NC7SV57 • NC7SV58
TinyLogic® ULP-A Universal Configurable 2-Input Logic Gates

General Description

The NC7SV57 and NC7SV58 are universal configurable 2-input logic gates from Fairchild's Ultra Low Power (ULP-A) Series of TinyLogic®. ULP-A is ideal for applications that require extreme high speed, high drive and low power. This product is designed for a wide low voltage operating range (0.9V to 3.6V V_{CC}) and applications that require more drive and speed than the TinyLogic ULP series, but still offer best in class low power operation. Each device is capable of being configured for 1 of 5 unique 2-input logic functions. Any possible 2-input combinatorial logic function can be implemented as shown in the Function Selection Table. Device functionality is selected by how the device is wired at the board level. Figure 1 through Figure 10 illustrate how to connect the NC7SV57 and NC7SV58 respectively for the desired logic function. All inputs have been implemented with hysteresis.

The NC7SV57 and NC7SV58 are uniquely designed for optimized power and speed, and are fabricated with an advanced CMOS technology to achieve high-speed operation while maintaining low CMOS power dissipation.

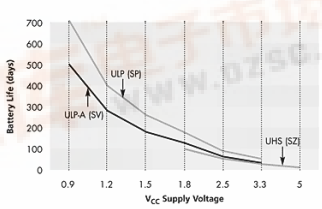
Battery Life vs. V_{CC} Supply Voltage



TinyLogic ULP and ULP-A with up to 50% less power consumption can extend your battery life significantly.
Battery Life = ($V_{battery}$ *$I_{battery}$*.9)/(P_{device})/24hrs/day
Where, P_{device} = (I_{CC} * V_{CC}) + (C_{PD} + C_L) * V_{CC}^2 * f
Assumes ideal 3.6V Lithium Ion battery with current rating of 900mAH and derated 90% and device frequency at 10MHz, with C_L = 15 pF load
