● Operation notes

(1) We guarantee the application circuit design, but recommend that you thoroughly check its characteristics in actual use. If you change any of the external component values, check both the static and transient characteristics of the circuit, and allow sufficient margin in your selections to take into account variations in the components and ICs.

Note that Rohm has not fully investigated patent rights regarding this product.

(2) Based on the EIAJ static electric destruction voltage measurement ($C = 200\text{pF}$ and $R = 0\Omega$), the withstand voltage of pins 4, 5 and 12 has been determined to be 200V or less. Take due care.
