

Dual 4-channel analog multiplexer / demultiplexer

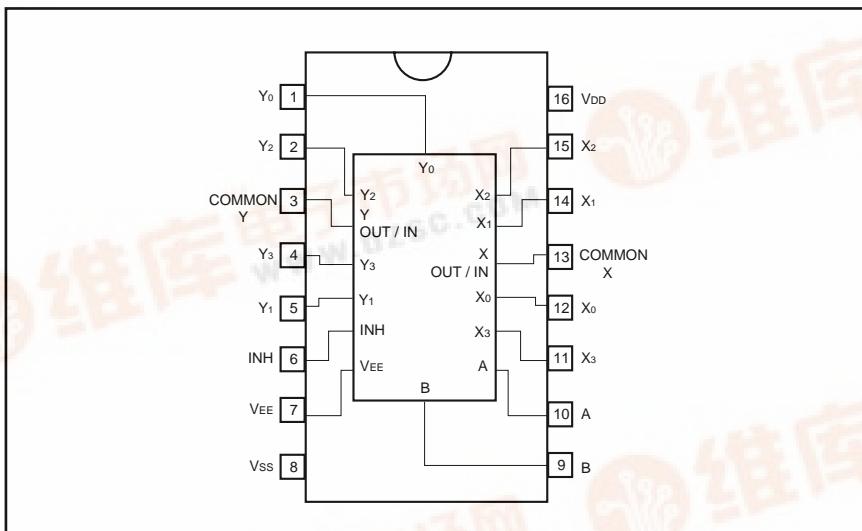

BU4052BC / BU4052BCF / BU4052BCFV

The BU4052BC, BU4052BCF, and BU4052BCFV are multiplexers / demultiplexers capable of selecting and combining analog signals and digital signals with a configuration of $4 \text{ ch} \times 2$.

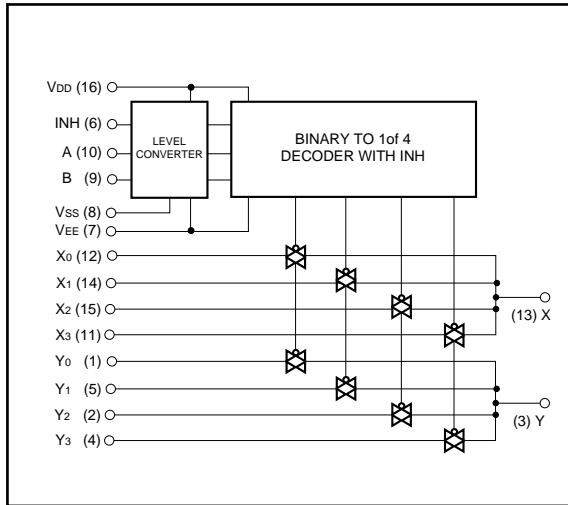

Inhibit signals and control signals are used to turn on the switch of the corresponding channel. In addition, even if the logical amplitude ($V_{DD}-V_{SS}$) of the control signal is low, signals with a large amplitude ($V_{DD}-V_{EE}$) can be switched.

In addition, as each switch has a low ON resistance, it can be connected to a low impedance circuit.
