Product Description

The AP562 is a high dynamic range broadband power amplifier in a surface mount package. The single-stage amplifier has 11.5 dB gain, while being able to achieve high performance for 3.3–3.8 GHz WiMAX applications with up to 39.4 dBm of compressed 1dB power.

The AP562 uses a high reliability +12V InGaP/GaAs HBT process technology. The device incorporates proprietary bias circuitry to compensate for variations in linearity and current draw over temperature. The device does not require any negative bias voltage; an internal active bias allows the AP562 to operate directly off a commonly used +12V supply and has the added feature of a +5V power down control pin. RoHS-compliant 5x6mm DFN package is surface mountable to allow for low manufacturing costs to the end user.

The AP562 is targeted for use in a balanced or single ended configuration for WiMAX applications where high linearity and high power is required.

AP562

3.3-3.8 GHz WiMAX 8W Power Amplifier

3.4 – 3.6 GHz Application Note: Changing Icq Biasing Configurations

The AP562 can be configured to operate with lower bias current by varying the bias-adjust resistor R2. (Table 1) The recommended circuit configurations shown previously in this datasheet have the device operating with a 400 mA as the quiescent current (I_{CQ}). This biasing level represents a tradeoff in terms of EVM and efficiency. Lowering I_{CQ} will improve upon the efficiency of the device, but degrade the EVM performance. Measured data shown in the plots below represents the AP562 measured and configured for 3.5 GHz applications. It is expected that variation of the bias current for other frequency applications will produce similar performance results.

- NOTES:**
- GROUND/THERMAL VIAS ARE CRITICAL FOR THE PROPER PERFORMANCE OF THIS DEVICE. VIAS SHOULD USE A .35mm (#80/.0135") DIAMETER DRILL AND HAVE A FINAL PLATED THRU DIAMETER OF .25mm (.010").
 - ADD AS MUCH COPPER AS POSSIBLE TO INNER AND OUTER LAYERS NEAR THE PART TO ENSURE OPTIMAL THERMAL PERFORMANCE.
 - TO ENSURE RELIABLE OPERATION, DEVICE GROUND PADDLE-TO-GROUND PAD SOLDER JOINT IS CRITICAL.
 - ADD MOUNTING SCREWS NEAR THE PART TO FASTEN THE BOARD TO A HEATSINK. ENSURE THAT THE GROUND/THERMAL VIA REGION CONTACTS THE HEATSINK.
 - DO NOT PUT SOLDER MASK ON THE BACK SIDE OF THE PCB BOARD IN THE REGION WHERE THE BOARD CONTACTS THE HEATSINK.
 - RF TRACE WIDTH DEPENDS UPON THE PCB BOARD MATERIAL AND CONSTRUCTION.
 - USE 1 OZ. COPPER MINIMUM.
 - ALL DIMENSIONS ARE IN MILLIMETERS. ANGLES ARE IN DEGREES.
 - A HEATSINK UNDERNEATH THE AREA OF THE PCB FOR THE MOUNTED DEVICE IS STRICTLY REQUIRED FOR PROPER THERMAL OPERATION. DAMAGE TO THE DEVICE CAN OCCUR WITHOUT THE USE OF ONE.
