Notes:

1. All specifications are based on TriQuint test circuit shown below
2. In production, devices will be tested at room temperature to a guardbanded specification to ensure electrical compliance over temperature
3. Electrical margin has been built into the design to account for the variations due to temperature drift and manufacturing tolerances
4. Typical values are based on average measurements at room temperature
5. Describes the total variation over the defined frequency range
6. Power handling is targeted for an applied CW modulated RF signal at 55 °C for 10,000 hours. The filter is also able to sustain an instantaneous 20dBm signal without decay
7. This is the optimum impedance in order to achieve the performance shown
