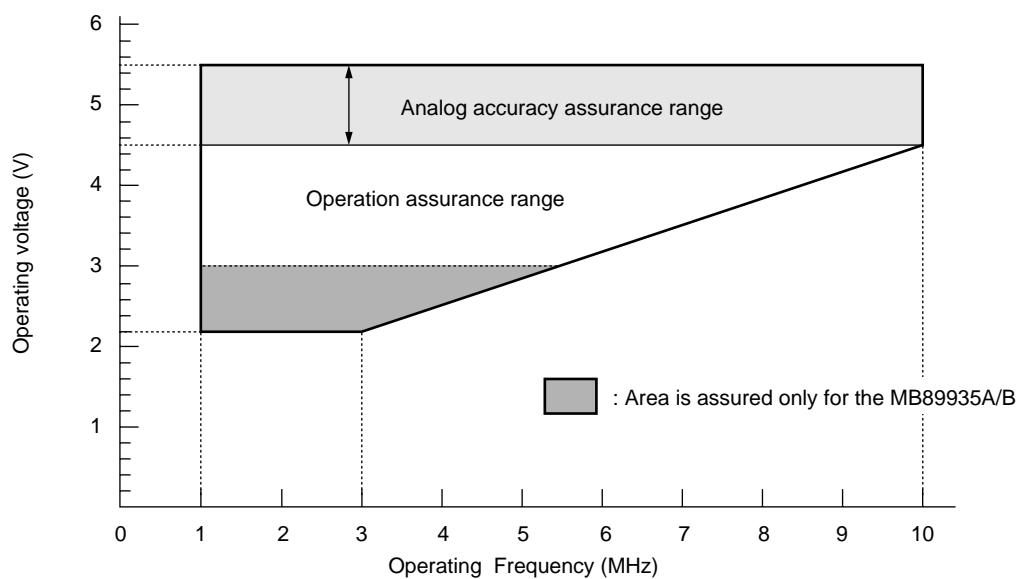

| Parameter | Symbol | Value | | Unit | Remarks |
|--|-------------------|-----------------------|-----------------------|------|--|
| | | Min. | Max. | | |
| Power supply voltage | V _{CC} | V _{SS} – 0.3 | V _{SS} + 6.0 | V | |
| Input voltage | V _I | V _{SS} – 0.3 | V _{CC} + 0.3 | V | |
| Output voltage | V _O | V _{SS} – 0.3 | V _{CC} + 6.0 | V | |
| “L” level maximum output current | I _{OL1} | — | 20 | mA | Pins P40 to P43 |
| | I _{OL2} | — | 10 | mA | Pins excluding P40 to P43 |
| “L” level average output current | I _{OLAV} | — | 4 | mA | Average value (operating current × operating rate) |
| “L” level total maximum output current | ΣI _{OL} | — | 100 | mA | |
| “H” level maximum output current | I _{OH} | — | -10 | mA | |
| “H” level average output current | I _{OHAV} | — | -2 | mA | Average value (operating current × operating rate) |
| “H” level total maximum output current | ΣI _{OH} | — | -50 | mA | |
| Power consumption | P _d | — | 200 | mW | |
| Operating temperature | T _a | -40 | +85 | °C | |
| Storage temperature | T _{stg} | -55 | +150 | °C | |

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

MB89930A Series

2. Recommended Operating Conditions

| Parameter | Symbol | Value | | Unit | Remarks |
|---|-----------|----------------|----------------|------|---|
| | | Min. | Max. | | |
| Power supply voltage | V_{CC} | 2.2 | 5.5 | V | Normal operation assurance range MB89935A/B |
| | | 1.5 | 6.0 | V | Retains the RAMstate in stop mode |
| "H" level input voltage | V_{IH} | 0.7 V_{CC} | $V_{CC} + 0.3$ | V | P00 to P07, P30 to P37, P40 to P43, P50, UI/SI |
| | V_{IHS} | 0.8 V_{CC} | $V_{CC} + 0.3$ | V | MOD0/1, \overline{RST} , EC, $\overline{INT20}$ to $\overline{INT27}$, UCK/SCK, INT10 to INT12 |
| "L" level input voltage | V_{IL} | $V_{SS} - 0.3$ | 0.3 V_{CC} | V | P00 to P07, P30 to P37, P40 to P43, P50, UI/SI |
| | V_{ILS} | $V_{SS} - 0.3$ | 0.2 V_{CC} | V | MOD0/1, \overline{RST} , EC, $\overline{INT20}$ to $\overline{INT27}$, UCK/SCK, INT10 to INT12 |
| Open-drain output pin application voltage | V_D | $V_{SS} - 0.3$ | $V_{CC} + 0.3$ | V | P40 to P43 |
| Operating temperature | T_a | -40 | +85 | °C | |

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

(2) A/D Converter Glossary

- Resolution

Analog changes that are identifiable with the A/D converter

When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.

- Linearity error (unit : LSB)

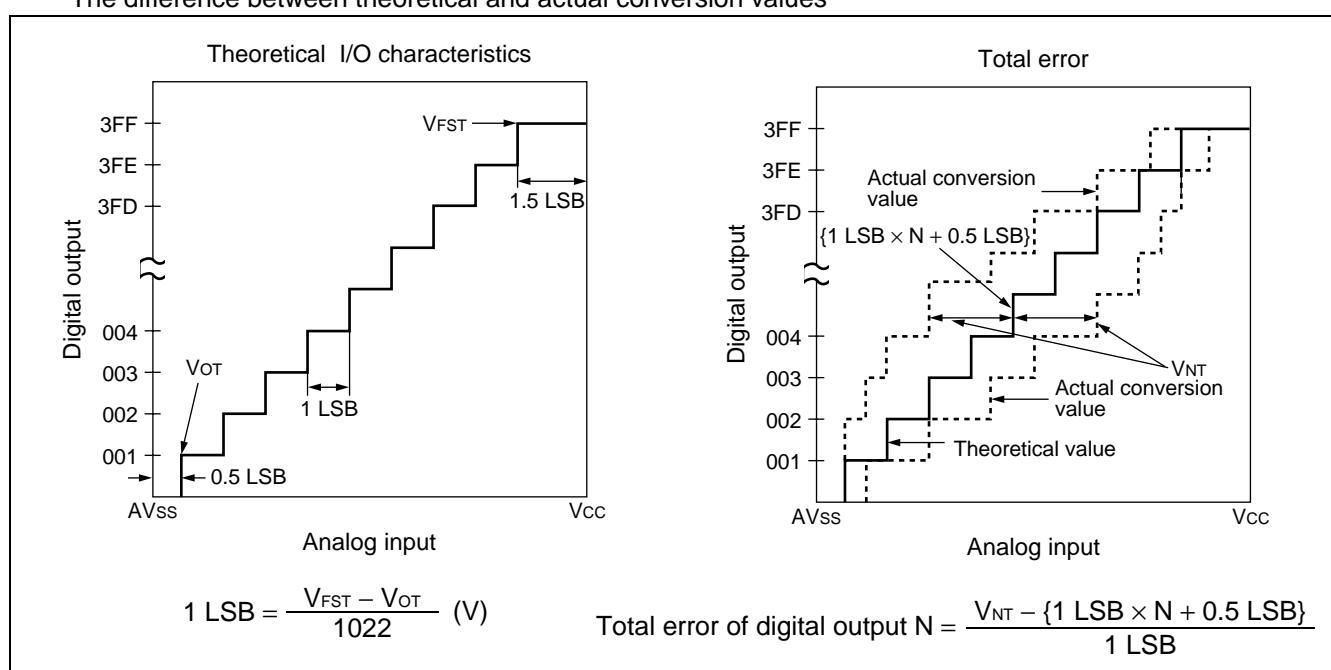

The deviation of the straight line connecting the zero transition point ("00 0000 0000" \leftrightarrow "00 0000 0001") with the full-scale transition point ("11 1111 1111" \leftrightarrow "11 1111 1110") from actual conversion characteristics

- Differential linearity error (unit : LSB)

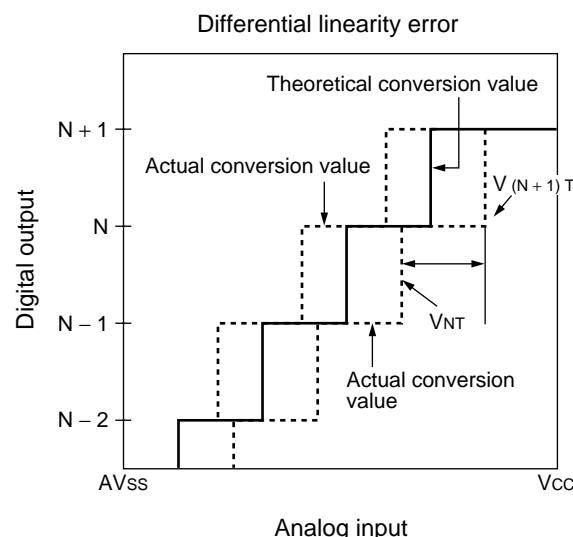

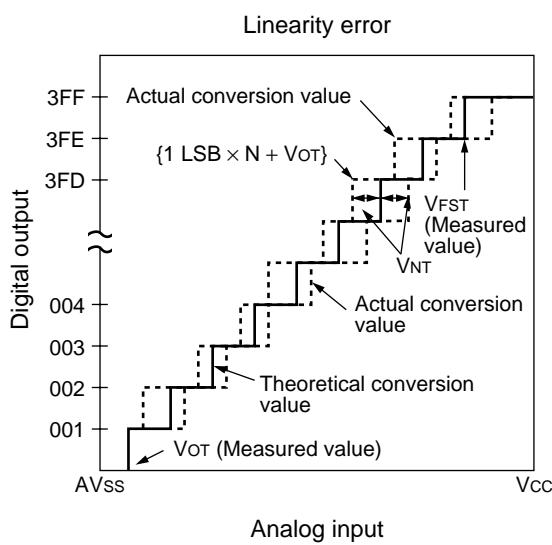

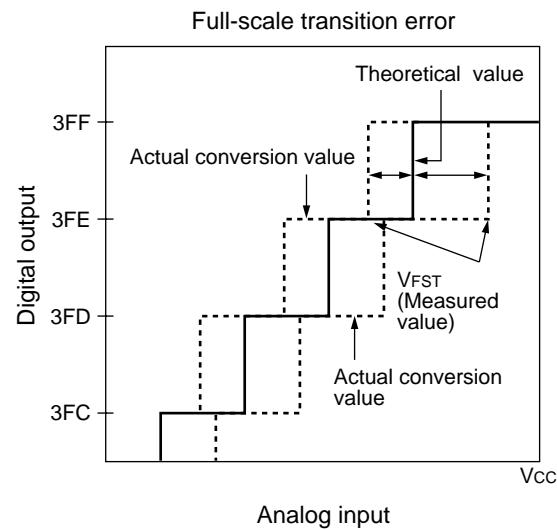

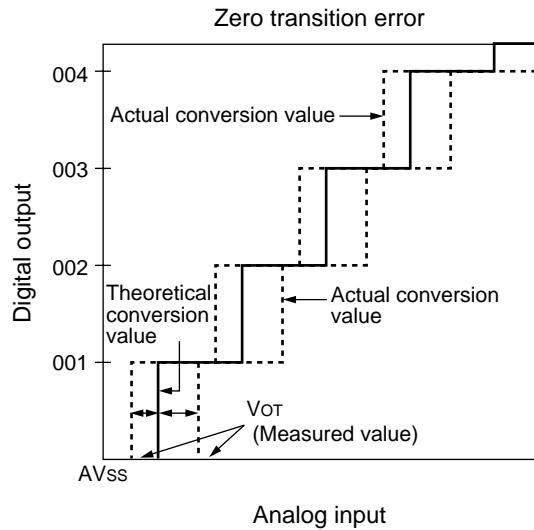

The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value

- Total error (unit : LSB)

The difference between theoretical and actual conversion values

MB89930A Series

$$\text{Linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times N + V_{OT}\}}{1 \text{ LSB}}$$

$$\text{Differential linearity of error digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1$$

MB89930A Series

(3) Notes on Using A/D Converter

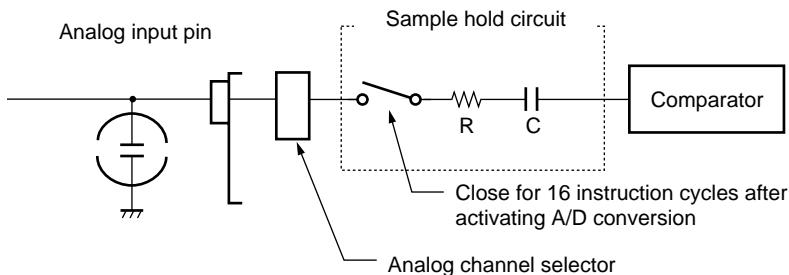

- Input impedance of the analog input pins

The A/D converter used for the MB89930A series contains a sample hold circuit as illustrated below to fetch analog input voltage into the sample hold capacitor for 16 instruction cycles after activating A/D conversion. For this reason, if the output impedance of the external circuit for the analog input is high, analog input voltage might not stabilize within the analog input sampling period. Therefore, it is recommended to keep the output impedance of the external circuit low (below 4 kΩ) .

Note that if the impedance cannot be kept low, it is recommended to connect an external capacitor of about 0.1 μF for the analog input pin.

• Analog Input Equivalent Circuit

If the analog input impedance is higher than 4 kΩ, it is recommended to connect an external capacitor of approx. 0.1 μF.

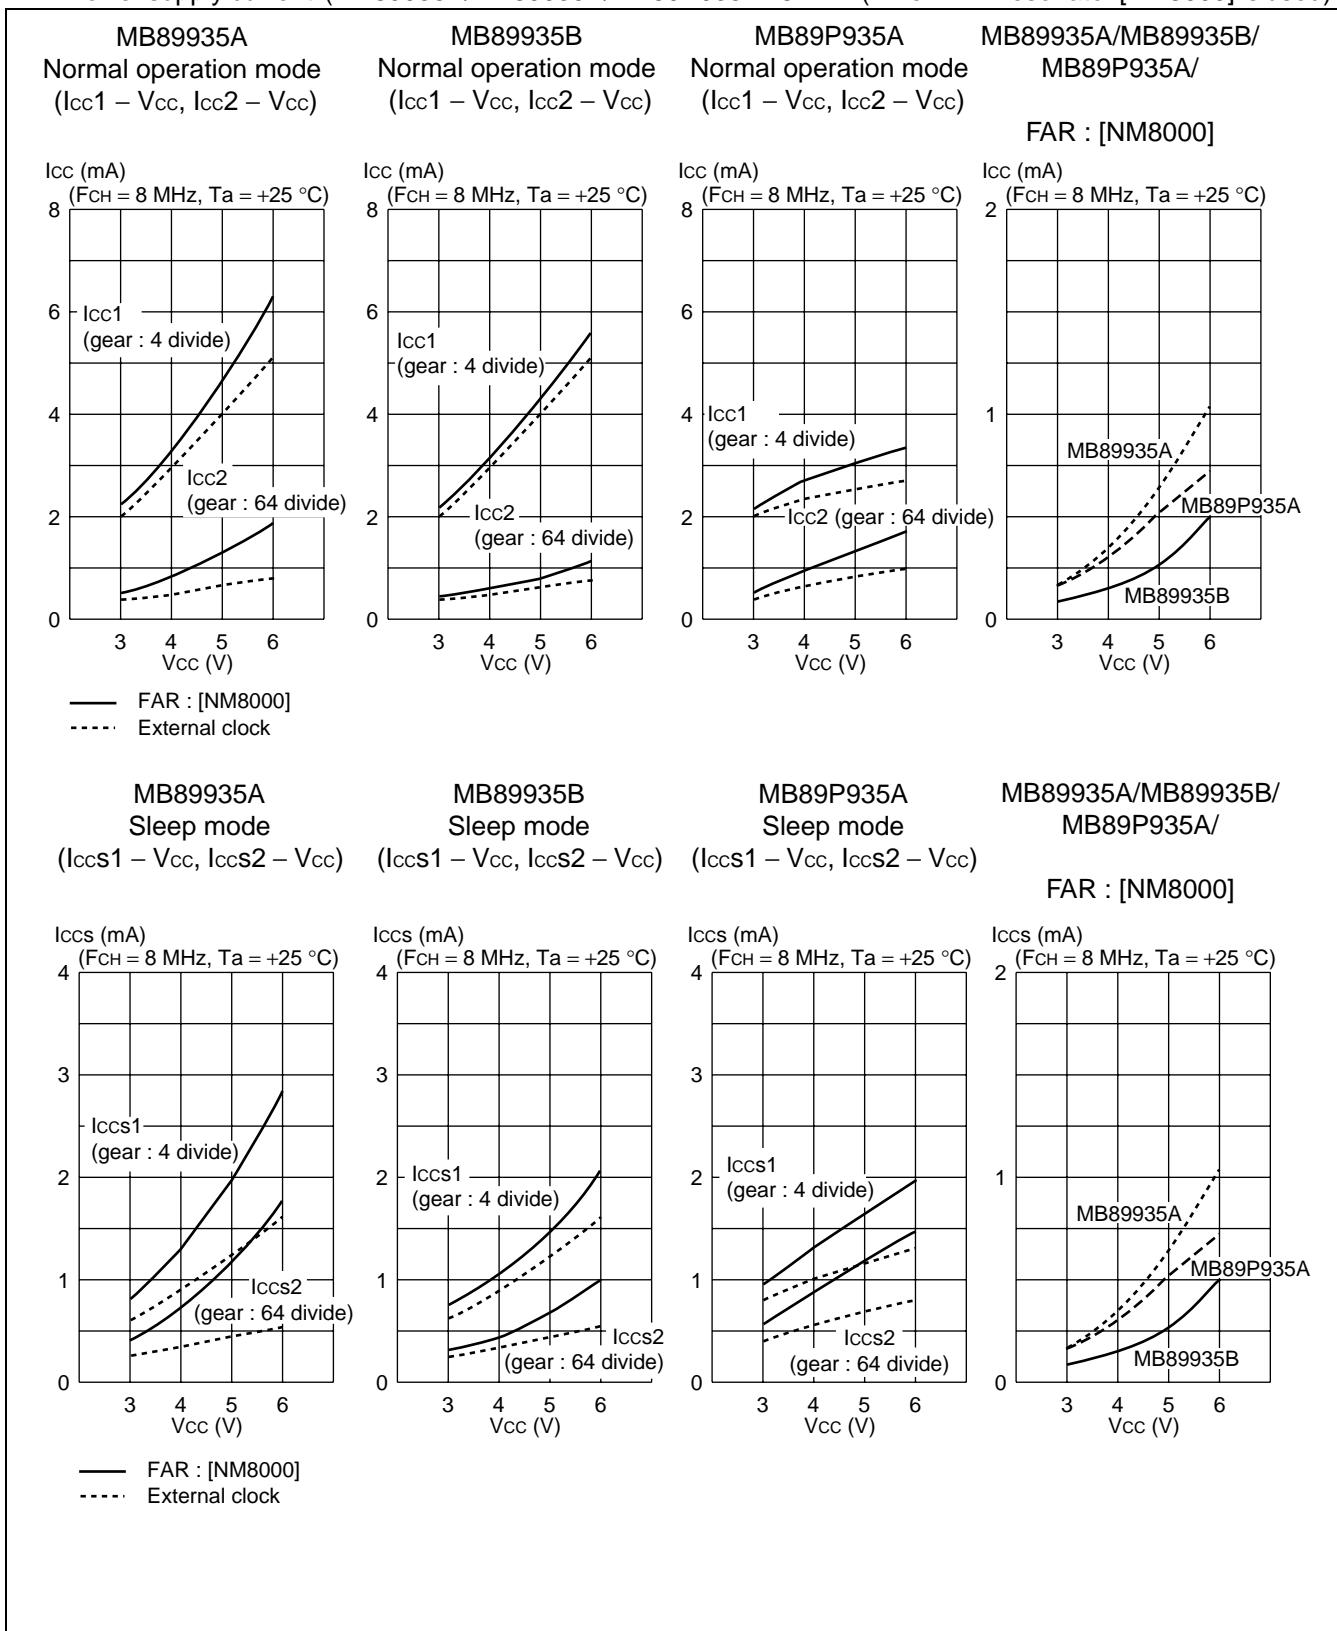

• Error

The smaller the $|V_{cc} - AV_{ss}|$, the greater the error would become relatively.

MB89930A Series

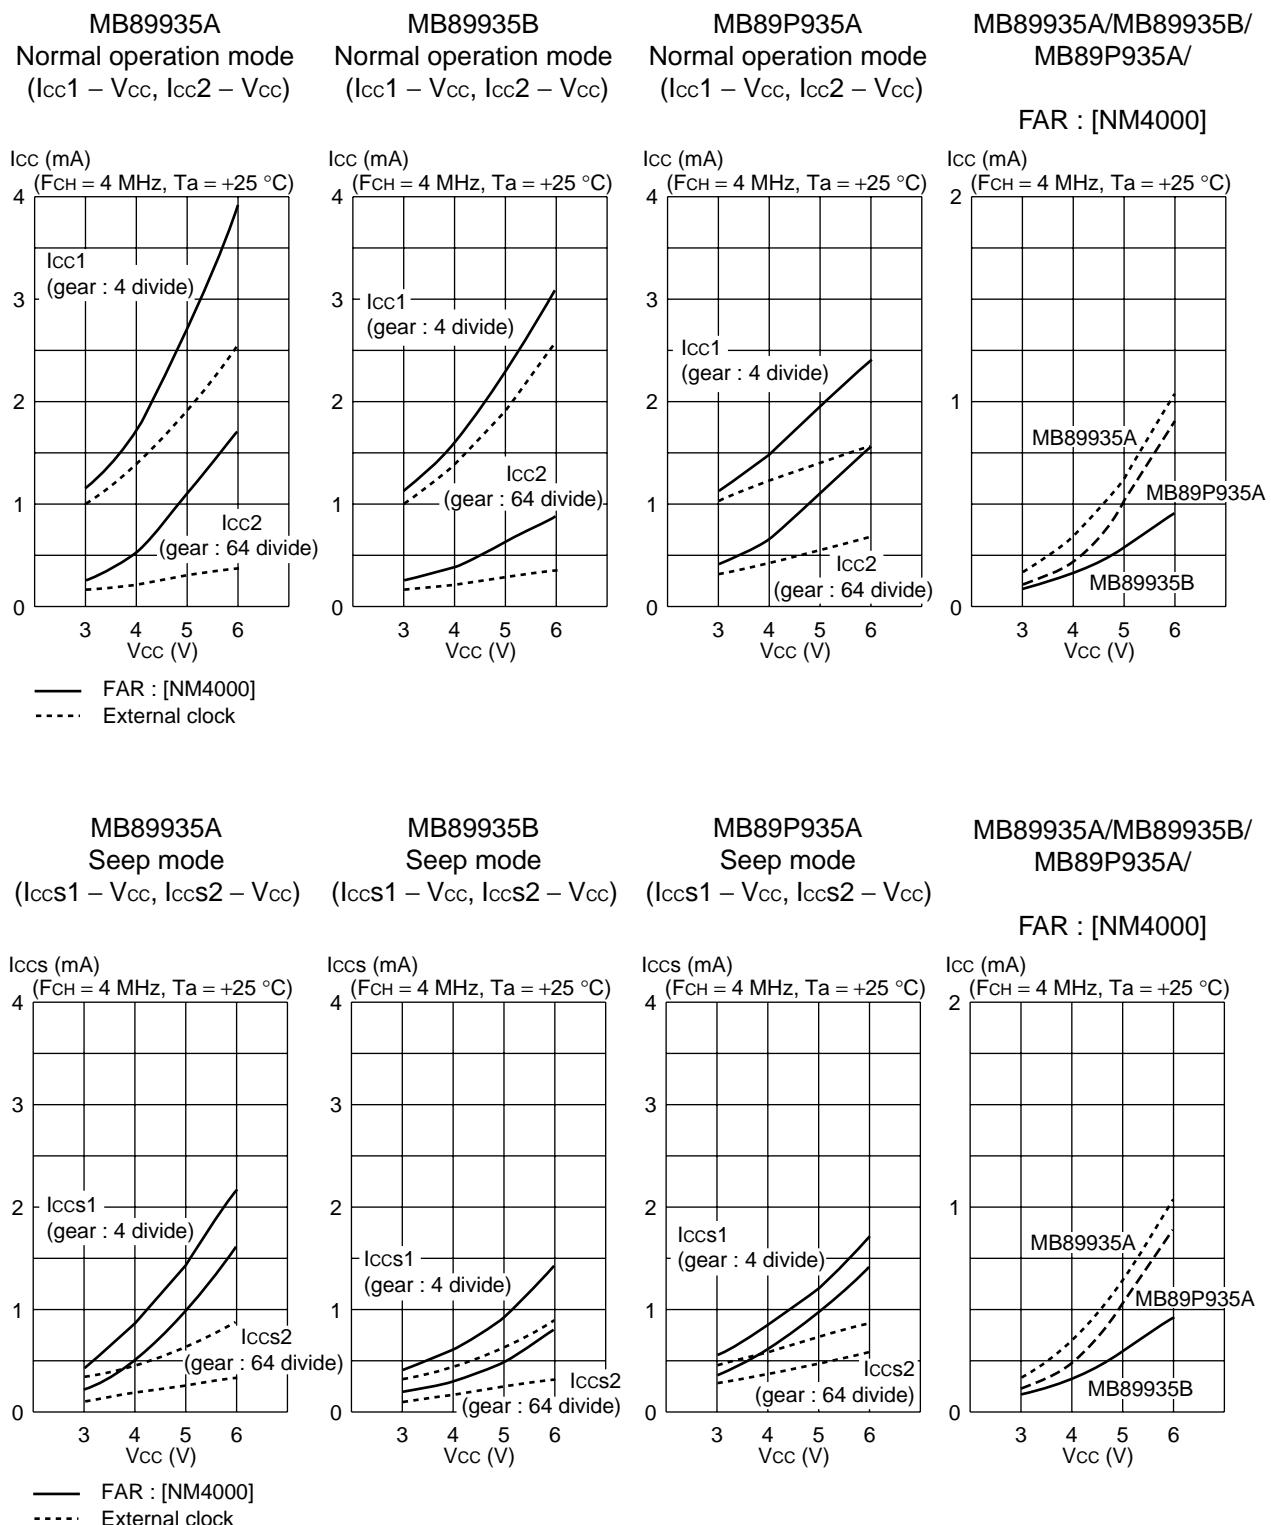

■ EXAMPLE CHARACTERISTICS

■ INSTRUCTIONS (136 INSTRUCTIONS)

Execution instructions can be divided into the following four groups:

- Transfer
- Arithmetic operation
- Branch
- Others

Table 1 lists symbols used for notation of instructions.

Table 1 Instruction Symbols

| Symbol | Meaning |
|--------|---|
| dir | Direct address (8 bits) |
| off | Offset (8 bits) |
| ext | Extended address (16 bits) |
| #vct | Vector table number (3 bits) |
| #d8 | Immediate data (8 bits) |
| #d16 | Immediate data (16 bits) |
| dir: b | Bit direct address (8:3 bits) |
| rel | Branch relative address (8 bits) |
| @ | Register indirect (Example: @A, @IX, @EP) |
| A | Accumulator A (Whether its length is 8 or 16 bits is determined by the instruction in use.) |
| AH | Upper 8 bits of accumulator A (8 bits) |
| AL | Lower 8 bits of accumulator A (8 bits) |
| T | Temporary accumulator T (Whether its length is 8 or 16 bits is determined by the instruction in use.) |
| TH | Upper 8 bits of temporary accumulator T (8 bits) |
| TL | Lower 8 bits of temporary accumulator T (8 bits) |
| IX | Index register IX (16 bits) |
| EP | Extra pointer EP (16 bits) |
| PC | Program counter PC (16 bits) |
| SP | Stack pointer SP (16 bits) |
| PS | Program status PS (16 bits) |
| dr | Accumulator A or index register IX (16 bits) |
| CCR | Condition code register CCR (8 bits) |
| RP | Register bank pointer RP (5 bits) |
| Ri | General-purpose register Ri (8 bits, i = 0 to 7) |
| × | Indicates that the very × is the immediate data. (Whether its length is 8 or 16 bits is determined by the instruction in use.) |
| (×) | Indicates that the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.) |
| ((×)) | The address indicated by the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.) |

Columns indicate the following:

Mnemonic: Assembler notation of an instruction

~: The number of instructions

#: The number of bytes

Operation: Operation of an instruction

TL, TH, AH: A content change when each of the TL, TH, and AH instructions is executed. Symbols in the column indicate the following:

- “-” indicates no change.
- dH is the 8 upper bits of operation description data.
- AL and AH must become the contents of AL and AH prior to the instruction executed.
- 00 becomes 00.

N, Z, V, C: An instruction of which the corresponding flag will change. If + is written in this column, the relevant instruction will change its corresponding flag.

OP code: Code of an instruction. If an instruction is more than one code, it is written according to the following rule:

Example: 48 to 4F ← This indicates 48, 49, ... 4F.

MB89930A Series

Table 2 Transfer Instructions (48 instructions)

| Mnemonic | ~ | # | Operation | TL | TH | AH | NZVC | OP code |
|------------------|---|---|---|----|----|----|--------|----------|
| MOV dir,A | 3 | 2 | (dir) \leftarrow (A) | — | — | — | ----- | 45 |
| MOV @IX +off,A | 4 | 2 | ((IX) +off) \leftarrow (A) | — | — | — | ----- | 46 |
| MOV ext,A | 4 | 3 | (ext) \leftarrow (A) | — | — | — | ----- | 61 |
| MOV @EP,A | 3 | 1 | ((EP)) \leftarrow (A) | — | — | — | ----- | 47 |
| MOV Ri,A | 3 | 1 | (Ri) \leftarrow (A) | — | — | — | ----- | 48 to 4F |
| MOV A,#d8 | 2 | 2 | (A) \leftarrow d8 | AL | — | — | + + -- | 04 |

All Rights Reserved.

The contents of this document are subject to change without notice.
Customers are advised to consult with FUJITSU sales
representatives before ordering.

The information and circuit diagrams in this document are
presented as examples of semiconductor device applications, and
are not intended to be incorporated in devices for actual use. Also,
FUJITSU is unable to assume responsibility for infringement of
any patent rights or other rights of third parties arising from the use
of this information or circuit diagrams.

The contents of this document may not be reproduced or copied
without the permission of FUJITSU LIMITED.

FUJITSU semiconductor devices are intended for use in standard
applications (computers, office automation and other office
equipments, industrial, communications, and measurement
equipments, personal or household devices, etc.).

CAUTION:

Customers considering the use of our products in special
applications where failure or abnormal operation may directly
affect human lives or cause physical injury or property damage, or
where extremely high levels of reliability are demanded (such as
aerospace systems, atomic energy controls, sea floor repeaters,
vehicle operating controls, medical devices for life support, etc.)
are requested to consult with FUJITSU sales representatives before
such use. The company will not be responsible for damages arising
from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure.
You must protect against injury, damage or loss from such failures
by incorporating safety design measures into your facility and
equipment such as redundancy, fire protection, and prevention of
over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or
technologies subject to certain restrictions on export under the
Foreign Exchange and Foreign Trade Control Law of Japan, the
prior authorization by Japanese government should be required for
export of those products from Japan.
