

# Headphone amplifier with internal LPF and EVR for CD-ROM

## BA3530FS

The BA3530FS is an H / P amplifier with internal secondary LPF and EVR circuits. When multibit output from a D / A converter is input, the secondary LPF outputs an audio signal. The amplifier circuit allows for line output and headphone output. The output level for headphones can be changed with the EVR circuit. This IC also has independent internal mute circuits for the left and right channels.

### ●Applications

CD-ROM drives and other products (with line and headphone output pins) that process digital audio signals

### ●Features

- 1) Internal LPF, line amplifier and EVR.
- 2) Internal mute function.
- 3) Internal thermal shutdown circuit.
- 4) No attached components are needed for oscillation prevention, even at a load of 8Ω.
- 5) Mute function reduces the popping noises that can occur when the power is turned on and off.

### ●Absolute maximum ratings (Ta = 25°C)

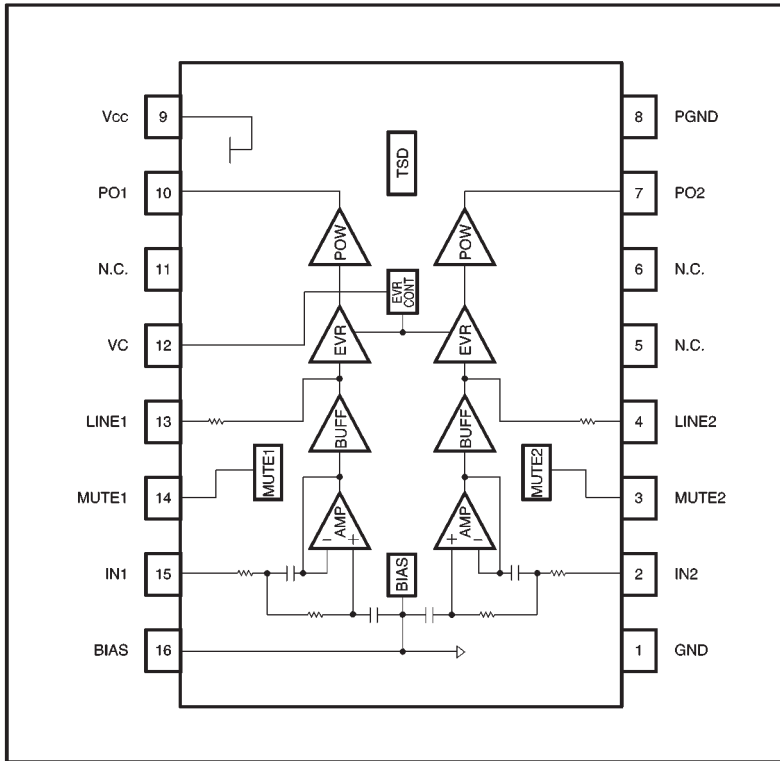

Parameter	Symbol	Limits	Unit
Applied voltage	V <sub>CC</sub>	6.5	V
Power dissipation	P <sub>d</sub>	500 *	mW
Operating temperature	T <sub>opr</sub>	-10~+75	°C
Storage temperature	T <sub>stg</sub>	-55~+125	°C

\* Reduced by 5.0 mW for each increase in Ta of 1°C over 25°C.

### ●Recommended operating conditions

Parameter	Symbol	Min.	Typ.	Max.	Unit
Power supply voltage	V <sub>CC</sub>	4.5	—	5.5	V

● Block diagram

- Electrical characteristics (unless otherwise noted,  $T_a = 25^\circ\text{C}$ ,  $V_{CC} = 5.0\text{V}$ , line  $R_{L1} = 50\text{k}\Omega$ , H / P  $R_{L2} = 32\Omega$ ,  $V_{IN} = 0.8V_{rms}$ ,  $f = 1\text{kHz}$ , EVR Max.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Quiescent current	$I_Q$	6	11	18	mA	$V_{IN}=0V_{rms}$

Ripple rejection	RRH	45	50	—	dB	$f_{RR}=100\text{Hz}$ , $V_{RR}=-20\text{dBV}$
EVR attenuation	ATT	65	75	—	dB	$EVR=\text{Max.}\sim\text{Min.}$

©Not designed for radiation resistance.

● Application example

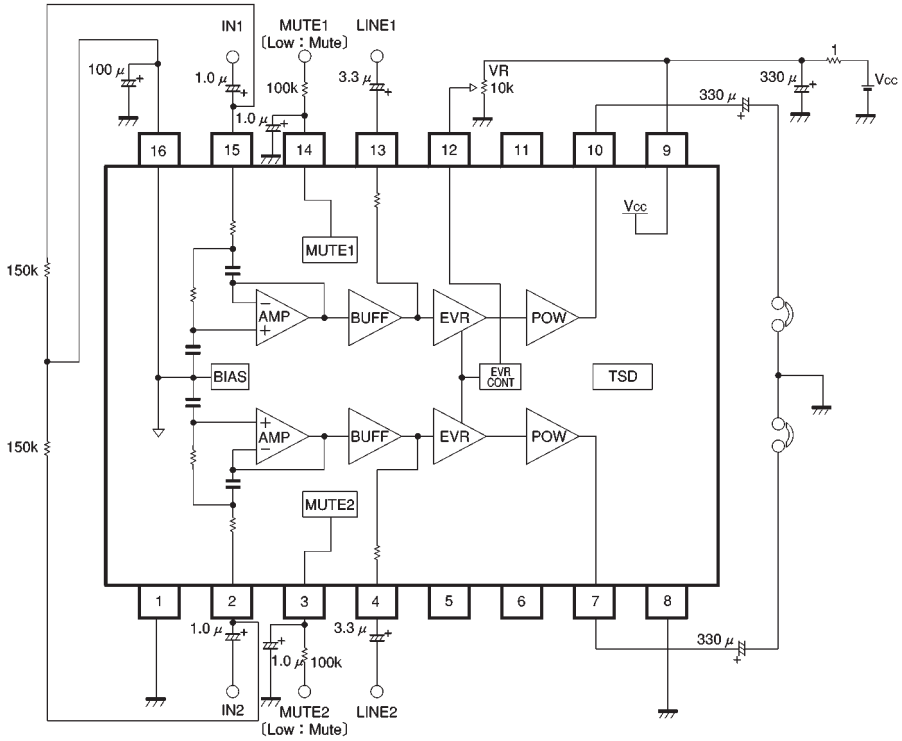

Fig.2

● Operation notes

(1) Preventing popping noises

The BA3530FS has a mute function that reduces the popping noises that can occur when the power is turned on or off. The popping noises that occur when the muting function turns on and off can be reduced by attaching a capacitor and resistor to the mute pins (pins 3 and 14).
