

2.7-V HIGH-SLEW-RATE RAIL-TO-RAIL OUTPUT DUAL OPERATIONAL AMPLIFIERS

SLOS209 – JANUARY 1998

- **High Slew Rate . . . 10.5 V/ μ s Typ**
- **High-Gain Bandwidth . . . 5.1 MHz Typ**
- **Supply Voltage Range 2.7 V to 5 V**
- **Rail-to-Rail Output**
- **360 μ V Input Offset Voltage**
- **Low Distortion Driving 600- Ω
0.005% THD+N**
- **1 mA Supply Current (Per Channel)**
- **17 nV/ $\sqrt{\text{Hz}}$ Input Noise Voltage**
- **2 pA Input Bias Current**
- **Characterized from $T_A = -40^\circ\text{C}$ to 125°C**
- **Available in MSOP (DGK) Package**

**D OR P PACKAGE

description

The TLV2772 dual CMOS operational amplifier combines high slew rate and bandwidth, rail-to-rail output swing, high output drive and excellent dc precision. The device provides 10.5 V/ μ s of slew rate and 5.1 MHz of bandwidth while only consuming 1 mA of supply current per channel. This ac performance is much higher than current competitive CMOS amplifiers. The rail-to-rail output swing and high output drive makes this device a good choice for driving the analog input or reference of analog-to-digital converters. The device also has low distortion while driving a 600- Ω load for use in telecom systems.

The amplifier has a 360 μV input offset voltage, a 17 $\text{nV}/\sqrt{\text{Hz}}$ input noise voltage, and a 2 pA input bias current for measurement, medical, and industrial applications. The TLV2772 is also specified across an extended temperature range (-40°C to 125°C) making it useful for automotive systems.

The device operates from a 2.2 V to 5.5 V single supply voltage and is characterized at 2.7 V and 5 V. The single supply operation and low power consumption make this device a good solution for portable applications. It is available in an 8-pin PDIP, SOIC and ultra-low profile MSOP package.

AVAILABLE OPTIONS

T _A	V _{IO} max AT 25°C	PACKAGED DEVICES			CHIP FORM‡ (Y)
		SMALL OUTLINE† (D)	MSOP (DGK)	PLASTIC DIP (P)	
0°C to 70°C	2.5	TLV2772CD	TLV2772CDGK	TLV2772CP	TLV2772Y
−40°C to 125°C	2.5	TLV2772ID	TLV2772IDGK	TLV2772IP	
	1.6	TLV2772AID	TLV2772AIDGK	TLV2772AIP	

[†] The D packages are available taped and reeled. Add R suffix to the device type (e.g., TLV2772CDR).

‡ Chip forms are tested at $T_A = 25^\circ\text{C}$ only.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

2.7-V HIGH-SLEW-RATE RAIL-TO-RAIL OUTPUT

DUAL OPERATIONAL AMPLIFIERS

SLOS209 – JANUARY 1998

TLV2772Y chip information

This chip, when properly assembled, displays characteristics similar to the TLV2772. Thermal compression or ultrasonic bonding may be used on the doped-aluminum bonding pads. Chips may be mounted with conductive epoxy or a gold-silicon preform.

CHIP THICKNESS: 15 MILS TYPICAL

BONDING PADS: 4×4 MILS MINIMUM

$T_{jmax} = 150^{\circ}\text{C}$

TOLERANCES ARE $\pm 10\%$.

ALL DIMENSIONS ARE IN MILS.

2.7-V HIGH-SLEW-RATE RAIL-TO-RAIL OUTPUT

DUAL OPERATIONAL AMPLIFIERS

SLOS209 – JANUARY 1998

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage, V_{DD} (see Note 1)	7 V
Differential input voltage, V_{ID} (see Note 2)	$\pm V_{DD}$
Input voltage range, V_I (any input, see Note 1)	$-0.3 \text{ V to } V_{DD}$
Input current, I_I (any input)	$\pm 4 \text{ mA}$
Output current, I_O	$\pm 50 \text{ mA}$
Total current into V_{DD+}	$\pm 50 \text{ mA}$
Total current out of V_{DD-}	$\pm 50 \text{ mA}$
Duration of short-circuit current (at or below) 25°C (see Note 3)	unlimited
Continuous total power dissipation	See Dissipation Rating Table
Operating free-air temperature range, T_A : C suffix	$0^\circ\text{C to } 70^\circ\text{C}$
I suffix	$-40^\circ\text{C to } 125^\circ\text{C}$
Storage temperature range, T_{stg}	$-65^\circ\text{C to } 150^\circ\text{C}$
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES:
1. All voltage values, except differential voltages, are with respect to V_{DD-} .
 2. Differential voltages are at the noninverting input with respect to the inverting input. Excessive current flows when input is brought below $V_{DD-} - 0.3 \text{ V}$.
 3. The output may be shorted to either supply. Temperature and/or supply voltages must be limited to ensure that the maximum dissipation rating is not exceeded.

APPLICATION INFORMATION

macromodel information

Macromodel information provided was derived using Microsim *Parts*™ Release 8, the model generation software used with Microsim *PSpice*™. The Boyle macromodel (see Note 4) and subcircuit in Figure 48 are generated using the TLV2772 typical electrical and operating characteristics at $T_A = 25^\circ\text{C}$. Using this information, output simulations of the following key parameters can be generated to a tolerance of 20% (in most cases):

- Maximum positive output voltage swing
- Maximum negative output voltage swing
- Slew rate
- Quiescent power dissipation
- Input bias current
- Open-loop voltage amplification
- Unity-gain frequency
- Common-mode rejection ratio
- Phase margin
- DC output resistance
- AC output resistance
- Short-circuit output current limit

NOTE 4: G. R. Boyle, B. M. Cohn, D. O. Pederson, and J. E. Solomon, "Macromodeling of Integrated Circuit Operational Amplifiers", *IEEE Journal of Solid-State Circuits*, SC-9, 353 (1974).

IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
