

Low Voltage, Dual DPDT and Quad SPDT Analog Switches

FEATURES

- Low Voltage Operation (1.8 V to 5.5 V)
- Low On Resistance
– $r_{DS(on)} : 6 \Omega @ 2.7 V$
- Low Voltage Logic Compatible
– DG2019: $V_{INH} = 1 V$
- High Bandwidth: 150 MHz
- QFN-16 Package

BENEFITS

- Ideal for Both Analog and Digital Signal Switching
- Reduced Power Consumption
- High Accuracy
- Reduced PCB Space
- Fast Switching
- Low Leakage

APPLICATIONS

- Cellular Phones
- Audio and Video Signal Routing
- PCMCIA Cards
- Battery Operated Systems
- Portable Instrumentation

DESCRIPTION

The DG2018 and DG2019 are low voltage, single supply analog switches. The DG2018 is a dual double-pole/double-throw (DPDT) with two control inputs that each controls a pair of single-pole/double-throw (SPDT). The DG2019 uses one control pin to operate four independent SPDT switches.

When operated on a +3-V supply, the DG2018's control pins are compatible with 1.8-V digital logic. The DG2019 has an available feature of a V_L pin that allows a 1.0-V threshold for the control pin when V_L is powered with 1.5 V.

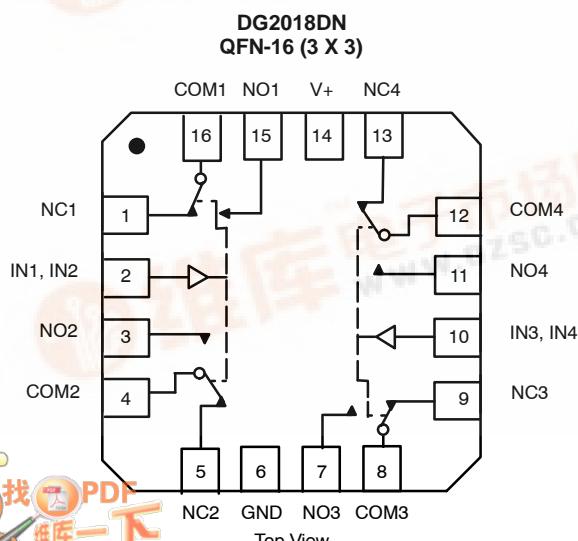

Built on Vishay Siliconix's low voltage submicron CMOS process, the DG2018 and DG2019 are ideal for high

performance switching of analog signals; providing low on-resistance ($6 \Omega @ +2.7 V$), fast speed ($T_{on}, T_{off} @ 42 ns$ and $16 ns$), and a bandwidth that exceeds 150 MHz.

The DG2018 and DG2019 were designed to offer solutions that extend beyond audio/video functions, to providing the performance required for today's demanding mixed-signal switching in portable applications.

An epitaxial layer prevents latch-up. Brake-before-make is guaranteed for all SPDT's. All switches conduct equally well in both directions when on, and blocks up to the power supply level when off.
