AN5448

TILT correction IC

■ Overview

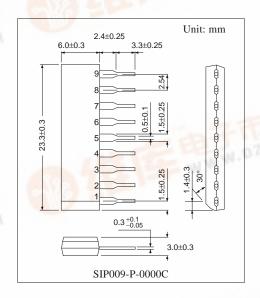

The AN5448 is a rotation (TILT) correction IC in which the control circuit and the drive circuit are integrated on a single chip.

■ Features

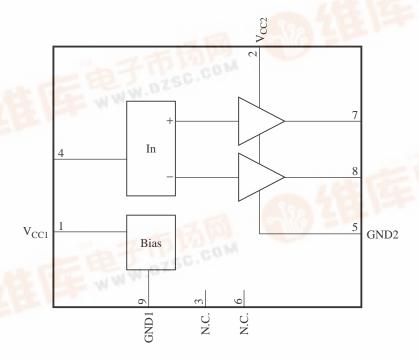

TILT output range: 1.7 V to 7.4 V
Maximum output current: 200 mA
Frequency characteristics: 200 kHz

Applications

• CRT monitor

■ Block Diagram

■ Pin Descriptions

| Pin No. | Description | | |
|---------|--|--|--|
| 1 | Supply voltage 12 V (V _{CC1}) | | |
| 2 | Output block supply voltage 12 V (V _{CC2}) | | |
| 3 | N.C. | | |
| 4 | TILT control input | | |
| 5 | Output block GND (GND2) | | |
| 6 | N.C. | | |
| 7 | TILT positive output | | |
| 8 | TILT negative output | | |
| 9 | GND (GND1) | | |

■ Absolute Maximum Ratings

| Parameter | Symbol | | Parameter Symbol Rating | | Unit |
|----------------------------------|--------------------|------------------|-------------------------|----|------|
| Supply voltage | V_{CC} | V _{CC1} | 13.5 | V | |
| | | V _{CC2} | 13.5 | | |
| Supply current | I_{CC} | I_{CC1} | 30 | mA | |
| | | I_{CC2} | 200 | | |
| Power dissipation *2 | P_{D} | | 524 | mW | |
| Operating ambient temperature *1 | T_{opr} | | -20 to +75 | °C | |
| Storage temperature *1 | $T_{ m stg}$ | | -55 to +150 | °C | |

Note) Be sure to comply with "■ Usage Notes" for the sequence of turning on power supply.

■ Recommended Operating Range

| Parameter | Symbol | Range | Unit |
|----------------------|------------------|---------------|------|
| Supply voltage | V _{CC1} | 10.8 to 13.2 | V |
| | V_{CC2} | 7.4 to 13.2 | |
| TILT control input | V ₄₋₉ | 0 to 6 | V |
| TILT positive output | I_7 | -200 to +200 | mA |
| TILT negative output | I ₈ | -200 to +200 | mA |
| Peak current | I_7 | - 0.3 to +0.3 | A |
| | I_8 | - 0.3 to +0.3 | |

Note) For the conditions in evaluating the peak current, refer to "

Electrical Characteristics • Explanations of testing method".

^{*1}: Except for the power dissipation, operating ambient temperature and storage temperature, all ratings are for $T_a = 25^{\circ}\text{C}$.

^{*2:} The power dissipation shown is for the IC package at $T_a = 75$ °C. Refer to " \blacksquare Technical Information" for details.

ICs for TV AN5448

■ Electrical Characteristics at T_a = 25°C

| Parameter | Symbol | Conditions | Min | Тур | Max | Unit |
|-------------------------------|----------------------|--|--------|------|-------|------|
| Circuit current (pin 1) | I _{CC1} | $V_{CC1} = 12 \text{ V}, V_{CC2} = 12 \text{ V}$ | 0.6 | 1.8 | 4.0 | mA |
| Circuit current (pin 2) | I _{CC2} | $V_{CC1} = 12 \text{ V}, V_{CC2} = 12 \text{ V}$ | _ | 0 | 1 | mA |
| Circuit voltage (pin 7) | V ₇₋₅ | $V_{CC1} = 12 \text{ V}, V_{CC2} = 12 \text{ V}$ | 4.1 | 4.5 | 4.9 | V |
| Circuit voltage (pin 8) | V ₈₋₅ | $V_{CC1} = 12 \text{ V}, V_{CC2} = 12 \text{ V}$ | 4.1 | 4.5 | 4.9 | V |
| Output voltage difference (1) | V _{7-8 (1)} | $V_7 - V_8$ at $V_4 = 2.5 \text{ V}$ | - 0.45 | 0 | +0.45 | V |
| Output voltage difference (2) | V _{7-8 (2)} | $V_7 - V_8$ at $V_4 = 5 \text{ V}$ | 5.3 | 5.7 | 6.1 | V |
| Output voltage difference (3) | V _{7-8 (3)} | $V_7 - V_8$ at $V_4 = 0$ V | -6.1 | -5.7 | -5.3 | V |

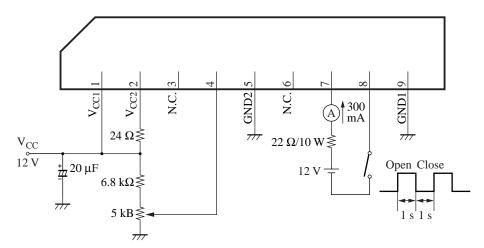

• Design reference data

Note) The characteristics listed below are theoretical values based on the IC design and are not guaranteed.

| Parameter | Symbol | Conditions | Min | Тур | Max | Unit |
|--|----------------------------------|---|-----|------|-----|------|
| TILT output fluctuation with supply voltage (high) | $\frac{\Delta V_{7-8}}{V_{CCH}}$ | $V_{CC1} = 12 \text{ V} \rightarrow 13.2 \text{ V}, \Delta V_{7.8} \text{ at}$ $V_{CC2} = 12 \text{ V} \rightarrow 13.2 \text{ V}$ | _ | ±0.2 | _ | V |
| TILT output fluctuation with supply voltage (low) | $\frac{\Delta V_{7-8}}{V_{CC1}}$ | $V_{CC1} = 12 \text{ V} \rightarrow 10.8 \text{ V}, \Delta V_{7.8} \text{ at}$ $V_{CC2} = 12 \text{ V} \rightarrow 10.8 \text{ V}$ | | ±0.2 | _ | V |
| TILT output fluctuation with temperature | $\Delta V_{7-8}/T_a$ | $V_{\rm IN} = 2.5 \text{ V}, \Delta V_{7-8} \text{ at}$ $T_a = +25^{\circ}\text{C} \rightarrow +75^{\circ}\text{C} \text{ and}$ $T_a = +25^{\circ}\text{C} \rightarrow -20^{\circ}\text{C}$ | _ | ±0.2 | _ | V |

• Explanations of testing method

Conditions on evaluation of the peak current

Confirm that the IC operates normally after turning on and off SW 100 times at the interval of one second. Carry out the above test when pin 7 is replaced with pin 8.

■ Terminal Equivalent Circuits

| Pin No. | Equivalent circuit | Description | DC voltage (V) |
|---------|---|---|----------------|
| 1 | 1 V _{CC1} | Supply voltage 12 V (V _{CC1}): Supply voltage pin. Apply DC 12 V. | 12 |
| 2 | 12 V 10 Ω/2 W 7 8 | Output-block power supply 12 V (V _{CC2}): Supply voltage pin for TILT output Apply DC 12 V via a protection resistor. | 12 |
| 3 | _ | N.C. | _ |
| 4 | V_{CC1} V_{CC1} S | TILT control input: Control input for TILT Apply DC 0 V to 5 V. (typ. = 2.5 V) | |
| 5 | 2 7 8 7 8 | GND2: The grounding pin for TILT output block. | 0 |

ICs for TV AN5448

■ Terminal Equivalent Circuits (continued)

| Pin No. | Equivalent circuit | Description | DC voltage (V) |
|---------|--------------------|--|----------------|
| 6 | _ | N.C. | _ |
| 7 | 7 | TILT positive output: The positive output pin for TILT It outputs the same polarity as pin 4. | 1.7 to 7.4 |
| 8 | 8 | TILT negative output: The negative output pin for TILT It outputs the reverse polarity of pin 4. | 1.7 to 7.4 |
| 9 | 9 GND1 | GND1: The grounding pin for 12 V system. | 0 |

■ Usage Notes

1. The sequence of power supply turning on and off

1) Turning on sequence: First time: Pin 2 (12 V power supply)

Second time: Pin 1 (12 V power supply)

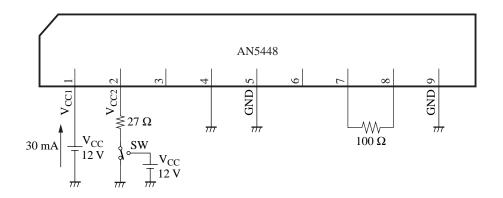

2) Turning off sequence: First time: Pin 1 (12 V power supply)

Second time: Pin 2 (12 V power supply)

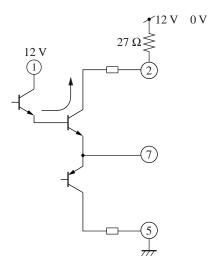

If pin 2 voltage is decreased to 4.5 V or less under the established state of pin 1, an abnormal current of 20 mA to 50 mA flows to pin 1, so that there is a possibility of breakdown of the IC. The above setting sequence should be observed.

The normal operation of the IC has been confirmed after tuning on and off SW 100 times at the interval of 1 second with the following testing circuit. Therefore, there will be no problem even if a current under 50 mA is allowed to flow to pin 1 for only about 1 second at turning on and turning off the set power supply. However, we do not give you guarantee by our shipping test.

- Usage Notes (continued)
- 2. Testing circuit for checking abnormal current

3. Principle of abnormal current generation

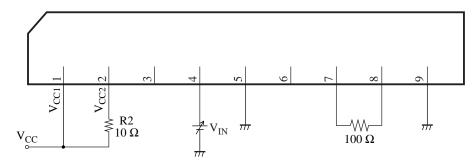

Note) The same also applies to pin 8

ICs for TV AN5448

■ Usage Notes (continued)

4. The change in the output voltage by V_{CC2} voltage change.

If pin 2 voltage becomes a voltage of 8.3~V or less by making R2 value larger, the upper limit of TILT output voltage is restricted and becomes as shown in figure 1.

Care must be taken at using V_{CC2} at a voltage of 8.3 V or less.
