

LT1464/LT1465

Dual/Quad Micropower, 1MHz C-Load Picoampere Bias Current JFET Input Op Amps

FEATURES

- **Input Bias Current:**
2pA Max (LT1464A)
20pA Max (LT1464, LT1465)
- **Supply Current per Amplifier:** 200 μ A Max
- Gain Bandwidth Product: 1MHz Typ
- Slew Rate: 0.9V/ μ s Typ
- Input Common Mode Range Includes Positive Rail
- Unity-Gain Stable for C-Load™ Up to 10nF
- Open-Loop Gain: 1 Million Typ
- Guaranteed Specs with $\pm 5V$, $\pm 15V$ Supplies
- Guaranteed Matching Specifications
- Standard Pinout: SO-8, SO-14 Package

APPLICATIONS

- Battery-Powered Systems
- Photocurrent Amplifiers
- Low Frequency, Micropower Active Filters
- Low Droop Track-and-Hold Circuits

DESCRIPTION

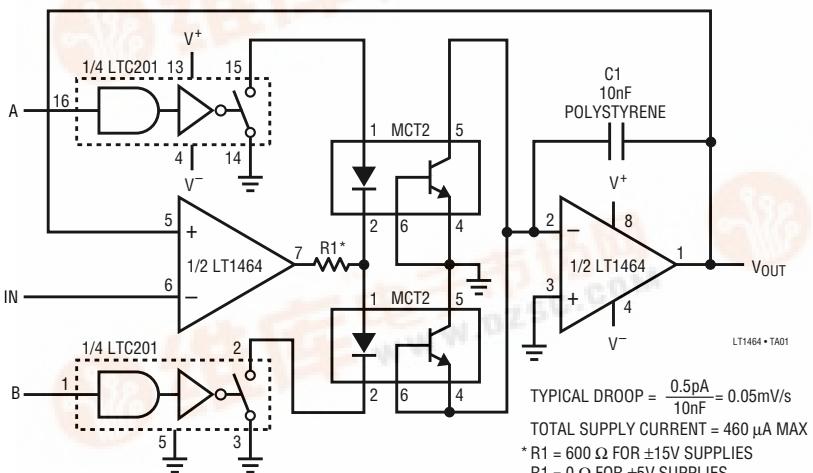

The LT®1464 (dual) and LT1465 (quad) are the first micropower op amps (200 μ A max per amp) to offer picoampere input bias currents (500fA typ) and unity-gain stability for capacitive loads up to 10nF. The output can swing a 10k load to within 1.5V of either supply, just like op amps that require an order of magnitude more supply current. This unique combination of performance makes the LT1464/LT1465 ideal over a wide range of input and output impedances.

In the design and testing of the LT1464/LT1465, particular emphasis has been placed on optimizing performance in the low cost SO-8 (dual) and 14-lead SO (quad) package for $\pm 15V$ and $\pm 5V$ supplies. The input common mode range includes the positive rail. Slew rate (0.5V/ μ s min) and gain bandwidth product (650kHz min) are 100% tested. A full set of matching specifications is also provided.

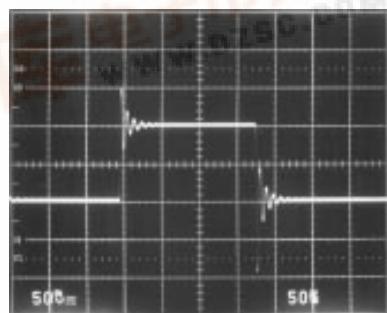

LTC, LTC and LT are registered trademarks of Linear Technology Corporation.
C-Load is a trademark of Linear Technology Corporation.

TYPICAL APPLICATION

Micropower Low Droop Track-and-Hold/Peak Detector

Small-Signal Response, $C_{LOAD} = 10\text{nF}$

FUNCTION	MODE	IN A	IN B	MODE	IN A	IN B
Track-and-Hold	Track	0	0	Hold	1	1
Positive Peak Detector	Reset	0	0	Store	0	1
Negative Peak Detector	Reset	0	0	Store	1	0

LTC201 switch is open for logic "1".

LT1464/LT1465

ABSOLUTE MAXIMUM RATINGS

Supply Voltage $\pm 20V$
 Differential Input Voltage $\pm 40V$
 Input Current $20mA$
 Output Short-Circuit Duration Indefinite
 Operating Temperature Range $-40^{\circ}C$ to $85^{\circ}C$

Specified Temperature Range $-40^{\circ}C$ to $85^{\circ}C$
 Maximum Junction Temperature $150^{\circ}C$
 Storage Temperature Range $-65^{\circ}C$ to $150^{\circ}C$
 Lead Temperature (Soldering, 10 sec) $300^{\circ}C$

The ● denotes specifications which apply over the full operating temperature range.

Note 1: Typical parameters are defined as 60% yield of parameter distributions of individual amplifiers, i.e., out of 100 LT1465s (or 100 LT1464s) typically 240 op amps (or 120) will be better than the indicated specification.

Note 2: The LT1464 and LT1465 are designed, characterized and expected to meet these extended temperature limits, but are not tested at $-40^\circ C$ and $85^\circ C$. Guaranteed I grade parts are available, consult factory.

Note 3: Current noise is calculated from the formula: $i_n = (2qi_b)^{1/2}$ where $q = (1.6)(10)^{-19}$ coulomb. The noise of source resistors up to $1G\Omega$ swamps the contribution of current noise.

Note 4: Slew rate is measured in $A_V = -1$; input signal is $\pm 7.5V$, output is measured at $\pm 2.5V$.

Note 5: $\Delta CMRR$ and $\Delta PSRR$ are defined as follows:

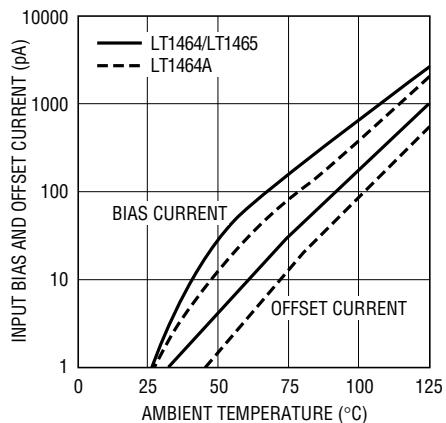

1. CMRR and PSRR are measured in $\mu V/V$ on the individual amplifiers.
2. The difference is calculated between the matching sides in $\mu V/V$.
3. The result is converted to dB.

Note 6: This parameter is not 100% tested.

Note 7: Matching parameters are the difference between amplifiers A and D and between B and C on the LT1465; between the two amplifiers on the LT1464.

APPLICATIONS INFORMATION

Phase Reversal Protection

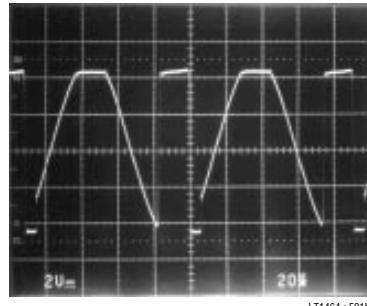

Most industry standard JFET input single, dual and quad op amps exhibit phase reversal at the output when the negative common mode limit at the input is exceeded. Common mode range is at a premium at $\pm 5V$ supplies. The Figures show a $\pm 5.2V$ sine wave input (Figure 1a), the response of a competing JFET input op amp in the unity-

gain follower mode (Figure 1b) and the response of the LT1464/LT1465 (Figure 1c).

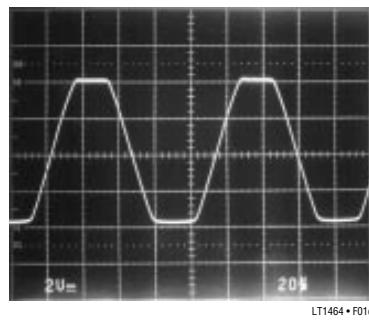

The phase reversal of Figure 1b can cause lock-up in servo systems. The LT1464/LT1465 does not phase-reverse when the common mode input is anywhere within the supplies.
