### DESCRIPTION

The B5S16861 is an advanced high-speed CMOS 20-BIT TWO PORT BUS SWITCH fabricated with sub-micron silicon gate and double-layer metal wiring C<sup>2</sup>MOS technology.

It is ideal for 4V to 5.5V  $V_{CC}$  operations and ultra-low power and low noise applications, typically notebook and docking station.

Any  $nG$  output control governs two 10-bit BUS SWITCHES. Output Enable inputs ( $nG$ ) tied together gives full 20-bit operations. When  $nG$  is LOW, the switches are on. When  $nG$  is HIGH, the switches are in high impedance state.

It has ultra high-speed performance at 5V near zero delay with low ON resistance.

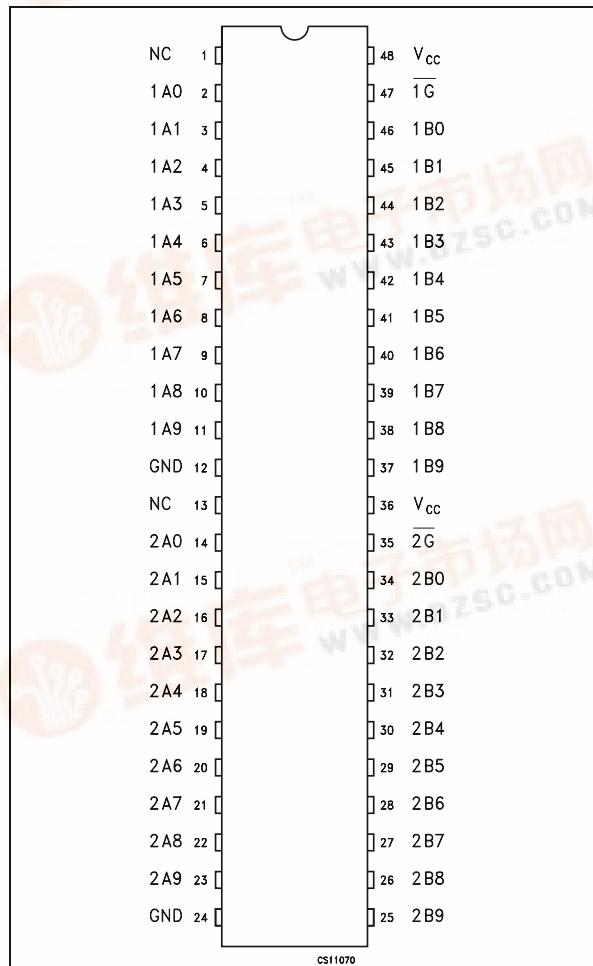

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
