

## PRODUCT DATA SHEET

**DAC-341****10-Bit 80 MHz  
Video Speed D/A Converter**

## FEATURES

- 10-bit Resolution
- Single +5V Operation
- TTL CMOS
- $\pm 1/2$  LSB Differential Non-linearity
- Built-in Independent Constant-Voltage Source
- 80MHz Conversion Rate
- Low 150mW Power Dissipation
- Low Glitch Energy, 50pV/s

## GENERAL DESCRIPTION

The DAC-341 is a single channel 10-bit, 80MHz Digital to Analog Converter designed for video applications. The DAC-341's main features include  $\pm 0.5$  LSB differential nonlinearity, single +5V power supply operation, a built-in constant voltage reference and very low glitch energy.

The DAC-341 develops a full scale output current of 10mA or 2.0V with  $200\Omega$  shunt resistor. An internal voltage reference source may be used to provide stable output independent of power supply fluctuations. Input coding is straight binary.

The DAC-341 is a low power device requiring only 30mA max. of +5V power supply current.

The DAC-341 is packaged in a 32-pin plastic QFP and operates over a -20°C to +70°C temperature range.

## INPUT/OUTPUT CONNECTIONS

PIN	FUNCTION	PIN	FUNCTION
1	BIT 7	17	I <sub>REF</sub>
2	BIT 6	18	S <sub>REF</sub>
3	BIT 5	19	V <sub>REF</sub>
4	BIT 4	20	+AV <sub>s</sub> (Analog)
5	BIT 3	21	+AV <sub>s</sub> (Analog)
6	BIT 2	22	VG
7	BIT 1 (MSB)	23	IO
8	NO CONNECTION	24	IO
9	CLK	25	AGND
10	BLK	26	NO CONNECTION
11	CE	27	DGND
12	NO CONNECTION	28	+DV <sub>s</sub> (Digital)
13	+DV <sub>s</sub> (Digital)	29	NO CONNECTION
14	VB	30	BIT 10 (LSB)
15	DGND	31	BIT 9
16	NO CONNECTION	32	BIT 8

Mechanical Dimensions  
Units: mm

ABSOLUTE MAXIMUM RATINGS ( $T_a = 25^\circ\text{C}$ )

PARAMETERS	SYMBOLS	LIMITS	UNITS
Supply Voltage	(+AV <sub>S</sub> , +DV <sub>S</sub> )	7	V
Input Voltage		-0.5 to +V <sub>S</sub>	V
Output Current		0 to 15	mA

## ELECTRICAL CHARACTERISTICS

(Typical at  $T_a = 25^\circ\text{C}$ ,  $+AV_S = +DV_S = +5\text{V}$ ,  $V_{REF} = 2.0\text{V}$ ,  $R = 200\Omega$ ,  $16R = 3.3\text{k}\Omega$  and  $F_S = 80\text{MHz}$  unless otherwise specified)

PARAMETERS	SYMBOLS	MIN.	TYP.	MAX.	UNITS
------------	---------	------	------	------	-------

## INPUTS

Digital Input Voltage	(V <sub>IH</sub> )	2.15	-	-	V
	(V <sub>IL</sub> )	-	-	0.85	V
Digital Input Current	(I <sub>IH</sub> )	-	-	5	µA
	(I <sub>IL</sub> )	-5	-	-	µA
Setup Time	(T <sub>S</sub> )	5.0	-	-	ns
Hold Time	(T <sub>H</sub> )	1.0	-	-	ns
Clock Pulse Width	(T <sub>PW1</sub> , T <sub>PW0</sub> )	6.25	-	-	ns
Voltage Reference	(V <sub>REF</sub> )	1.9	2.0	2.1	V

## OUTPUTS

Accuracy guaranteed Output					
Voltage Range	(V <sub>OC</sub> )	1.8	1.92	2.0	V
Full Scale Output Voltage	(V <sub>FS</sub> )	1.8	1.92	2.0	V
Full Scale Output Current	(I <sub>FS</sub> )	9.0	9.6	10	mA
S <sub>REF</sub> Output Voltage	(S <sub>REF</sub> )	1.0	-	1.3	V

## PERFORMANCE

Resolution		-	10	-	Bits
Conversion Rate	(F <sub>S</sub> )	80	-	-	MHz
Integral Linearity Error	(I <sub>IL</sub> )	-2.0	-	2.0	LSB
Differential Linearity Error	(D <sub>IL</sub> )	-0.5	-	0.5	LSB
Output Offset Voltage	(V <sub>OS</sub> )	-	-	1	mV
Propagation Delay Time	(T <sub>D</sub> )	-	10	-	ns
Glitch Energy	(@1V <sub>PP</sub> F.S.)	-	50	-	pV/s
Differential Gain		-	2.5	-	%
Differential Phase		-	1.3	-	deg

## POWER SUPPLY REQUIREMENTS

Supply Voltage	(+AV <sub>S</sub> , +DV <sub>S</sub> )	4.75	5.0	5.25	V
Supply Current	(I <sub>S</sub> )	-	-	30	mA
Power Dissipation	(P <sub>D</sub> )	-	-	150	mW

## ENVIRONMENTAL/PHYSICAL

Operating Temperature Range	-20	-	+70	°C
Storage Temperature Range	-55	-	+150	°C
Package			32-Pin Plastic QFP	
Weight			0.2	g

## Technical Notes

1. Separate the analog and digital signals around the device to reduce noise effects. Bypass the +AV<sub>S</sub> and +DV<sub>S</sub> terminals to the respective GNDs with a 0.1 µF ceramics capacitor placed as close to the pin as possible.

2. The DAC-341 is a current output D/A converter. To generate an output voltage, connect a 200Ω resistor to the current output terminal (Pin 24). See Typical Connections or calculate the output resistance from  $V_{FS} = I_{FS} \times R_1$ . Connect a resistance (R2) sixteen times the output resistance (R1) to the reference current terminal I<sub>REF</sub> (Pin 17). Note also that  $V_{FS} = V_{REF} \times 16R_1/R_2$ , and when connected directly to S<sub>REF</sub>,  $V_{FS} = S_{REF} \times 16R_1/R_2$ . Power consumption can be reduced by increasing the resistance, but this will also increase the glitch energy and output settling time. Choose the best values according to the application.

3. The S<sub>REF</sub> is an independent regulated voltage source. By connecting it to the V<sub>REF</sub> (Pin 19) a stable output, independent of power supply fluctuations, can be obtained. Note that connecting S<sub>REF</sub> to V<sub>REF</sub> changes the value of R2.

4. For the DAC-341 to provide the specified performance the data transmitted from outside and the clock must be synchronized properly. Adjust the setup time (T<sub>S</sub>) and hold time (T<sub>H</sub>) as specified.

5. The +AV<sub>S</sub> and +DV<sub>S</sub> Pins must use the same power supply. This is required to prevent latch up that may be caused by a potential difference between the two terminals when the power is turned on.

Table 1.Coding Table

Input Code MSB      LSB	Output Voltage (2V FS)
0000000000	0V
0000000001	0.002V
1000000000	1.000V
1100000000	1.500V
1111111111	1.998V

Timing Diagram

Figure 2.Typical Connection Diagrams

- 5.0V supply voltage ( $DV_s$  and  $AV_s$ )
- Digital input from Pins 30 to 32 and Pins 1 to 7
- Pin 18 is left open
- $R1 = 200\Omega$
- $R2 = 3.3k\Omega$
- $R3 = 3.0k\Omega$
- $R4 = 2.0k\Omega$
- $C = 0.1\mu F$

- 5.0V supply voltage ( $DV_s$  and  $AV_s$ )
- Digital input from Pins 30 to 32 and Pins 1 to 7
- $R1 = 200\Omega$
- $R2 = 2.0k\Omega$
- $C = 0.1\mu F$
