- A: The value of R_{θJA} is measured with the device mounted on 1in² FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C. The value in any a given application depends on the user's specific board design. The current rating is based on the ≤ 10s thermal resistance rating.
- B: Repetitive rating, pulse width limited by junction temperature.
- C. The R_{θJA} is the sum of the thermal impedance from junction to lead R_{θJL} and lead to ambient.
- D. The static characteristics in Figures 1 to 6 are obtained using 80μs pulses, duty cycle 0.5% max.
- E. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C. The SOA curve provides a single pulse rating.
