CY2300

Features

- 4-multiplier configuration
- Single phase-locked loop architecture
- Phase Alignment
- · Low jitter, high accuracy outputs
- Output enable pin
- 3.3V operation
- 5V Tolerant input
- Internal loop filter
- 8-pin 150-mil SOIC package
- Commercial and Industrial Temperature available

YPRESS

Phase-Aligned Clock Multiplier

Benefits

- 1/2x, 1x, 1x, 2x Ref
- 10 MHz to 166.67 MHz operating range (reference input from 20 MHz to 83.33 MHz)
- All outputs will have a consistent phase relationship with each other and the reference input
- Meets critical timing requirements
- Enables design flexibility and lower power consumption
- · Supports industry standard design platforms
- · Allows flexibility on Reference input
- Alleviates the need for external components
- Industry standard packaging saves on board space
- Suitable for wide spectrum of applications

Pin Definitions

Pin	Signal ^[1]	Description	
1	1/2xREF	Clock output, 1/2x Reference	
2	GND	Ground	
3	REFIN	Input Reference frequency, 5V tolerant input	
4	REF	Clock output Reference	
5	REF	Clock output Reference	
6	2xREF	Clock output, 2x Reference	
7	VDD	3.3V Supply	
8	OE	Output Enable (weak pull-up)	

Functional Description

The CY2300 is a 4-output 3.3V phase-aligned system clock designed to distribute high-speed clocks in PC, workstation, datacom, telecom, and other high-performance applications.

The part allows the user to obtain 1/2x, 1x, 1x and 2x REFIN output frequencies on respective output pins.

The part has an on-chip PLL which locks to an input clock presented on the REFIN pin. The input-to-output skew is guaranteed to be less than ± 200 ps, and output-to-output skew is guaranteed to be less than 200 ps.

Multiple CY2300 devices can accept the same input clock and distribute it in a system. In this case, the skew between the outputs of two devices is guaranteed to be less than 400 ps.

The CY2300 is available in commercial and industrial temperature ranges.

Maximum Ratings

Supply Voltage to Ground Potential .	–0.5V to +7.0V
DC Input Voltage (Except Ref)	–0.5V to V_{DD} + 0.5V
DC Input Voltage REF	–0.5 to 7V
Storage Temperature	–65°C to +150°C
Junction Temperature	150°C
Static Discharge Voltage (per MIL-STD-883, Method 3015)	>2000V
