

VIF/SIF signal processor BA7356S

The BA7356S is a multi-format (M, B/G, D/F, and I) VIF/SIF signal processor for television and VCR applications. It features a built-in sound-trap and band-pass filters, and employs a pulse-count audio detector that does not require adjustment. This IC reduces external component requirements, and allows space savings.

● Applications

TVs and VCRs

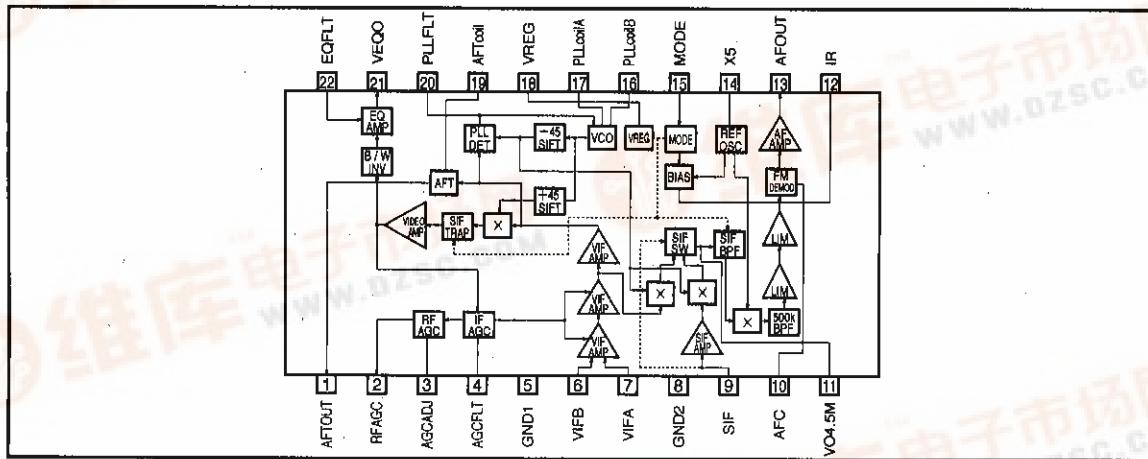

● Features

- 1) Separate-carrier PLL with full synchronous detection.
Excellent DG/DP, CS beat (920kHz) and cross color.
In addition, by pulling down the SIF input (pin 9) it can be used as an intercarrier.
- 2) The IF AGC time constant is dual-layered to allow faster speeds.
- 3) The variable-gain amplifier has excellent linearity to ensure low distortion, and AGC variance and temperature drift have been minimized.
- 4) Built-in SOUND filter (SOUND trap and SOUND BPF).
The MODE switch can be used to switch between M, B/G, I, and D/K (4.5MHz, 5.5MHz, 6.0MHz, and 6.5MHz

respectively). In particular, the SOUND BPF gives a larger attenuation ratio than conventional discrete circuits by using two-layer SIF+500kHz BPFs.

- 5) The audio detector uses a 500kHz BEAT DOWN pulse-counter detector that does not require adjustment. This eliminates the need for a detector coil and gives better linearity and S/N.
- 6) Use of pulse-counter detection and the built-in SOUND filter means fewer pins, external components and adjustment locations are required. The IC is available in a 22-pin SDIP package and will enable cost and space savings.

● Block diagram

● Absolute maximum ratings (Ta=25°C)

Parameter	Symbol	Limits	Unit
Applied voltage	V _{CCMax}	10.5 *1	V
Power dissipation	P _{dMax}	1250 *2	mW
Operating temperature	T _{opr}	-15 ~65	°C
Storage temperature	T _{stg}	-40 ~150	°C
Pin 2 input voltage	V _{P2Max}	10.5	V

*1 27Ω resistor connected between V_{CC} and V_{REG}.

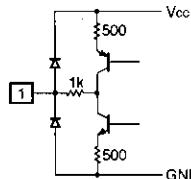

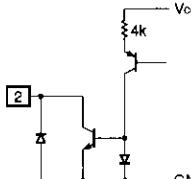

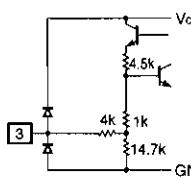

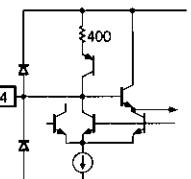

*2 When IC is stand alone, reduced by 12.5mW for each increase in Ta of 1°C over 25°C.

● Recommended operating conditions (Ta=25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage (9V)	V _{CC9V}	8.8~9.2 *1	V
Power supply voltage (12V)	V _{CC12V}	11.7 ~12.3 *2	V

*1 27Ω resistor connected between V_{CC} and V_{REG}.*2 62Ω resistor connected between V_{CC} and V_{REG}.

●Pin description

Pin No.	Pin Name	IN / OUT	Standard voltage	Equivalent circuit	Function
1	AF - TOUT	OUT	—		AFT output. VREG/GND push-pull output.
2	RF - AGC	OUT	—		RF-AGC output. Open-collector output. Gain can be set using an external resistor (minimum value of the maximum sink current of pin 2 is 0.7mA). Keep the pin 2 voltage at 10.5V or less.
3	AGC - ADJ	—	2.1V (when 100kΩ resistor connected)		RF-AGC delay point adjustment. Connect to GND via a variable resistor (approx. 100k Ω).
4	AGC - FLT	—	5.0V		For filter time constant for VIF AGC.
5	GND1		0V		GND for VIF, AGC and AFT.

Pin No.	Pin Name	IN / OUT	Standard voltage	Equivalent circuit	Function
6 7	VIFB VIFA	IN	4.2V		Video IF input. Use with balanced input.
8	GND2	-	0V		SIF and PLL GND.
9	SIF	IN	6.6V		Audio IF input. Can set to intercarrier mode by pulling down via a 2k Ω resistor.
10	AFC	-	2.7V		Holding the audio output DC level fixed. Connect to GND via a 4.7 μF capacitor and to VREG via a 10 μF capacitor to reduce buzz. Set this pin to 0.3V or lower to apply audio/video mute.
11	VO - 4.5M	-	5.2V		2nd SIF output. Connect a trap to this pin to vary the sound filter characteristics. The internal impedance is a high 1k Ω, so connect a buffer to output.
12	IR	-	2.4V		Reference current source for adjusting the internal filter. Use connected to GND via a 24k Ω resistor. Use an accurate resistor with good temperature characteristics (e.g. ±1% metal film).
13	AFOUT	OUT	3.2V		Audio signal output. The standard output in the case of B/G is 520mVrms (when f = 50kHz). Connect to GND via a 10k Ω resistor.

Pin No.	Pin Name	IN / OUT	Standard voltage	Equivalent circuit	Function
14	X5	—	5.0V		For connection to a 5MHz oscillator (when M format is used). Use as a reference oscillator for automatic adjustment of the internal filter, and as the signal for the SIF signal low frequency conversion. (B/G, D/K format: 6MHz, I format: 6.5MHz).
15	MODE	IN	3.4V		Input Trap Filter switch. 0V: M format (4.5MHz) 2.4V: D/K format (6.5MHz) 4.3V: I format (6.0MHz) VREG: B/G format (5.5MHz)
16 17	PLL - COILA PLL - COILB	—	3.6V		For connection of IF detector VCO oscillator coil.
18	VREG	—	6.6V		IF circuit power supply. Pin 18 has a built-in shunt regulator.
19	AFT - COIL	—	3.0V		For connection of AFT coil. To apply AFT defeat, connect to GND via a 1kΩ (approx.) resistor.
20	PLL - FLT	—	3.4V		Time constant circuit for the PLL filter.
21	VEQO	OUT	2.0V (SYNC)		VIDEO output. Output is via the sound trap, B/W noise inverter, and EQ AMP. Connect to GND via a 4.7kΩ resistor.
22	EQFLT	—	5.2V		EQ Filter. Connect to GND via an LCR series resonant circuit. R should be ≥1kΩ.

* Vcc and Vcc2 in the equivalent circuit diagrams are connected to the VREG pin (pin 18).

●Electrical characteristics (Unless otherwise specified $T_a=25^\circ C$, $V_{cc}=9V$, and $P=38.9MHz$)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
(VREG)						
Circuit current	I_{CC}	—	92	105	mA	
Regulated voltage	V_{REG}	6.2	6.6	7.0	V	
(VIF)						
Input sensitivity	V_{VMIN}	38	43	48	$\text{dB } \mu$	$V_{vo} = -3\text{dB}$ point

● Application example

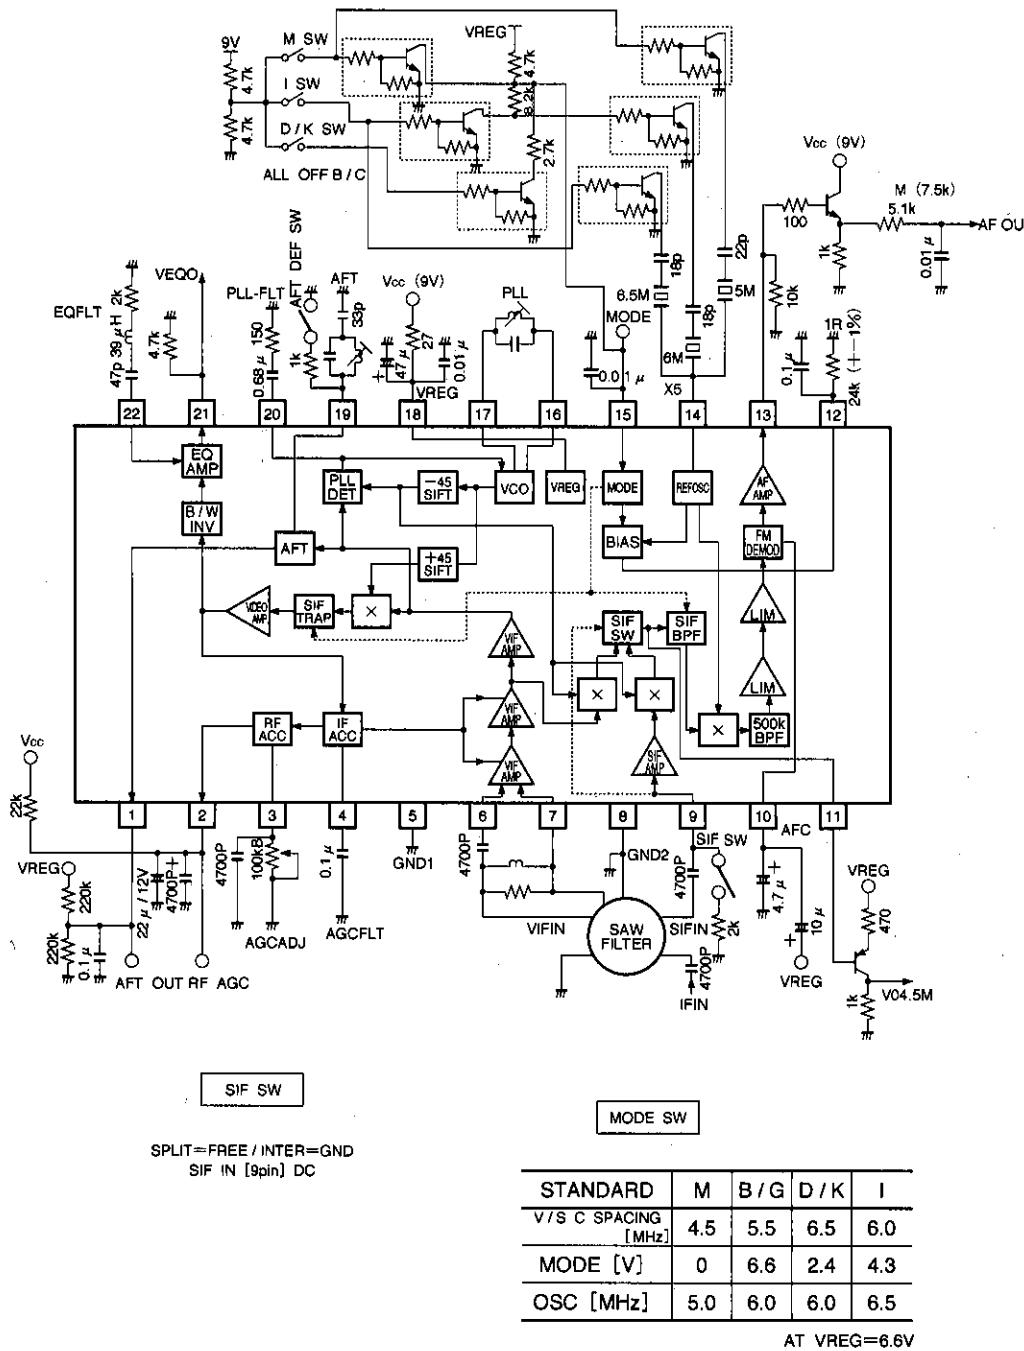

Fig.2

● Operation notes

- Simultaneous audio and video output muting function
It is possible to simultaneously mute the audio and video output by pulling the AFC filter pin down.
- AFT defeat function
AFT defeat can be applied by pulling the AFT coil pin down via a $1\text{k}\Omega$ resistor.
- Recommended SIF input range for intercarrier mode
 $\text{P/S}=20$ to 30dB (including SAW-FILTER).
- IF input range for RF-AGC switching
 60 to $95\text{dB}\mu$.
- Intercarrier mode switching
Intercarrier mode can be set by pulling the SIF pin down via a $2\text{k}\Omega$ resistor.
- IR pin external resistor
This resistor sets the filter system reference current, so use an accurate component that has good temperature characteristics.

• Adjustment of the evaluation board

Before performing measurements, adjust the coils as described below.

1. VCO coil

Lower the VIF input level, and apply a voltage of $\text{AGCFLT}=6\text{V}$. Monitor the PLL-FIL voltage (V_1). Next, input a signal of $\text{VIFIN}=80\text{dB}\mu$, 38.9MHz , and with the AGCFLT free, adjust the VCO so that the voltage at this time, V_2 , becomes the same as V_1 .

2. AFT coil

Input a signal of $\text{VIFIN}=80\text{dB}\mu$, 38.9MHz , set the AFT defeat switch to open, and monitor the AFT output pin voltage. Rotate the AFT coil, adjust the output voltage to $1/2\text{VREG}$ (Typ. 3.3V) at the point where the output voltage changes steeply.

● External dimensions (Units: mm)
