DESCRIPTION

The DS4802 BiCMOS dual operational amplifier combines low input offset voltage, very low power consumption, rail-to-rail output swing, and excellent DC precision. With a maximum input offset voltage of 0.95 mV, a maximum I_{DD} of 25 μ A/amplifier, and 10 pA typical input bias current, the DS4802 is ideal for measurement, medical, and industrial applications. The DS4802 is also ideal for portable applications with 1.8 volt to 5.5 volt single supply voltage operation and low power consumption.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, V_{DD} (see Note 1)	5.5V
Differential Input Voltage (see Note 2)	$\pm V_{DD}$
Input Voltage Range, V_I (see Note 1)	-0.3V to V_{DD}
Input Current, I_{DD}	± 4 mA
Output Current, I_O	± 50 mA
Total current into V_{DD}	± 50 mA
Total current out of GND	± 50 mA
Duration of short-circuit current (See Note 3)	unlimited
Operating Temperature	0°C to 70°C
Storage Temperature	-55°C to +125°C
Soldering Temperature	260°C for 10 seconds

Notes:

1. Relative to GND.
2. Non-inverting input relative to inverting input. Excessive current flows when input is brought below GND - 0.3V.
3. The output may be shorted to either supply. Temperature and/or supply voltages must be limited to ensure that the maximum dissipation rating is not exceeded.
